Man Funds plc

Investment Managers' reports

Performance table

For each of the sub-funds that form a part of Man Funds plc, details of their performance returns during the financial period ending 30 June 2026 are tabulated below.

The individual share classes for which we have reported the performance figures on this page have been selected by the respective investment managers, as their investment manager commentaries throughout this section of the financial statements best reflect the performance of these particular share classes.

To an extent, the investment managers' reports also incorporate their views and analysis on the other share classes belonging to their portfolios, however the performance return for these other share classes during the financial period may differ to what is reported in this sub-section of the unaudited financial statements.

For any sub-funds which launched part way throughout the financial period, the information tabulated below represents performance from the date of launch to 30 June 2026:

Sub-fund	Share class	Share Class Return	Benchmark	Benchmark(s) Return
Man Global Convertibles	Man Global Convertibles Class IM USD	8.76%	FTSE Global Focus Convertible Bond Hedged (USD) Index	8.57%

Market Summary¹

The first half of 2026 was defined by sharp contrasts, extraordinary volatility, geopolitical shock and the continued dominance of the Artificial Intelligence (AI) infrastructure theme. The period began with a powerful risk-on rally²: January saw the S&P 500, the equity index which tracks the largest US companies, briefly breach 7,000, with convertibles³ delivering their best start to a year on record. February continued positively, though violent rotation was underway beneath the surface as the Mag7⁴ trade stalled and capital rotated into small-cap and value sectors⁵ where convertible issuers are heavily concentrated. The quarter turned sharply in March as US and Israeli strikes on Iran disrupted the Strait of Hormuz, sending the Brent crude oil price surging 63% and triggering a simultaneous sell-off in equities and bonds. The second quarter brought a dramatic reversal. April delivered the strongest monthly performance on record for the asset class as AI optimism and a robust earnings season drove a broad risk-on⁶ rally, with the S&P 500 rising strongly. May extended the gains before June saw markets consolidate as investors repriced for a higher-for-longer (in terms of US interest rates) Federal Reserve. Against this backdrop, convertible bonds delivered strong returns, outperforming global fixed income and demonstrating the asset class's core asymmetric characteristics — participating meaningfully in the equity upside of the issuing companies while capturing materially less of the March drawdown. The primary (new issue) market was a defining feature of the period, with global bond issuance reaching record levels driven overwhelmingly by AI infrastructure financing needs, further improving the quality and diversification of the convertible universe.

Performance Review

The Fund delivered a total return of 8.76%⁷ over the period, compared to the benchmark index which returned 8.57%⁸. Stock selection and sector attribution (which takes into account the effects of not investing in a stock or sector as well as for those being invested in) contributed positively to returns over the first six months of the year, while market attribution detracted slightly. On a regional basis, gains were led by stock selection in Asia and the US while overall positioning in Asia detracted slightly. On an overall sector basis, gains were led by stock selection and positioning in Technology and Utilities as well as stock selection in Materials. Conversely, positioning and stock selection in Consumer Discretionary detracted, as did a broad index hedge. On a relative basis, the top performing single name contributors were led by an overweight relative to the index weighting in Wiyynn Corp, which benefited from sustained AI infrastructure spending and strong earnings, and an overweight in Palo Alto Networks, which continued to demonstrate the resilience of cybersecurity infrastructure demand throughout the period. Key detractors included an underweight in Rohm, which outperformed as the company shifted its narrative from commodity auto parts toward higher-value AI compute infrastructure, an underweight in Onto Innovation as semiconductor capital equipment demand remained resilient, and an underweight in Ultra Clean Holdings. Global convertible bond new issuance totalled approximately US\$138bn in the first half of 2026, led by the US (\$90bn) and Asia, running at more than double the pace of the same period in 2025 and firmly on course to exceed US\$200bn by year-end. June alone saw a landmark US\$44.8bn of new issuance – the highest monthly total ever recorded – anchored by Alphabet's US\$19.3bn mandatory convertible preferred offering.

Investment Managers' reports (continued)

Man Global Convertibles – Semi-Annual Report Commentary (continued)

Future Outlook

In our view, convertible bonds continue to present an attractive investment opportunity following a strong and eventful first half. The AI infrastructure capital expenditure (capex) cycle remains the dominant demand driver, with hyperscalers (the very large cloud service providers) now active convertible bond issuers and AI-linked names comprising over 30% of the global market. Rising dispersion⁹ within the theme – as signals around monetisation timelines and capex discipline become more nuanced – creates a dynamic that looks to reward active single-name management over passive index exposure. A higher-for-longer interest rate environment supports more meaningful bond coupons, robust issuance volumes, and enhanced embedded option values, while the primary new issuance pipeline remains deep with over US\$150bn of convertibles requiring refinancing across 2026–2027. Key risks include persistent geopolitical uncertainty, elevated market valuations, AI theme concentration and narrow credit spreads¹⁰. However, the market's demonstrated asymmetric return characteristics and record-quality primary universe provide a constructive platform for the second half.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man Japan CoreAlpha Equity – Semi-Annual Report Commentary

Market Summary¹

The period under review saw the Japanese market extend its remarkable run, setting a succession of all-time highs and marking the strongest start to a year for the broad-market TOPIX Index² since 1988. The rally was driven by heightened enthusiasm around artificial intelligence (AI), the election of a market-friendly, pro-growth Prime Minister in Sanae Takaichi, and a more aggressive stance from the Bank of Japan.

Beneath the headline strength, however, the market was exceptionally narrow. Leadership was dominated by AI and by momentum, meaning stocks that had already risen sharply, continuing the trend of recent years in which investors have favoured the same small collection of winners. This narrowness reached historic extremes: according to Morgan Stanley's factor indices³, the April to June quarter set a 19-year record for the outperformance of momentum over value, more than double the previous peak set in early 2020. Whilst the Russell/Nomura Large Cap Value Index performed well, this too was driven by a handful of momentum-driven top cap stocks such as the megabanks and the trading houses, while more traditional value sectors such as steels, shipping and chemicals remained depressed.

The macro and political backdrop was eventful. In February 2026, the LDP-Japan Innovation Party coalition secured a historic victory in a Lower House snap election, bringing long-awaited political stability and a clearly pro-growth agenda. In March, a developing conflict in the Middle East saw a sharp rise in the oil price and global markets fell from their highs, though the market subsequently recovered strongly, with the Nikkei 225 Index breaking 60,000 for the first time in April and reaching 72,000 by late June. The Bank of Japan, meanwhile, continued its slow path of normalisation, delivering a widely expected interest rate hike to 1.0% in June and striking a hawkish⁴ tone. Even so, the market had hoped for more, and the yen depreciated to its weakest level against the dollar in four decades; even the reported Ministry of Finance intervention of close to US\$74 billion proved short-lived. In our view, the Bank of Japan remained behind the curve⁵ throughout the period.

Performance Review

Over the period 1 January 2026 to 30 June 2026, Man Japan CoreAlpha Equity (the "Fund") returned 12.27%⁶. This compares with returns of 18.56%⁷ from the Tokyo Stock Price Index (TOPIX) and 16.85%⁸ from the Russell/Nomura Large Cap Index over the same period (all figures in Japanese yen, net total return terms).

As contrarian, value investors, we seek out good-quality companies that are unloved and trading below what we consider their true worth, rather than following the crowd. The Fund lagged the market over the period, reflecting a rally concentrated in the expensive, momentum-driven stocks that our disciplined valuation approach leads us to avoid.

The largest positive contribution came from the overweight (relative to the benchmarks) to financials, an out-of-favour, attractively valued area when the position was built, which performed strongly as the domestic deflation trade, in which a recovering economy lifts prices and growth, took hold. Valuations did not appear extended, and the banks were joined by the insurers and the security brokers, the latter supported by the bull market and a gradual shift in Japanese households from cash to investing. Overweights to other deflation beneficiaries also helped, including the machinery sector and the trading houses, consistent with the Fund's focus on real, asset-heavy businesses. At the stock level, Sumitomo Mitsui Trust, Mizuho Financial, Dai-ichi Life and ORIX were among the notable contributors.

Relative returns were principally held back by the Fund's near-total absence of the AI and semiconductor names that led the market. As that rally reasserted itself with exceptional force in the second quarter, our significant underweight position here was the largest drag on performance. The overweight to autos, among the most unloved corners of the market, where consolidation has been slow and tariff uncertainty persists, also detracted, with Nissan and Honda the notable individual detractors.

We continued to manage the portfolio in the Fund's usual contrarian fashion, taking profits where optimism appeared excessive, including complete exits from SoftBank Group and Yaskawa, and later trims of strong-performing technology names such as Kyocera and Panasonic, and redeploying into laggards and attractively valued areas. We added to quality technology franchises we believe have been sold off excessively on fears of AI disruption: Nintendo and Sony, both of which own valuable and durable intellectual property, and the IT services names NEC and Fujitsu, where the structurally outsourced nature of Japan's IT market underpins a far deeper pipeline of business than the market implies. We also extended the Fund's 'HALO' theme, Heavy Assets, Low Obsolescence, into defence, energy and infrastructure, through names such as Mitsubishi Heavy Industries and Hitachi.

Investment Managers' reports (continued)

Man Japan CoreAlpha Equity – Semi-Annual Report Commentary (continued)

Future Outlook

Outside of financials, the Fund continues to have little active exposure to the momentum and crowding that has come to dominate the market. As always, rotation and mean reversion within the equity market should therefore continue to be beneficial for the Fund.

The structural case for Japan remains intact, built on domestic reflation, a tailwind of corporate governance reform and improving capital efficiency. Yet we believe the strength of the headline index is masking an increasingly two-track market. Should enthusiasm for AI and the uncertainties in the Middle East fade, the market's focus may well return to the domestic Japan story that drew investors here in the first place.

We remain optimistic on the areas of the market that should benefit from a reflating domestic economy, rising domestic interest rates and a stronger yen, including the financials and asset-heavy domestic businesses. Real assets remain appealing, and Japan's conglomerates look well positioned for the HALO trade, favouring companies underpinned by tangible, capital-heavy assets that are resilient to AI disruption. We continue to find opportunity in unfashionable parts of the market, including the auto sector and other quality businesses that we feel have sold off excessively.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Market summary¹

Global equities navigated a turbulent first half of 2026, shaped by two dominant and at times conflicting themes: artificial intelligence (AI)-driven optimism and geopolitical risk. The first quarter was marked by meaningful volatility, with developed markets declining, the S&P 500 Index measuring the largest US stocks fell -4.33% and the MSCI World Index (which measures the performance of global equities as a whole) dropped -3.57%, as enthusiasm for mega-cap technology stocks gave way to concerns around AI's disruption to traditional software business models. European stock markets declined modestly during the first quarter of 2026, reversing course after several quarters of strength. A sharp late-quarter spike in oil prices, with Brent crude surging in March following the effective closure of the Strait of Hormuz, amplified risk-off sentiment (a general move away from riskier assets) and reignited inflation fears globally. Emerging markets proved more resilient, with the MSCI Emerging Markets Index falling just -0.17%, though performance was uneven: Taiwan and Korea benefited early from AI and semiconductor tailwinds, while broader emerging markets faced headwinds from Asia's outsized exposure to Middle East energy flows. The Q1 factor environment reflected this dynamic, with a textbook oil-shock rotation that led investors to sell shares that tend to move more sharply than the wider market, along with those that had recently been rising, and to buy cheaper shares and those paying higher dividends, though the overall factor² backdrop remained broadly constructive.

Q2 saw a dramatic reversal of Q1's conflict-driven selloff, with global equities staging one of their strongest multi-month rallies in recent years as Middle East tensions eased and markets rotated decisively back into AI and technology stocks. The MSCI World Index advanced +13.8% for the quarter, although returns were front-loaded before momentum faded into June. During the second quarter the S&P 500 Index gained 15.2%, the MSCI Europe Index returned 11.8% in euro terms, and the MSCI Emerging Markets Index surged over 24%, powered by Taiwanese and Korean semiconductor names. Oil prices fell sharply in May as Iran tensions eased, alleviating inflationary pressure, though June brought a modest pause amid fresh Middle East flare-ups and growing skepticism over AI capital expenditure returns. Factor leadership shifted emphatically pro-risk (favouring higher-risk assets), with beta (the overall movement of the market), size, growth and momentum all strongly positive, in sharp contrast to Q1's defensive rotation.

Performance review

For the six-month period ending June 30, 2026, the Man Funds plc - Man Systematic Emerging Markets Equity Fund (the 'Fund') returned 30.91% net-of-fees and outperformed its benchmark³, the MSCI Emerging Markets Index, which returned 23.85%⁴.

Model performance

The overall model performance was positive during the year-to-date period. Within the overall model, the Factor Selection, Momentum Academic+, Momentum Innovation, Informed Investor, and Value Academic+ models performed positively during the period. The Quality model was flat. The Value Innovation model performed negatively during the year-to-date period.

Contribution breakdown

From a sector perspective, stock selection was positive during the year-to-date period, with holdings in the Information Technology and Communication Services sectors contributing. Sector allocation was positive for the year-to-date period, with an underweight (holding a smaller proportion than the benchmark) to Consumer Discretionary and an underweight to Financials contributing.

Stock selection was positive from a country perspective, with holdings in Taiwan and China (onshore) contributing. Country allocation was positive for the half-year period, with an overweight to South Korea and an underweight to China (offshore) contributing.

At the security level, an underweight in a Taiwanese Information Technology stock was the largest positive contributor during the year-to-date period, while an underweight in a South Korean Industrials stock was the largest detractor.

Future outlook

We expect ongoing geopolitical dynamics to continue to shape the market environment and factor landscape. Our attention centers on potential threats that could disrupt equity markets. The question of an artificial intelligence bubble will undoubtedly persist as a key concern for investors. As we do not invest based on top-down views and instead focus on company-specific, bottom-up stock selection, we strive to remain agnostic to the overall market environment by focusing on continuous research into new, diversifying signals and risk management techniques. Our goal, as always, is to build balanced, well-diversified portfolios that can navigate market inflections and volatility. With this in mind, we will not rest on our laurels but instead remain focused on improving our process to best manage the risks, known and unknown, that lie ahead.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Market Summary

Emerging market local-currency bonds returned 1.5% in US dollar terms during the first half of 2026, with gains made mainly in the second quarter¹. Income earned from the bonds supported returns, while currency movements and changes in bond prices caused by interest-rate movements reduced returns. Colombia, Hungary and Brazil were among the strongest markets, while Indonesia and Thailand were among the weakest.

Market conditions changed significantly during the period. Initially, a weaker US dollar and strong investor demand supported emerging market currencies and bonds. The disruption to shipping through the Strait of Hormuz then pushed oil prices higher and encouraged investors to reduce emerging market investments. The subsequent US-Iran ceasefire helped restore confidence. However, some of this improvement was reversed near the end of June when the US Federal Reserve maintained a cautious position on interest rates, strengthening the dollar and reducing some emerging market gains.

Central banks responded differently to the rise in oil prices. Brazil, Mexico, Hungary and Poland reduced interest rates, while India, China, Turkey and Malaysia kept rates unchanged. Colombia, Indonesia, South Africa and the Czech Republic raised interest rates to support their currencies or manage inflation pressures.

Emerging market local-currency bond funds received US\$14.7 billion of net investment during the period, compared with US\$12.2 billion for hard-currency bond funds. Hard-currency bonds are issued in widely traded currencies such as the US dollar rather than the issuer's local currency².

Positioning

During the first half of 2026, we moved the Fund from a cautious position to a moderately more positive view on emerging market currencies and bonds. By the end of June, the Fund held slightly more interest-rate exposure and more emerging market currency exposure than its benchmark.

Within currencies, we favoured the Chinese yuan, Malaysian ringgit, Taiwan dollar and South Korean won. These currencies appeared attractively valued and were supported by strong trade balances. We held more cautious views on the Turkish lira, Indian rupee, Chilean peso and South African rand because of country-specific economic and political risks.

We also adjusted several positions as market conditions changed. We closed cautious positions in the Brazilian real and Israeli shekel and later closed positions linked to the Hungarian forint, Colombian peso and Indonesian rupiah.

Within bond markets, we favoured Mexico, Brazil, Malaysia and Colombia, where interest rates remained relatively high and offered attractive income. We remained cautious about lower-yielding markets such as China and Thailand, where the available income provided less protection against potential risks.

Performance Review

Against this backdrop, Man Global Emerging Markets Local Currency Rates returned 0.18%³ over the period, underperforming the benchmark which returned 1.52%⁴.

The main losses came from cautious positions in the Mexican peso, Colombian peso and Hungarian forint, as these currencies strengthened. Positions linked to the Israeli shekel and Indonesian rupiah also reduced returns. Positive contributions came from bond positions in Mexico, Thailand and Colombia, as well as cautious positions in the Turkish lira, Chilean peso and Colombian peso at different points during the period. Positions in the Taiwan dollar and South Korean won also supported returns after the rise in oil prices eased.

⁴ Bloomberg as at 30 June 2026.

Outlook

At its meeting on 29 July, the US Federal Reserve was unusually divided, with three members voting to raise interest rates. This suggested that US interest rates could remain higher for longer, creating a more uncertain environment for emerging markets. A relatively stable US dollar and lower oil prices provided some support, although geopolitical risks remained.

Emerging market currencies can still provide income, but we do not expect them all to strengthen significantly while the US dollar remains firm and many investors already hold similar positions. We see better value in parts of emerging Asia, supported by attractive currency valuations and strong trade balances. The Mexican peso could weaken because of uncertainty surrounding the United States-Mexico-Canada trade agreement, while the Colombian peso appears expensive following its recent rise. The South African rand remains sensitive to energy and metals prices, while the Turkish lira continues to face political and geopolitical risks.

Interest-rate conditions vary between regions. We favour bond markets in Mexico, Brazil, Colombia and Malaysia, where yields have already risen and offer relatively attractive income. We are more cautious about lower-yielding Asian markets, where inflation, government spending pressures and further interest-rate increases could cause bond yields to rise further and prices to fall.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man Funds plc

Investment Managers' reports (continued)

Man Global Emerging Markets Bond – Semi-Annual Report Commentary

Market Summary¹

The first half of 2026 was dominated by two major geopolitical events, but despite this, global risk assets² held up well overall. In January, a US military operation captured Venezuelan President Nicolás Maduro, raising hopes of political change and debt relief for the country. From late February, a US-Israeli-led campaign against Iran disrupted a key oil shipping route through the Strait of Hormuz for around two and a half months, before a ceasefire in June eased the situation. Oil prices rose sharply during the conflict before falling back, ending the period higher than where they started but well below their peak.

Against this backdrop, the broader economic picture stayed calm. The US Federal Reserve (Fed) kept interest rates on hold, as US growth held up and inflation gradually eased. Movements in the US dollar were the single biggest influence on demand for emerging market (EM) bonds.

Late in the period, comments from new Fed Chair Kevin Warsh were read as hawkish³, leading markets to expect further interest rate rises by year-end. Overall, the first half of 2026 was a carry-versus-duration tug-of-war⁴: income from tighter credit spreads⁵ was the main driver of gains.

High Yield (HY)⁶ bonds significantly outperformed higher-quality Investment Grade (IG) bonds, with the riskiest, lowest-rated bonds delivering the strongest returns. Performance varied widely by country: Venezuela, Ukraine, and Gabon were among the strongest performers, while a small number of countries, including Senegal and Bahrain, saw negative returns. By region, Latin America, Africa, and Europe outperformed, each helped by positive local developments. Asia and the Middle East lagged, in part due to a heavy amount of new bond issuance, with both regions among the largest issuers over the period.

Latin America was led by Venezuela, Argentina, and Colombia. Venezuela's bonds rallied after the Maduro capture raised the odds of debt restructuring, a shift reinforced by US regulatory easing (OFAC⁷) and renewed engagement with the IMF. Argentina benefited from credit rating upgrades, record exports, and a new investment framework designed to support economic growth. Colombia rallied after a market-friendly election result. The region overall showed resilience to the global energy shock, with limited impact on inflation or growth.

Africa broadly underperformed, with gains limited to a handful of countries recovering from previous debt restructurings, such as Ghana and Republic of Congo. Most of the region, however, was flat or weaker, weighed down by specific local pressures including fiscal concerns in Senegal and Kenya, ongoing financial distress in Gabon, and swings in oil prices affecting Angola and Nigeria.

Europe was led by Ukraine and Hungary. Ukraine's bonds rose on growing hopes of a ceasefire and substantial financial support from the EU and IMF. Hungary rallied after an election result seen as more EU-friendly, unlocking billions of euros in EU funding and supporting bond prices more broadly across the region.

Investors continued to put money into emerging market bonds over the first half of the year.⁸ That said, demand for newly issued bonds began to soften in June, the first sign of cooling since February.⁹

Governments in emerging markets issued a record amount of new bonds over the period, well above the same point last year. Notably, several countries that had previously struggled to borrow, including Ecuador, Angola, Kenya, and Egypt, successfully returned to international bond markets. Issuance was strongest in the spring, supported by a weaker US dollar and easing US interest rates, before slowing somewhat by June as investor demand began to cool.¹⁰

Positioning

As of 30 June 2026, the Fund held less interest rate risk and less credit risk than its benchmark, meaning the Fund's returns would be expected to move by less than the benchmark's if interest rates or credit spreads changed. Specifically, the Fund's duration-weighted exposure (DWE)¹¹ to interest rates was 0.8 years lower than the benchmark's (improved from a 1.4-year shortfall at the start of the period), and its DWE to credit spreads was 1.3 years lower than the benchmark's (improved from 1.8 years), split between a 0.9-year shortfall in investment grade bonds and a 0.4-year shortfall in high yield bonds. The portfolio held 8.1% of its assets in the Middle East and Gulf Cooperation Council (GCC) regions, compared with a 17.6% weighting in the benchmark, which we believe is appropriate given current valuations and continued geopolitical risk in the region.

The Fund held a position in US Treasury bonds (US government bonds not included in the benchmark) equivalent to 0.6 years of interest rate exposure (up from 0.4 years at the start of the period). This helped balance out the Fund's smaller-than-benchmark exposure to expensive investment grade bonds from Asia and the Middle East/GCC region. We added to this US Treasury position in April, after US government bond yields had risen sharply over the previous two months (by 46 basis points, or 0.46 percentage points) — a bigger move than the improvement seen in emerging market bond risk premiums (known as "spreads") over the same period — and because, in our view, US Treasury yields better reflected ongoing inflation, political, and global growth risks.

¹ Bloomberg as at 30 June 2026.

² A risk asset is any investment with significant price volatility, where the expected return differs from the actual return. Common examples include stocks, commodities, high-yield bonds, real estate, and currencies, which are generally riskier than cash or government bonds.

³ Hawkish: favouring higher interest rates and tighter monetary policy, typically to help control inflation.

⁴ Carry refers to the income return earned from holding a bond, primarily from its yield; duration refers to a bond's sensitivity to changes in interest rates. The 'carry-versus-duration tug-of-war' describes how income gains from tighter credit spreads were offset by price losses as global interest rates rose.

⁵ Credit Spread: The additional interest rate investors require for holding corporate bonds versus safer government bonds like US Treasuries.

⁶ The High Yield market covers bonds rated below BBB- by credit ratings agencies, reflecting their relatively higher risk of default compared with Investment Grade (IG).

⁷ OFAC (the Office of Foreign Assets Control): a bureau of the US Treasury Department that administers and enforces US economic and trade sanctions.

Man Global Emerging Markets Bond – Semi-Annual Report Commentary (continued)

Positioning (continued)

Notable exposure moves included:

Colombia: In May, we increased the Fund's credit exposure to Colombia, moving the position from a slight underweight to a small overweight relative to the benchmark. We took advantage of Colombian bonds trading more cheaply than the level at which we had sold some of the Fund's Colombian bonds back to the issuer at the end of April, through a tender offer.

Abu Dhabi: We gradually exited Abu Dhabi over the period, driven by a deteriorating geopolitical backdrop, including the closure of the Strait of Hormuz, as well as weakening technicals as the country phased out of the benchmark from March month-end over the following four months.

Latin America: We redeployed proceeds into Latin American credits (bonds), which we view as better positioned from both a regional and commodity standpoint given the Middle East conflict. This included increasing overweights relative to the benchmark index in Mexico, Brazil, and Ecuador, trimming the underweight in the Dominican Republic on improved relative value, and adding to Argentina to close the underweight for that country.

Poland: We increased the Fund's exposure to Polish bonds, as Polish bond yields moved higher in line with US interest rates. This brought the Fund's position in Poland to a small overweight relative to the benchmark, although the Fund remains underweight to the broader European region overall.

Performance Review

Against this backdrop, Man Global Emerging Markets Bond ("the Fund") returned 2.20% over the period, underperforming the benchmark which returned 2.85%.¹² The main reason the Fund underperformed was that it held less exposure than the benchmark to the lowest-rated, highest-risk bonds in the high yield market — specifically CCC-rated bonds (+15.6%) and bonds rated below CCC (+35.9%) — which were the best-performing part of the market over the period. This was only partly offset by a separate, positive effect: because the Fund also held less exposure than the benchmark to interest rate risk, it benefited as underlying government bond yields rose during the period.

At the country level, the biggest drag on relative performance was the Fund's underweight position in Venezuela, which was the best-performing country in the market over the period. While relations with the IMF and World Bank have improved, we believe the path to a full debt restructuring will be long and uneven, and current prices already reflect a lot of good news. Indeed, Venezuela's bonds fell back in June, the weakest month for that market. Other, smaller detractors included the Fund's underweight in Ukraine and stock selection in Chile.

At the country level, the biggest drag on relative performance was the Fund's underweight position in Venezuela, which was the best-performing country in the market over the period. While relations with the IMF and World Bank have improved, we believe the path to a full debt restructuring will be long and uneven, and current prices already reflect a lot of good news. Indeed, Venezuela's bonds fell back in June, the weakest month for that market. Other, smaller detractors included the Fund's underweight in Ukraine and stock selection in Chile.

¹² The official NAV released for 30 June 2026 was approximately 0.30% overstated due to the Administrator applying incorrect pricing. As there was no investor dealing on that date, no further action was required, and the difference was reinstated the following day. The attribution figures are not affected by this issue, as they are based on Man Group's internal numbers. Performance data is shown net of fees with income reinvested, as at 31 December 2025, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 1.25% management fee for the D C USD share class. Other share classes may charge higher fees. J.P. Morgan EMBI Global Composite Index is the reference benchmark for the Fund. Please consult the Fund's offering documents or Key Information Document ('KID') or Key Investor Information Document ('KIID') for more information.

Man Global Emerging Markets Bond – Semi-Annual Report Commentary (continued)

Future Outlook

The broader economic backdrop remains resilient but is losing some momentum. Emerging market economies are now expected to grow only modestly faster than developed markets this year, a smaller gap than previously forecast, while the Fed's more hawkish stance is adding further pressure by prompting some emerging market central banks to raise interest rates defensively. Performance across regions has been mixed: Northeast Asia has outperformed, helped by strength in technology-related sectors, while Gulf Cooperation Council nations have lagged.

We maintain defensive views on the GCC, Turkey, and Egypt given valuations reflect much of the positive news around the US-Iran memorandum of understanding despite ongoing uncertainty in the region, while favouring Latin America on a relative basis. We see better entry points for weaker high-yield credits emerging over coming months.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man Pan-European Equity Growth – Semi-Annual Report Commentary

Market summary¹

The first quarter of 2026 began with European equity indices extending last year's strong gains, buoyed by continued capital inflows into the region. Solid macroeconomic data was reported, with the US economy recording strong annualised growth in the third quarter of 2025, while the German economy finally returned to positive growth after two consecutive years of negative growth.

February saw markets continue to advance, though a sharp divergence emerged beneath the surface. Investors increasingly rewarded and punished stocks based on their perceived exposure to artificial intelligence (AI)-led disruption, triggering a pronounced sell-off across knowledge-based industries including software, data and business services. Geopolitical risk escalated sharply late in the month, with the launch of a US-led attack on Iran on 28 February.

March was defined by the consequences of that escalation. The US-Israeli strikes on Iran and the effective closure of the Strait of Hormuz triggered a surge in energy prices and a broad sell-off in riskier assets as markets sought to price in the inflationary consequences of the conflict and the negative implications for economic growth.

Performance review

The Fund stopped trading on 21 April 2026 for commercial reasons. As of that date, the Fund was down 2.2%², just over 6 percentage points behind the benchmark, MSCI Europe index³, for the year. The period was characterised by three distinct phases: a near-flat January (+0.08%) where stock selection primarily drove an approximate 3% shortfall, a modestly positive return of +1.0% in February where performance dispersion⁴ within the portfolio weighed on relative returns, and a sharply negative March (-9.23%) where the Fund's zero exposure to energy and above index weightings in Consumer Discretionary and Industrials proved the primary headwind against a backdrop of surging oil prices and broad risk-off⁵ sentiment.

The portfolio's holding in semiconductor and software design company Arm was the largest contributor over the period. Arm published strong third quarter numbers, led by royalty growth. AI's requirement for more powerful but energy efficient compute is resulting in growing demand for Arm-based CPUs. Dutch semiconductor supply chain company ASML was another significant contributor, following fourth quarter results that exceeded expectations. Most striking was the company's record net order intake⁶ in the fourth quarter which, at Eur. 13.2 billion, was double the number expected by consensus opinion. The intake reflected a notable shift in customer behaviour towards a much more confident outlook in the sustainability of AI-related demand. Budget airline Ryanair was the leading detractor as its share price suffered in response to the war and the threat of disruption relating to jet fuel supply. Despite soundly beating revenue expectations in its fourth quarter results, and vision care company EssilorLuxottica's share price continued to retreat from the all-time high of mid-November given the market's nervousness that the wholesale skew (a shift in sales mix toward the lower-margin wholesale channel) would impact profitability.

¹ Bloomberg/Man Group as at 21 April 2026.

² Performance data is shown net of fees with income reinvested, as at 21 April 2026, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated for Pan-European Equity Growth Class I C EUR share class. Other share classes may have charged higher fees. MSCI Europe is an official benchmark for the fund. Please consult the Fund's offering documents/ Key Investor Information Document ('KIID')/ Key information Document ('KID') for more information.

³ Bloomberg as at 21 April 2026.

⁴ Performance dispersion refers to the extent to which returns on individual holdings within the portfolio vary from one another, rather than moving in line with each other.

⁵ A market environment where investors move money away from riskier investments (like stocks) into safer ones (like government bonds).

⁶ Net order intake is the value of new customer orders received in the period, after deducting any cancellations.

Investment Managers' reports (continued)

Man Systematic Europe – Semi-Annual Report Commentary

Market summary¹

Global equities navigated a turbulent first half of 2026, shaped by two dominant and at times conflicting themes: Artificial Intelligence ('AI')-driven optimism and geopolitical risk. The first quarter was marked by meaningful volatility, with developed markets declining, the S&P 500 Index measuring the largest US stocks fell -4.33% and the MSCI World Index (which measures the performance of global equities as a whole) dropped -3.57%, as enthusiasm for mega-cap (the largest companies by market value) technology stocks gave way to concerns around AI's disruption to traditional software business models. European stock markets declined, with the MSCI Europe Index falling 1.3%, reversing course after several quarters of strength. A sharp late-quarter spike in oil prices, with Brent surging in March following the effective closure of the Strait of Hormuz, amplified risk-off sentiment (a general move away from riskier assets) and reignited inflation fears globally. Emerging markets ('EM') proved more resilient, with the MSCI Emerging Markets Index falling just -0.17%, though performance was uneven: Taiwan and Korea benefited early from AI and semiconductor tailwinds, while broader EM faced headwinds from Asia's outsized exposure to Middle East energy flows. The Q1 factor environment (factors are outcomes provided by algorithmic models which undertake mass data analysis) reflected this dynamic, with a textbook oil-shock rotation that led investors to sell shares that tend to move more sharply than the wider market, along with those that had recently been rising, and to buy cheaper shares and those paying higher dividends, though the overall factor backdrop remained broadly constructive.

Q2 saw a dramatic reversal of Q1's conflict-driven selloff, with global equities staging one of their strongest multi-month rallies in recent years as Middle East tensions eased and markets rotated decisively back into AI and technology stocks. The MSCI World Index advanced +13.8% for the quarter, although returns were front-loaded before momentum faded into June. During the second quarter the S&P 500 Index gained 15.2%, the MSCI Europe Index returned 11.8% in euro terms after falling 1.3% in the first quarter and the MSCI Emerging Markets Index surged over 24%, powered by Taiwanese and Korean semiconductor names. Oil prices fell sharply in May as Iran tensions eased, alleviating inflationary pressure, though June brought a modest pause amid fresh Middle East flare-ups and growing scepticism over AI capital expenditure returns. Factor leadership shifted emphatically pro-risk (favouring higher-risk assets), with beta (the overall movement of the market), size, growth and momentum all strongly positive, in sharp contrast to Q1's defensive rotation.

Performance review

For the six-month period ending June 30, 2026, the Fund returned 15.72%² net-of-fees and outperformed its benchmark, the MSCI Europe Index, by 4.97%³.

The Fund employs a computerised fully systematic process utilizing quantitative analysis, producing outcomes derived via algorithmic analysis of mass data. Overall model performance for the Fund was positive for the year to date, with mixed performance from the models (the quantitative models used to select investments). The Industry Dynamics model was the most positive, followed by the Long-Term Focus and Valuation models. The Earnings Quality and Business Risk models detracted.

From a sector perspective, stock selection and sector allocation were positive. Stock selection within the Industrials and Materials sectors contributed the most, while selection within Information Technology and Financials sectors detracted the most. Within sector allocation, an overweight (holding more of a stock or sector than the benchmark does) to the Information Technology sector contributed to performance.

From a country perspective, positive stock selection contributed to returns. Most notable was the negative selection in Germany and France. The Fund's country allocation was also positive, however to a lesser extent than selection, with an overweight in Finland contributing to performance.

From an individual stock standpoint, the Fund's overweight holdings in a French IT firm, an overweight to a German IT firm and an overweight to a Netherlands IT company were the most significant contributors. The three stocks that detracted the most from performance were underweights (holding less of a stock than the benchmark does) in a different Netherlands IT firm, an overweight to a Swiss Financials firm and an overweight to a French IT company.

¹ Bloomberg as at 30 June 2026.

² Performance data is shown net of fees with income reinvested, as at 30 June 2026, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 1.40% management fees for the D C EUR share class. Other share classes may charge higher fees. Please consult the Fund's offering documents/ Key Information Document ('KID') for more information.

Man Systematic Europe – Semi-Annual Report Commentary (continued)

Future Outlook

We expect ongoing geopolitical dynamics to continue to shape the market environment and factor landscape. Our attention centers on potential threats that could disrupt equity markets. The question of an AI bubble will undoubtedly persist as a key concern for investors. As we do not invest based on top-down views and instead focus on company-specific, bottom-up stock selection, we strive to remain agnostic to the overall market environment by focusing on continuous research into new, diversifying signals and risk management techniques. Our goal, as always, is to build balanced, well-diversified portfolios that can navigate market inflections and volatility. With this in mind, we will not rest on our laurels but instead remain focused on improving our process to best manage the risks, known and unknown, that lie ahead.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Factor leadership shifted emphatically pro-risk, with beta, size, growth and momentum all strongly positive, in sharp contrast to Q1's defensive rotation.

Performance review

For the six-month period ending June 30, 2026, Man Systematic China A Equity (the 'Fund') returned 21.29%⁴ net-of-fees and outperformed its benchmark, the MSCI China A Index which returned 14.79%.

Model Performance⁵

The overall model performance was positive during the year-to-date period. The Factor Selection, Momentum Academic+, Value Innovation, Momentum Innovation, Informed Investor, and Quality models performed positively during the period. The Value Academic+ model performed negatively during the year-to-date period.

Contribution breakdown

From a sector perspective, stock selection was positive during the year-to-date period, with holdings in Information Technology and Materials contributing. Sector allocation was positive for the year-to-date period, with an underweight (holding a smaller proportion than the benchmark) to Consumer Staples and an overweight (holding a larger proportion than the benchmark) to Information Technology contributing.

At the security level, an overweight in a Chinese Information Technology stock was the largest positive contributor during the year-to-date period, while an overweight in a different Chinese Information Technology stock was the largest detractor.

¹ Bloomberg/Man Group as at 30 June 2026.

² factors are outcomes provided by algorithmic models which undertake mass data analysis.

Market summary¹

The MSCI All Countries Asia ex Japan stock market index ended the first half of 2026 up 25.98% in USD. Despite sharp bouts of volatility – the result of geopolitical tensions in the Middle East, subsequent energy shock, and investor concerns over the sustainability of the AI-capital expenditure ('capex') boom – the region ended the first half among the top performing equity markets. Countries in the region navigated the impact of rising oil prices and supply shortages well following the conflict in the Middle East, relying on strategic reserves, increasing production of alternative energy sources, and actions to limit demand. This range of responses from policymakers largely helped insulate consumers from most of the price rises, and China seemingly became one of the biggest beneficiaries as the global need for energy security drove demand for renewables, an area where they maintain global leadership. South Korea was once again the top performing market, as the ongoing shortage in advanced memory chips used in AI applications sent the share prices of chipmakers SK Hynix and Samsung Electronics to record highs, with both companies' market capitalisation exceeding \$1 trillion over the period. Taiwan's markets also had a strong run, driven higher by TSMC and gains within the broader AI supply chain. In contrast, Indonesia was the region's worst performing market, as a combination of a weak currency, policy uncertainty, foreign selling, and lingering MSCI credit rating reclassification risk weighed on sentiment. China's market also underperformed, with strength in high-tech names and resilient exports (particularly green-tech exports post the energy shock), failing to offset weakness in internet and consumer discretionary names which were negatively impacted by AI disruption risks and uneven consumption data, respectively.

Performance review

The Fund returned 25.98% net of fees² in USD in the first half, underperforming MSCI AC Asia ex Japan ('the Benchmark') by 0.22%³. After a difficult first quarter which saw the evolution of AI trigger significant volatility, with the cost of being wrong amplified by highly concentrated markets and wide dispersion⁴ in returns, the second quarter saw conditions improve with the beneficiaries of hyperscaler⁵ capex broadening away from memory chip names. Positive earnings revisions across non-technology manufacturers across the region also began to accelerate.

The main driver of outperformance has been stock selection in South Korea as the Fund's largest overweight (in both relative and absolute terms), SK Hynix, along with Samsung Electronics, benefitted from dramatic strength in the memory sector of computing as the demand/supply imbalance shows no signs of improvement through 2027. Positioning in China, particularly within the rapidly growing humanoids and industrial robot industry, also paid off second quarter. These gains were somewhat offset by stock selection in Taiwan.

The key individual contributors to performance over the review period were:

SK Hynix and Samsung Electronics – These two South Korean memory chipmakers (along with Micron Technology) continued to profit from the surging demand in memory on the DRAM⁶ side. The first half saw SK Hynix's share price rise dramatically, hitting US\$1 trillion market capitalisation amid tight supply of memory chips and reports that the chipmaker is receiving investment offers from tech firms to secure critical chip supply. Samsung Electronics also had a strong run, though a risk of labour disruption weighed on the stock in May.

Leader Harmonious Drive – The Chinese manufacturer of the end harmonic drives⁷ which are essential to humanoid robotics had a strong second quarter, benefitting from good sector momentum as the adoption and commercialisation of humanoids continues gathering pace. As a component manufacturer the company occupies a dominant position in a fast-evolving industry at its early stages.

The key individual detractors to performance were:

Alibaba and Tencent – These two internet stocks had a difficult first half, with share prices falling at the start of the year on reports that taxes could be raised on internet companies should the high-tech enterprise tax rate fail to be renewed at the end of 2026 and again on concerns over AI's impact on gaming. Tencent was also weighed down by concerns about its AI strategy and its impact on margins. Alibaba had a difficult month in June, weighed down by multiple factors including reports of more regulation for internet companies from China's Administration for Market Regulation, potential for increased competition in public cloud as a result of the government's plan to build data centres across the country, and accusations from Anthropic that it "illicitly" accessed its models.

Bank Mandiri – Despite delivering solid Q1 results, the stock was weighed down by Indonesia's uncertain macroeconomic environment as the country's liquidity tightens and the currency and fiscal budgets remain challenged by market volatility and higher oil prices.

⁴ A measure of how widely individual returns vary from the average – wide dispersion means a bigger gap between the best- and worst-performing stocks.

⁵ A large cloud-computing company (such as Amazon, Microsoft or Google) that builds and operates data centres at very large scale.

⁶ Dynamic Random Access Memory, a common type of memory chip used in computers, smartphones and other electronic devices.

⁷ A precision gear mechanism used to control movement in robotic joints, valued for its accuracy and compact size.

Man Funds plc

Investment Managers' reports (continued)

Man Asia (ex Japan) Equity – Semi-Annual Report Commentary (continued)

Future outlook

Looking ahead, we are encouraged by the beneficiaries of hyperscaler capital expenditure broadening beyond memory names, and the acceleration in positive earnings revisions from non-technology manufacturers across the region. While the AI trade remains a key driver, we believe the region is also well positioned to capitalise on the other thematic opportunities that are currently playing out, including the growing need for energy security, the increased focus on defence, and industrialisation driven by the need for self-sufficiency amid geopolitical fragmentation. The region has navigated the energy shock of the Middle East conflict well with a variety of actions (reduction in imports by leveraging reserves and inventories, plus policy measures), but we expect progressing de-escalation and subsequent normalising of oil prices to support the markets (particularly in India and the Philippines). China's economic headwinds persist and will likely do so until meaningful policy measures are enacted to support consumption, but we remain encouraged by China's export strength and growing leadership in innovation.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Market Summary¹

The first quarter of 2026 began with a continuation of the late-2025 rally, as US Investment Grade (IG) spreads ² compressed to a three-decade low of 73bps intra-quarter and the main index tracking US High Yield (HY³) touched 264bps⁴. The constructive tone reversed sharply in February, triggered by two major shocks: a Supreme Court ruling striking down IEEPA⁵-based tariffs (prompting the US Administration to impose a 10% universal tariff under Section 122), and US-Israeli military strikes on Iran on February 28th, which sent the Brent crude oil price surging from as the Strait of Hormuz faced disruption. Spreads widened significantly into quarter-end US IG closing at 90bps, US HY at 328bps, Global IG at 92bps, and Global HY at 343bps, while the S&P 500 – the index tracking the top US equities – returned -4.33%. The US Federal Reserve (Fed) held interest rates at 3.50%–3.75%, the European Central Bank held at 2.00%, and the Bank of England held at 3.75% with a hawkish⁶ shift. Rates markets (covering debt instruments tied to interest rates and the future cost of money) also saw significant volatility, with longer-dated yields moving higher on inflation expectations in March tied to the oil shock. US agency mortgage-backed securities (MBS) was the sole positive-returning fixed income segment for the quarter at +0.58%, benefiting from spread stability and favourable prepayment dynamics.

The second quarter of 2026 saw a sharp recovery after credit spreads peaked in early April. A Pakistan-brokered ceasefire in the Iran conflict on April 8th, followed by a June 17th US-Iran memorandum of understanding lifting the naval blockade, drove Brent crude oil prices lower. Credit (bond) markets fully retraced Q1's losses and then some. US HY closed at 275bps, US IG at 76bps, Global HY at 283bps, and Global IG at 77bps. The S&P 500 index surged +15.20%, its strongest quarter since 2020, fuelled by Artificial Intelligence ('AI') capital expenditure re-acceleration. Inflation remained the dominant macro theme, with headline US Consumer Price Index hitting +4.2% YoY in May. Central banks turned broadly hawkish, the European Central Bank (ECB) raised the European headline interest rate to 2.25%, the Bank of Japan hiked to 1.00%, and the US Federal Reserve's Summary of Economic Projections June release shifted to imply a rate increase. Emerging markets hard-currency debt led fixed income returns at +3.98%, while duration⁷-sensitive segments lagged.

Performance review

For the six-month period ending June 30, 2026, Man Systematic US High Yield (the "Fund") returned 2.94% net of fees, outperforming its benchmark, the ICE BofA US High Yield Index⁸, which returned 1.89%⁹.

Model Performance

The model the fund is run to uses quantitative analysis to produce factor outcomes (pillars) provided by algorithmic analysis of mass data. Overall model performance for the six-month period was positive in two of the five model pillars. Quality produced the most positive returns, followed by Value. The Factor Selection pillar was flat over the period while the Momentum and Informed Investor pillars were out of favour.

Contribution Breakdown

Looking at the return contributions by sector and rating helps to identify the main thematic drivers of positive and negative performance. In terms of sectors, Media and Telecommunications were the most additive, driven by positive security selection effect. On the other hand, Capital Goods and Services detracted during the period, with selection struggling in both sectors. With respect to bond credit ratings, contributions were broadly positive across the aggregated investments in each of the BB, CCC & Below, and single-B ratings categories, with strength in selection offsetting muted-to-negative allocation effects. ¹⁰The return from the fund's BBB rated securities was flat for the period.

¹ Bloomberg as at 30 June 2026.

² A credit spread is the additional yield investors require for holding a corporate bond rather than a government bond of comparable maturity, such as a US Treasury. A wider spread indicates greater perceived credit risk.

³ The High Yield market covers bonds rated below BBB- by credit ratings agencies, reflecting their relatively higher risk of default compared with Investment Grade (IG).

⁴ 1 basis point (1bps) = 0.01%

⁵ The International Emergency Economic Powers Act (IEEPA), the US statute under which the tariffs in question had originally been imposed.

⁶ Favours higher interest rates / tighter monetary policy.

⁷ Bond price-sensitivity-to-rates.

⁸ Performance data is shown net of fees with income reinvested, as at 30 June 2026, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated for Man Systematic US High Yield I USD share class. Other share classes may charge higher fees. ICE BofA US High Yield Index is an official benchmark for the fund. Please consult the Fund's offering documents/ Key information Document ('KID') for more information.

⁹ Bloomberg as at 30 June 2026.

¹⁰ 'Selection' is the effect of which individual bonds the Fund chooses to hold within a given sector or ratings category. 'Allocation' is the effect of holding more or less in that sector or ratings category than the benchmark index. A positive selection effect means the bonds chosen outperformed their peers; a positive allocation effect means the sectors or ratings favoured outperformed the wider market.

Future Outlook

We expect ongoing geopolitical dynamics to continue to shape the market environment and factor landscape. Our attention centers on potential threats that could disrupt financial markets. The question of an AI bubble will undoubtedly persist as a key concern for investors. As we do not invest based on top-down views and instead focus on company-specific, bottom-up security selection, we strive to remain agnostic to the overall market environment by focusing on continuous research into new, diversifying signals and risk management techniques. Our goal, as always, is to build balanced, well-diversified portfolios that can navigate market inflections and volatility. With this in mind, we will not rest on our laurels but instead remain focused on improving our process to best manage the risks, known and unknown, that lie ahead.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Market Review¹

Q1 2026 was dominated by geopolitical conflicts and noise around Artificial Intelligence (AI). January 3rd saw the United States launch a military strike in Venezuela and capture the incumbent president Nicolas Maduro. Markets were generally muted in response, however the reaction to President Trump's reiteration of his desire to acquire Greenland the following week was anything but. The S&P 500 index measuring the largest US stocks recorded its worst day in three months, falling 2.1% in a single day as the US administration threatened 10% tariffs on February 1st on eight European nations who opposed the attempt to acquire the island. Markets subsequently rebounded immediately as Trump rowed back on tariff threats upon agreeing a deal on Greenland.

Q2 2026 began on a positive note as a US-Iran ceasefire sparked a broad risk-on rally², with the S&P 500 posting its best month since 2020. Momentum continued into May, though markets faced headwinds from rising yields — US 10-year treasuries hit 4.7% — and UK political uncertainty, as pressure on PM Starmer intensified. By June, Starmer had resigned, with Andy Burnham emerging as successor; markets took the transition in stride, though UK 30-year gilt yields³ briefly touched their highest levels since 1998 at 4.86%, reflecting concerns over Burnham's anticipated leftward tilt and the UK's already-stretched fiscal position.

A US-Iran deal in June offered some geopolitical relief, though the agreement proved fragile — strikes were exchanged just before quarter end, keeping risk sentiment cautious. On monetary policy, central banks diverged sharply: the European Central Bank and Bank of Japan both hiked interest rates by 25bps⁴ as Middle Eastern inflationary pressures broadened across global energy and commodity markets, while the US Federal Reserve and Bank of England opted to hold. New US Federal Reserve Chair Kevin Warsh struck a hawkish tone⁵ at his inaugural meeting, and markets remain priced for at least one US interest-rate further hike before year-end.

Performance review

During the period 1 January 2026 to 30 June 2026, Man Global Investment Grade Opportunities generated a total return of 2.77%⁶, outperforming the benchmark by 1.38%⁷ over the period.

Man China Equity – Semi-Annual Report Commentary

Market summary¹

The MSCI China 10/40 (USD) index measuring the performance of Chinese stocks broadly ended the first half of 2026 down 12.59%. The markets underperformed over the quarter on fears of artificial intelligence (AI) disruption risk, though China's markets proved more resilient than others during the market turmoil in March, with losses in AI and internet names offset by strength in renewables, coal and power equipment. This underperformance continued into the second quarter as strength in high-tech names and resilient exports (particularly green-tech exports post energy shock) failed to offset weakness in internet and consumer discretionary names which were negatively impacted by AI disruption risks and uneven consumption data, respectively.

Following China's Fourth Plenum in October, held once every five years to agree the next strategic plan, we saw clear signs that boosting domestic demand and enhancing people's well-being was high on the government agenda. This consumption led, reflation theme², however, did not play out as we expected, and the Two Sessions (China's annual parliamentary meetings) in March offered little detail around a meaningful consumer-focused stimulus plan. China's housing market continued to show some signs of stabilisation with an uptick in secondary home sales, but the sector largely remained under pressure over the period. Meaningful policy support to address consumption growth was not forthcoming.

Performance review

Man China Equity declined 6.67%³ net of fees during the period, outperforming the reference benchmark by 5.92%⁴. Stock selection in industrial names drove outperformance year to date, though this was offset by underweight (holding a smaller proportion than the benchmark) to information technology names.

The key contributors to relative performance at a stock-level were:

- **Leader Harmonious**
- **Weichai Power**
- **China Merchant Securities**

The key detractors to relative performance at a stock-level were:

- **Hangzhou Tigermed**
- **MMG**
- **Cambricon Technology**

Future outlook

China's economic headwinds persist and will likely do so until meaningful policy measures are enacted to support consumption, but we remain encouraged by China's export strength and growing leadership in innovation. Stock-specific risk⁵ exposure stands at 85%.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Investment Managers' reports (continued)

Man Asia Credit Opportunities – Semi-Annual Report Commentary

Market Summary¹

Global fixed income markets experienced exceptional volatility during the period, shaped by an escalating geopolitical conflict in the Middle East and its ripple effects across energy, inflation, and monetary policy. Despite this backdrop, Asian credit markets proved resilient, with the J.P. Morgan Asia Credit Index (JACI), which tracks US dollar-denominated bonds issued by Asian companies, delivering positive returns over the half year as a whole. The J.P. Morgan Asia Credit Index (JACI) posted a gain of 1.2%, with its investment grade (IG) and high-yield (HY) components returning 0.83% and 4.01%, respectively. HY outperformed IG driven by HY sovereign recovery stories (Sri Lanka, Pakistan) and a rebound in distressed China and Hong Kong real estate. HY metals and mining also did well but concentrated in a single issuer that tendered its bonds following a multi-notch rating upgrade².

New bond issuance was subdued throughout much of the period as issuers held back during the conflict, keeping net supply negative year-to-date (YTD) — a technically supportive dynamic for Asian credit. Issuance began recovering following the June Hormuz Strait peace agreement. Default rates ended the half at historic lows, and the credit ratings trajectory was positive, with upgrades significantly outpacing downgrades across the Asian credit universe.

Performance Review

The Fund delivered a positive net return over the period, navigating a sharp monthly drawdown in March, followed by a strong recovery. January was the standout month, with the Fund meaningfully outperforming the benchmark, driven by an overweight (holding a larger proportion than the benchmark) to Hong Kong investment grade property names, contributions from subordinated financials³ and high yield positions in Japan and China. February saw modest underperformance as falling US Treasury yields rewarded longer-duration⁴ sovereign bonds. March was the most difficult month, with underperformance driven by two idiosyncratic high yield positions marked down beyond what fundamentals warranted, partially mitigated by the underweight (holding a smaller proportion than the benchmark) to long-duration Indonesian and Philippine government bonds.

April delivered the strongest relative outperformance as risk premiums⁵ compressed. Pakistani and Sri Lankan sovereign bonds, subordinated financials, and overweight to India, Hong Kong, Japan, and metals and mining all contributed strongly, and the March detractors recovered materially. May brought further outperformance through high yield security selection, with a Japanese technology company achieving rising star⁶ status and an Indian holding upgraded from single-B to double-B⁷. June saw modest underperformance as the slight underweight in Sri Lanka versus the benchmark — which performed strongly as oil prices fell — detracted, alongside weakness in two Chinese corporate positions.

The Fund delivered a positive net return of 1.67%⁸ over the period and ahead of the 1.2%⁹ return of the benchmark.

The outperformance was due to the overweight positioning in HY corporates, the underweight in IG sovereigns, the overweight non-benchmark Japan and Australia, and a shorter duration profile of the Fund. Over the period IG corporates outperformed IG sovereigns. Security selection also added, with the overweight metals and mining names, rising star in Japan and other HY issuers tendering their bonds.

Key individual contributors to returns over the period included:

- High yield sovereigns (Pakistan)
- Subordinated financials (mainly insurance)
- Indian and Japan high yield corporates
- Metals and mining overweight
- Underweight to weaker investment grade sovereigns (Indonesia and Philippines)

Key individual detractors from returns included:

- China High Yield
- Underweight China financials
- Underweight Malaysia and Korea IG corporates
- small underweight Sri Lanka (which rallied strongly in June)

¹ Bloomberg as at 30 June 2026

² A tender offer is when a bond issuer offers to buy back its own bonds from investors before maturity, often at a premium, typically to reduce debt or take advantage of an improved credit profile.

³ Subordinated financial bonds rank below a bank or insurer's senior debt for repayment if the issuer runs into difficulty, and typically pay a higher yield to compensate for this added risk.

⁴ Duration measures how sensitive a bond's price is to changes in interest rates — longer-duration bonds tend to move more in price when rates change.

⁵ Risk premiums refers to the extra interest rates investors demand to hold riskier bonds compared to safer securities such as developed market government bonds.

⁶ A "rising star" is a bond issuer whose credit rating is upgraded from high yield to investment grade.

⁷ Credit rating agencies grade issuers using letters such as BB ("double-B") and B ("single-B"); a higher letter grade indicates lower default risk.

⁸ Performance data is shown net of fees with income reinvested, as at 30 June 2026, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated of (up to) 0.60% management fees for Man Asia Credit Opportunities I USD share class. Other share classes may charge higher fees. The J.P. Morgan Asia Credit Composite Total Return Index (USD) is an official benchmark for the Fund. Please consult the Fund's offering documents, Key Investor Information Document ('KIID') or Key Information Document ('KID') for more information.

⁹ Bloomberg as at 30 June 2026

Man Funds plc

Investment Managers' reports (continued)

Man Asia Credit Opportunities – Semi-Annual Report Commentary (continued)

Future Outlook

Looking forward, Asian credit markets enter the second half of 2026 on a constructive footing, supported by sound fundamentals, favourable technical conditions (still low new supply), and an attractive income backdrop. Risk premiums on the JACI are expected to remain broadly stable, ending the year modestly tighter, with returns driven primarily by carry — the income generated by holding bonds — rather than by further significant spread compression.

Credit fundamentals are in good shape. The ratio of rating upgrades to downgrades has reached a multi-year high, net leverage⁸ among investment grade issuers remains low and stable, and the 2026 default rate is forecast at approximately 1.8% — the lowest since before the pandemic — with zero fallen angels⁹ recorded year-to-date. YTD there was only 1 default in the USD Asia HY universe, the lowest compared with US HY and European HY universe. The Asia high yield universe, in particular, benefits from a cleaner composition following the significant exit of Chinese distressed real estate issuers from the index.

The Fund maintains a higher exposure to shorter-dated high yield bonds relative to the benchmark, where we see solid underlying fundamentals and limited sensitivity to interest rate moves. For interest rate management, we continue to focus on medium-term bonds where additional yield is sufficient to balance the rate risk, and we remain underweight very long-dated bonds, as we believe US government financing requirements will keep long-term yields elevated. The key risks we are monitoring include any re-escalation of Middle East tensions, a faster-than-expected rise in US Treasury yields under the new Federal Reserve Chair, and political developments in Indonesia — where a potential reclassification by MSCI¹⁰ from emerging to frontier market status in November 2026 could affect investor flows.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

⁷ Credit spreads are the additional yield investors demand for holding a corporate bond over a comparable government bond, reflecting the perceived risk of default.

⁸ 'Frothy' valuations describe asset prices that look expensive relative to underlying fundamentals, increasing the risk of a market correction.

Market Summary¹

The first half of 2026 was defined by the US-Iran conflict, which erupted in late February and dominated global markets through to its seeming resolution in mid-June. The closure of the Strait of Hormuz — through which approximately 20% of global oil supply passes — triggered a severe energy shock, with the price of Brent crude surging over 60% in March before ending Q2 down 38.4% following the peace agreement.

As the blockade persisted into March, stagflation fears became the consensus narrative. The US 10-year Treasury yield rose 38 basis points² reflecting growing risk concerns and market expectations swung dramatically — from anticipated interest rate cuts to pricing in multiple hikes across the UK, US, and Eurozone. UK 30-year gilt yields³ reached their highest levels since 1998. The dollar strengthened, with the DXY⁴ up 2.4% in March, while gold and equities broadly sold off.

April brought the first signs of de-escalation when President Trump announced a two-week pause in military activity. Though Islamabad talks proved inconclusive, markets rebounded sharply — the US S&P 500 index measuring the largest US stocks gained 10.5% and the Philadelphia Semiconductor Index⁵ surged 38.4%. All four major central banks held rates steady, with the European Central Bank (ECB) surprising markets with a less hawkish tone than expected.

June brought resolution. The peace deal was announced on 14 June and the MOU⁶ signed on 17 June, with the Brent crude oil price falling 27% on the month. Despite the geopolitical de-escalation, central banks turned more hawkish: the ECB raised rates 25 basis points⁷ to 2.25% — its first hike since 2023 — and the Bank of Japan (BOJ) raised rates to 1.0%. The US Federal Reserve held rates at 3.50–3.75% under new Chair Kevin Warsh but struck a hawkish⁸ tone, with markets pricing a hike by October. The S&P 500 delivered its best quarter since Q2 2020 (+15.2% for Q2), while PM Starmer's resignation briefly unsettled UK gilts before a swift recovery as Andy Burnham's Labour leadership became uncontested.

Performance Review

Against this backdrop, the Fund returned 1.83%⁹ for the period, underperforming the benchmark, which returned 2.09%¹⁰.

The half-year performance was shaped by three distinct phases: the beginning of the year started with a risk rally¹¹ driven by strong economic data, the sell-off in March driven by the onset of the Iran conflict and finally, a recovery over the last three months as the conflict de-escalated. In March, the closure of the Strait of Hormuz and a broad de-risking led to credit spread¹² decompression. The Fund underperformed its benchmark given its lower rated BBB profile relative to higher rated, longer duration¹³ benchmark. As the crisis continued, stagflation fears drove returns and long duration was out of favour. But as April's sharp rebound occurred, the Fund's structural overweight¹⁴ in the belly of the curve¹⁵, preference for higher-carry¹⁶ shorter-duration exposures, and overweight in defensive European utility names all contributed positively to relative performance.

The key contributors to returns included:

- Integrated Utilities which recovered sharply from March lows and were the strongest sector in Q2
- Currency and duration management: shorter duration than the benchmark, overweight the belly versus the longer-dated bonds, Sterling overweight concentrated in the shorter dated bonds which provided higher carry while avoiding much of the volatility
- Defensive European credit which was the primary beneficiary of the Hormuz normalisation and interest rate recovery
- Selected high yield bond positions in non-cyclical sectors which remained well-supported throughout the period

The key detractors from returns included:

- BBB credit¹⁷ spread widening in March driven by indiscriminate risk-off¹⁸ at the onset of the conflict
- Financials which underperformed in the early stages of the risk-off move

¹ Bloomberg as at 30 June 2026

² A unit used to describe changes in interest rates or bond yields. One basis point equals 0.01 percentage points.

³ The returns available on UK government bonds.

⁴ The US Dollar Index, which measures the value of the US dollar against a group of major currencies.

⁵ An index tracking major companies involved in the design, manufacture and sale of semiconductors.

⁶ Memorandum of Understanding, a formal statement setting out an agreement or shared intentions between parties.

⁷ A basis point is 1/100 of a percent.

⁸ Hawkish refers to favouring higher interest rates / tighter monetary policy (to control inflation).

⁹ Performance data is shown net of fees with income reinvested, as at 30 June 2025, and does not take into account sales and redemption charges where such costs are applicable. Investment Managers' reports (continued)

Man Global Climate Transition Impact Bond – Semi-Annual Report Commentary (continued)

Future Outlook

The Fund employs integrated assessment models focusing on climate change to aid capital allocation. This framework is complemented by fundamental credit and fixed-income analysis, guiding our investment decisions.

As of the end of June 2026, the Fund's allocation was approximately:

- 51% to Low Carbon Energy
- 32% to Electrification
- 6% to Industrial
- 5% to Transportation
- 1% to Agriculture and Land Use

Looking ahead to the second half of 2026, the investment environment has changed significantly compared with a year ago. Interest rates had previously been expected to fall, but several central banks are now raising rates, or may do so, to help control inflation. Although the Iran conflict has reduced, it may take time for oil supplies, international relations and expectations for future inflation to return to more normal levels.

We remain confident in several areas. European corporate bonds should benefit from a reopening of the Strait of Hormuz and the reduction in geopolitical tensions. Concerns about energy security have also increased political support for renewable energy and electricity networks. This should provide long-term support for many of the sectors in which the Fund invests.

The financial position of companies also remains generally supportive. Corporate earnings have continued to exceed expectations, while the proportion of companies failing to repay their debts remains historically low. Companies have issued fewer new bonds than governments, except for significant issuance by some very large technology companies. In addition, more investment-grade companies have received improvements to their credit ratings than reductions.

Together with the relatively attractive income still available from bonds following the market recovery in the second quarter, these factors support our positive outlook for higher-quality corporate bonds.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man Emerging Markets Corporate Credit Opportunities – Semi-Annual Report Commentary

Market summary¹

2026 opened on a constructive note for Emerging Markets (EM) credit, continuing the positive momentum from 2025. EM corporate fundamentals² remained sound, with net leverage flat year-on-year and rating actions net positive for the second consecutive year. The JPM CEMBI Broad Diversified Index³ delivered positive returns through the first two months as softer US economic data appeared to pave the way for earlier Federal Reserve rate cuts, with the 10-year Treasury yield dropping to 3.97% by end-February. EM fund inflows remained robust, with \$6.1 billion in net inflows in January alone.

However, the outbreak of the US-Israeli war against Iran on 28 February fundamentally altered the market backdrop. The closure of the Strait of Hormuz on 4 March triggered the most significant oil supply disruption in the history of the global oil market, with Brent crude surging from around \$72 to nearly \$120 per barrel at its peak — a 51% gain in March alone. Q2 was characterised by ongoing tensions in the Middle East as the unresolved conflict continued to have an impact on energy prices. The diversified regional composition of the EM corporate bond universe provided some resilience, with Latin America benefiting from lower direct exposure to the geopolitical risk.

Performance Review

Against this backdrop, Man Emerging Markets Corporate Credit Opportunities was up 3.23%⁴, outperforming its benchmark which returned 4.25%⁵.

Man Global Resources Equity – Semi-Annual Report Commentary

Market Summary¹

The S&P Global Natural Resources Index rose 9.39% in what was a volatile year for the markets characterized by heightened geopolitical risk, growing fears of inflation, and a higher interest rate environment.

Oil and oil equities had a strong start to the year amid escalating geopolitical tension including the US intervention in Venezuela and again following the outbreak of hostilities in the Middle East in March. After reaching a peak by the end of March, oil and oil equities quickly reversed, giving up earlier gains, on truce headlines. The situation in the Middle East continues to oscillate between truce and escalation with little clarity and stability being offered to investors. While the initial truce sparked some tanker movements, the activity has quickly subsided in July. Details remain sparse and direction may accelerate in either direction.

Natural gas and related equities were mixed over the period. US natural gas saw an initial spike from Iran and prices quickly moderated, while international markets remain very elevated as Qatar infrastructure damages have limited exports.

Copper prices were also mixed over the period, initially rallying amid a tighter supply backdrop and increased investor attention, before declining in March on a combination of factors including risk-off on pro-growth sectors due to Iran, potential for higher energy prices to drive inflation and recession and softer near-term physical markets. Copper prices recovered from this weakness as investors started pricing in a resolution in the Middle East conflict. Aluminum prices, however, underperformed on Iran truce.

Gold/silver and related equities surprised investors by selling off at the start of the Iran War. The weakness was due to a stronger dollar, positioning unwinds and selling pressure from central banks. This weakness continued into the second quarter on rate hike fears and ongoing dollar strength. We saw meaningful central bank purchases despite the reduction in ETF² demand.

Renewable names were volatile for the period, performing strongly as investors started to realize that the sector is a structural winner from the Middle East volatility and as the call on incremental power supply dramatically increases from the artificial intelligence (AI) revolution, before being caught up in the momentum factor volatility in June.

Performance Review

In the first half of 2026, the Fund gained 11.66% net of fees³. The Fund's drivers of the outperformance were primarily renewables positions.

At the stock level, the top contributors were Bloom Energy⁴, ArcelorMittal, and Darling Ingredients. Bloom Energy had a strong quarter, benefitting from positive business momentum in their behind-the-meter⁵ fuel cell offering, continued commercial contract wins and an expanding end market. ArcelorMittal benefitted from the rise in steel prices over the second quarter. Darling Ingredients, along with Neste OYJ, had a strong run as part of the renewable biodiesel supply chain which tightened from shortages in the gasoline and diesel markets amid the conflict in the Middle East.

Detractors over this period included Equinox Gold, Builders Firstsource, and Kinross Gold Corporation. Both Equinox Gold and Kinross Gold Corporation were negatively impacted by declining gold prices on rate hike fears and dollar strength over the period. Builders Firstsource underperformed as US home building trends remain subdued.

Positioning & Outlook

We believe that the volatility generated by the current geopolitical whipsaw, rates fear and AI momentum unwind will ultimately prove to be an attractive opportunity as the fundamentals of the natural resources sector remain attractive and intact.

The situation in the Middle East has de-escalated with a 60-day pause and negotiation period. While details are sparse and a re-escalation is a definite possibility at time of writing, this is a clear step-up from the worst-case scenarios. Tanker flows have picked up but remain far from normalized levels. The moratorium period will bring forth some trapped tanker cargoes, but a full normalization of the energy supply chain will take a more prolonged pace. Oil prices will remain volatile with many near-term upside risks not baked into positioning or price. However, investors should keep in mind that oil markets were meaningfully oversupplied before Iran and unless there is clear re-escalation, the longer-term path for oil is likely lower given the structural loss in market share. We remain uninvested in traditional fossil fuel producers.

Natural gas remains an energy market we are closely monitoring. Oil prices have nearly returned to pre-Iran levels yet global natural gas prices are still meaningfully above pre-Iran levels. Infrastructure damage has limited some Middle Eastern exports, but US LNG⁶ exports have remained very strong. However, we note that US infrastructure does not have much slack and cannot be relied on solely to balance global winter demand. If weather turns colder than normal for the winter, there is a risk of further price appreciation in global gas prices. Potential offsets will be the strong deployment of renewables globally that will help to defray physical power shortages as well as warmer-than-average winters from El Niño⁷.

¹ Bloomberg as at 30 June 2026

² An exchange-traded fund (ETF) is a basket of securities, such as stocks or bonds, that trades on an exchange like a single stock and typically tracks an index or asset class.

³ Performance data is shown net of fees with income reinvested for the I USD share class with a 0.75% management fee. It does not take into account sales and redemption charges where such costs are applicable. Other share classes may charge higher fees. Launch date: 14 April 2025.

⁴ The organisations and/or financial instruments mentioned are for reference purposes only. The content of this material should not be construed as a recommendation for their purchase or sale. The Fund is actively managed and will use the S&P Global Natural Resources Index (the "Benchmark") for performance comparison purposes. The Fund's investment policy is not constrained by the Benchmark.

⁵ 'Behind-the-meter' refers to power generation or storage equipment installed on a customer's own site, providing electricity directly rather than via the public grid.

⁶ LNG (liquefied natural gas) is natural gas that has been cooled to a liquid form so it can be transported by ship rather than by pipeline.

⁷ El Niño is a recurring climate pattern involving the warming of sea surface temperatures in the Pacific Ocean, which can disrupt weather patterns and agricultural output worldwide.

Positioning & Outlook (continued)

One area we are closely monitoring is the emergence of a strong El Niño weather pattern. While it is easy to blame El Niño for the European heat wave, the nuances of weather changes vary from region to region and have different impacts on various natural resource sectors. One of the most impacted areas will be global agriculture and its potential corresponding inflationary pressures on food prices and availability. At the current stage, we are observing manageable impacts on global food supply chains but this is an area we are carefully watching in the current and following growing season.

We continue to hold and build on our copper exposures as global manufacturing signals continue to recover and longer-term structural drivers like electrification and AI will generate sustained demand. We are also maintaining our positive view on aluminum as the near-to-mid-term can still see global power tightness and aluminum supply will still take time to ramp back into the market even with an opening of the Strait of Hormuz. Our views on other industrial materials remain unchanged; we remain bullish on industrial metals as the manufacturing cycle has shown green shoots in stabilization and a gradual resumption to growth. We are overweight the steel complex, particularly the US sector as deglobalization demand and trade restrictions will create an attractive environment for domestic producers. We have select exposure in the portfolio and remain positive on critical minerals such as tungsten, rare-earth and other critical materials.

We believe the case for gold remains strong for the long term and \$4000/oz remains an important investor psychological level, but prices are likely to remain relatively range-bound until more clarity is seen with the new Fed Chairman and rates policy going forward.

In the long run, we continue to strongly believe that the structural winner from the Middle East volatility is renewable energy as energy security comes more and more into focus. Global energy policy will continue to shift toward energy security as a top priority and we are already beginning to see increased renewable penetration driven by cost, efficiency and security. In addition to energy security, the call on incremental power supply is dramatically increasing from the AI revolution; we believe this demand pull will be seen in many subsectors like fuel cells and solar supply chain. We expect these trends to continue in the coming years and remain the most bullish on behind-the-meter solutions and battery storage.

We are incrementally more bullish on the agricultural and food sector as we increasingly see weather risk as being chronically under-priced in the sector. We are currently positioned in soybean crush¹ and soybean oil due to the government support for the US biofuel industry as well as higher demand due to disruptions in traditional fuel infrastructure.

We remain overweight in gold/silver, copper and aluminum, basic chemicals, agricultural processors, paper/packaging and renewables/power grid.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

¹ 'Soybean crush' refers to the process of processing raw soybeans into soybean meal and soybean oil, and to the related trading strategy of taking positions on the price difference (the 'crush spread') between the raw beans and their processed products.

Market summary¹

Global equities navigated a turbulent first half of 2026, shaped by two dominant and at times conflicting themes: Artificial Intelligence ('AI')-driven optimism and geopolitical risk. The first quarter was marked by meaningful volatility, with developed markets declining, the S&P 500 Index measuring the largest US stocks fell -4.33% and the MSCI World Index (which measures the performance of global equities as a whole) dropped -3.57%, as enthusiasm for mega-cap (the largest companies by market value) technology stocks gave way to concerns around AI's disruption to traditional software business models. European stock markets declined modestly during the first quarter of 2026, reversing course after several quarters of strength. A sharp late-quarter spike in oil prices, with Brent crude surging in March following the effective closure of the Strait of Hormuz, amplified risk-off sentiment (a general move away from riskier assets) and reignited inflation fears globally. Emerging markets ('EM') proved more resilient, with the MSCI Emerging Markets Index falling just -0.17%, though performance was uneven: Taiwan and Korea benefited early from AI and semiconductor tailwinds, while broader EM faced headwinds from Asia's outsized exposure to Middle East energy flows. The Q1 factor environment (factors are outcomes provided by algorithmic models which undertake mass data analysis) reflected this dynamic, with a textbook oil-shock rotation that led investors to sell shares that tend to move more sharply than the wider market, along with those that had recently been rising, and to buy cheaper shares and those paying higher dividends, though the overall factor backdrop remained broadly constructive.

Q2 saw a dramatic reversal of Q1's conflict-driven selloff, with global equities staging one of their strongest multi-month rallies in recent years as Middle East tensions eased and markets rotated decisively back into AI and technology stocks. The MSCI World Index advanced +13.8% for the quarter, although returns were front-loaded before momentum faded into June. During the second quarter the S&P 500 Index gained 15.2%, the MSCI Europe Index returned 11.8% in euro terms, and the MSCI Emerging Markets Index surged over 24%, powered by Taiwanese and Korean semiconductor names. Oil prices fell sharply in May as Iran tensions eased, alleviating inflationary pressure, though June brought a modest pause amid fresh Middle East flare-ups and growing scepticism over AI capital expenditure returns. Factor leadership shifted emphatically pro-risk (favouring higher-risk assets), with beta (the overall movement of the market), size, growth and momentum all strongly positive, in sharp contrast to Q1's defensive rotation.

Performance review

Against this backdrop, Man Systematic Global Core Equities (the "Fund") had a positive return over the period².

Man Numeric, the fund manager of the Fund, seeks to add value through a fundamentally driven, quantitative, bottom-up stock selection process. Stocks are selected based on the output of our quantitative investment models. The overall model performance was positive during the period. Within the overall model, the Momentum Innovation, Factor Selection, Momentum Academic+, and Informed Investor models performed positively during the period. The Value Innovation, Quality, and Value Academic+ models performed negatively during the period. From a regional perspective, the Japan, US, Europe, and UK models performed positively during the period. The Asia ex-Japan model performed negatively during the period.

From a sector perspective, stock selection was positive during the period, with holdings in the Industrials and Financials sectors contributing. Sector allocation was flat for the period, with an underweight (holding less of a stock or sector than the benchmark does) to Communication Services contributing and an underweight to Energy detracting.

Stock selection was positive from a country perspective, with holdings in Switzerland and France contributing. Country allocation was positive for the period, with an overweight to the Netherlands contributing.

At the security level, an overweight in an American Information Technology stock was the largest positive contributor during the period, while an overweight in an American Information Technology stock was the largest detractor.

Man Systematic Global Core Equities – Semi-Annual Report Commentary (continued)

Future outlook

We anticipate ongoing geopolitical dynamics to continue to shape the market environment and factor landscape. Our attention centers on potential threats that could disrupt equity markets. The question of an AI bubble will undoubtedly persist as a key concern for investors. As we do not invest based on top-down views and instead focus on company-specific, bottom-up stock selection, we strive to remain agnostic to the overall market environment by focusing on continuous research into new, diversifying signals and risk management techniques. Our goal, as always, is to build balanced, well-diversified portfolios that can navigate market inflections and volatility. With this in mind, we will not rest on our laurels but instead remain focused on improving our process to best manage the risks, known and unknown, that lie ahead.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. Investment Managers' reports (continued)

Man Global Credit Value – Semi-Annual Report Commentary

Market Summary

Q1 2026 was dominated by geopolitical conflicts and noise around Artificial Intelligence (AI). January 3rd saw the United States launch a military strike in Venezuela and capture the incumbent president Nicolas Maduro. Markets were generally muted in response, however the reaction to President Trump's reiteration of his desire to acquire Greenland the following week was anything but. The S&P 500 index measuring the largest US stocks recorded its worst day in three months, falling 2.1% in a single day as the US administration threatened 10% tariffs on February 1st on eight European nations who opposed the attempt to acquire the island. Markets subsequently rebounded immediately as Trump rowed back on tariff threats upon agreeing a deal on Greenland.

Q2 2026 began on a positive note as a US-Iran ceasefire sparked a broad risk-on rally¹, with the S&P 500 posting its best month since 2020. Momentum continued into May, though markets faced headwinds from rising yields — US 10-year treasuries hit 4.7% — and UK political uncertainty, as pressure on PM Starmer intensified. By June, Starmer had resigned, with Andy Burnham emerging as successor; markets took the transition in stride, though UK 30-year gilt yields² briefly touched their highest levels since 1998 at 4.86%, reflecting concerns over Burnham's anticipated leftward tilt and the UK's already-stretched fiscal position.

A US-Iran deal in June offered some geopolitical relief, though the agreement proved fragile — strikes were exchanged just before quarter end, keeping risk sentiment cautious. On monetary policy, central banks diverged sharply: the European Central Bank and Bank of Japan both hiked interest rates by 25bps³ as Middle Eastern inflationary pressures broadened across global energy and commodity markets, while the US Federal Reserve and Bank of England opted to hold. New US Federal Reserve Chair Kevin Warsh struck a hawkish tone⁴ at his inaugural meeting, and markets remain priced for at least one further US interest-rate hike before year-end.

Performance Review

The portfolio delivered positive⁵ total returns, in excess of the global high yield and investment grade indices.

Top three individual contributors and detractors

Man Global Credit Value – Semi-Annual Report Commentary (continued)

Future Outlook

Looking ahead, we anticipate that rates, rather than spreads¹, will be the dominant driver of credit market returns — a view underpinned by continued geopolitical uncertainty, sticky inflation in developed markets, and the prevailing hawkish tone among major Central Banks. Despite frothy valuations² at the index level, opportunities remain for bottom-up (evaluating each individual issuer rather than looking at movements in prices within a particular market or market segment) investment grade bond investors like ourselves.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. Investment Managers' reports (continued)

Man Systematic European Equity – Semi-Annual Report Commentary

Man Systematic European Equity launched on 15th of May 2026.

Market summary¹

Global equities navigated a turbulent first half of 2026, shaped by two dominant and at times conflicting themes: Artificial Intelligence ('AI')-driven optimism and geopolitical risk. The first quarter was marked by meaningful volatility, with developed markets declining, the S&P 500 Index measuring the largest US stocks fell -4.33% and the MSCI World Index (which measures the performance of global equities as a whole) dropped -3.57%, as enthusiasm for mega-cap technology stocks gave way to concerns around AI's disruption to traditional software business models. European stock markets declined modestly during the first quarter of 2026, with the MSCI Europe Index returning -0.94% in euro terms, reversing course after several quarters of strength. A sharp late-quarter spike in oil prices, with Brent surging in March following the effective closure of the Strait of Hormuz, amplified risk-off sentiment (a general move away from riskier assets) and reignited inflation fears globally. Emerging markets proved more resilient, with the MSCI Emerging Markets Index falling just -0.17%, though performance was uneven: Taiwan and Korea benefited early from AI and semiconductor tailwinds, while broader Emerging Markets (EM) faced headwinds from Asia's outsized exposure to Middle East energy flows. The Q1 factor² environment reflected this dynamic, with a textbook oil-shock rotation that led investors to sell shares that tend to move more sharply than the wider market, along with those that had recently been rising, and to buy cheaper shares and those paying higher dividends, though the overall factor backdrop remained broadly constructive.

The second quarter of 2026 saw a dramatic reversal of Q1's conflict-driven selloff, with global equities staging one of their strongest multi-month rallies in recent years as Middle East tensions eased and markets rotated decisively back into AI and technology stocks. The MSCI World Index advanced +13.8% for the quarter, although returns were front-loaded before momentum faded into June. During the second quarter the S&P 500 Index gained 15.2%, the MSCI Europe Index returned 11.8% in euro terms, and the MSCI Emerging Markets Index surged over 24%, powered by Taiwanese and Korean semiconductor names. Oil prices fell sharply in May as Iran tensions eased, alleviating inflationary pressure, though June brought a modest pause amid fresh Middle East flare-ups and growing skepticism over AI capital expenditure returns. Factor leadership shifted emphatically pro-risk (favouring higher-risk assets), with beta (the overall movement of the market), size, growth and momentum all strongly positive, in sharp contrast to Q1's defensive rotation.

Performance review

For the May 18, 2026 through June 30, 2026 period, the Man Systematic Europe Equity (the "Fund") performed positively and underperformed its benchmark, the MSCI Europe Index³. Due to regulation, which requires an extended period of time to pass to ensure figures provided are meaningful, we are unable to provide performance numbers for the fund until 12 full calendar months have passed since launch.

Model Performance

The Fund employs a model utilizing quantitative analysis. Overall combination model performance was positive for the period. The Momentum Academic+ model produced the most positive returns, followed by Informed Investor and Momentum Innovation. Quality and Value Innovation were flat over the period, while Value Academic+ and Factor Selection detracted.

Contribution Breakdown

From a sector perspective, stock selection was negative and sector allocation was flat over the period. Stock selection within the Consumer Discretionary and Utilities sectors detracted the most, while selection within the Financials and Consumer Staples sectors were additive. Within sector allocation, an overweight (higher exposure than the benchmark) to Communication Services detracted while an overweight to Information Technology contributed.

From a country perspective, stock selection was negative. Picks in Spain detracted while picks in the UK contributed. The Fund's country allocation was positive, with an overweight to the Netherlands contributing and an underweight to Spain detracting.

From an individual stock standpoint, the Fund's underweight holding in a German Information Technology firm and overweight holdings in a UK Industrials and a Dutch Information Technology firm were the three most significant positive contributors. The three stocks that detracted the most from performance were overweight holdings in a Swiss Information Technology firm, a Norwegian Information Technology firm and a Spanish Utilities firm.

¹ Bloomberg as at 30 June 2026.

² Factors are outcomes provided by algorithmic models which undertake mass data analysis.

³ Bloomberg as at 30 June 2026. The MSCI Europe Net Dividends Total Return index in EUR is an official benchmark for the fund. Please consult the Fund's offering documents, Key Investor Information Document ('KIID') and/or Key Information Document ('KID') for more information.

Future Outlook

We expect ongoing geopolitical dynamics to continue to shape the market environment and factor landscape. Our attention centers on potential threats that could disrupt equity markets. The question of an AI bubble will undoubtedly persist as a key concern for investors. As we do not invest based on top-down views and instead focus on company-specific, bottom-up stock selection, we strive to remain agnostic to the overall market environment by focusing on continuous research into new, diversifying signals and risk management techniques. Our goal, as always, is to build balanced, well-diversified portfolios that can navigate market inflections and volatility. With this in mind, we will not rest on our laurels but instead remain focused on improving our process to best manage the risks, known and unknown, that lie ahead.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Performance review

For the May 21, 2026 through June 30, 2026 period, the Man Funds plc - Man Systematic US Equity (the 'Fund') performed positively and outperformed its benchmark, the S&P 500 Index³. Due to regulation, which requires an extended period of time to pass to ensure figures provided are meaningful, we are unable to provide performance numbers for the fund until 12 full calendar months have passed since launch.

Model Performance

The Fund employs a model utilizing quantitative analysis. Overall combination model performance was positive for the period. The Value Academic+ model produced the most positive results, followed by Value Innovation, Factor Selection, Quality and Momentum Academic+. The Momentum Innovation model was flat for the period while the Informed Investor model was negative.

Contribution Breakdown

From a sector perspective, stock selection and sector allocation were positive over the period. Stock selection within the Industrials and Consumer Discretionary sectors contributed the most, while selection within the Materials and Consumer Staples sectors detracted. Within sector allocation, an underweight (lower exposure relative to the benchmark) to Communication Services contributed while no one sector significantly detracted.

From an individual stock standpoint, the Fund's overweight holdings in a US Information Technology firm and a US Communication Services firm as well as an underweight holding in a US Information Technology were the three most significant positive contributors. The three stocks that detracted the most from performance were two underweight holdings in US Information Technology firms and an overweight holding in a US Information Technology firm.

Future Outlook

We expect ongoing geopolitical dynamics to continue to shape the market environment and factor landscape. Our attention centers on potential threats that could disrupt equity markets. The question of an AI bubble will undoubtedly persist as a key concern for investors. As we do not invest based on top-down views and instead focus on company-specific, bottom-up stock selection, we strive to remain agnostic to the overall market environment by focusing on continuous research into new, diversifying signals and risk management techniques. Our goal, as always, is to build balanced, well-diversified portfolios that can navigate market inflections and volatility. With this in mind, we will not rest on our laurels but instead remain focused on improving our process to best manage the risks, known and unknown, that lie ahead.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. They are intended to provide a comparative indication of particular asset classes, investment sectors, or financial markets more widely ("market backdrop"). Indices definitions

CBOE Volatility Index (VIX Index)	Index measuring the market's expectation of future volatility. The VIX Index is based on options of the S&P 500® Index, considered the leading indicator of the broad U.S. stock market. The VIX Index is recognised as the world's premier gauge of U.S. equity market volatility. For more information go to http://www.cboe.com/vix
FTSE 100 Index	The FTSE 100 is a market-capitalisation weighted index of UK-listed blue chip companies. The index is part of the FTSE UK Index Series and is designed to measure the performance of the 100 largest companies traded on the London Stock Exchange that pass screening for size and liquidity. For more information go to https://www.ftserussell.com/index-series/index-spotlights/uk-equity-indices .
ICE BofA Index	The ICE BofA Index is a series of market-capitalisation weighted indices designed to measure the performance of various fixed-income markets. These indices are constructed by the Intercontinental Exchange (ICE) and Bank of America (BofA), spanning a wide range of bond types, including corporate, government, and municipal bonds. The indices are commonly used as benchmarks by investors and portfolio managers. For more information, go to https://www.theice.com/market-data/indices .
JP Morgan Emerging Market Bond Index Global (EMBI Global)	The J.P. Morgan Emerging Markets Bond Index Global ("EMBI Global") is a traditional, market capitalisation weighted index belonging to the JPMorgan Emerging Market Bond Index (EMBI), which are a set of three bond indices to track bonds in emerging markets operated by J P Morgan. The EMBI Global tracks total returns for traded external debt instruments in the emerging markets and is an expanded version of the JPMorgan EMBI+. As with the EMBI+, the EMBI Global includes U.S dollar-denominated Brady bonds, loans, and Eurobonds with an outstanding face value of at least \$500 million. It covers more of the eligible instruments than the EMBI+ by relaxing somewhat the strict EMBI+ limits on secondary market trading liquidity. Additionally, the EMBI Global defines emerging markets countries with a combination of World Bank-defined per capita income brackets and each country's debt-restructuring history. This criteria allows the EMBI global to include a number of higher-rated countries. For more information go to www.jpmorgan.com
JP Morgan Government Bond Index Emerging Market Global Diversified (EMBI Global Diversified)	The index is a comprehensive Emerging Markets debt benchmark that tracks local currency bonds issued by emerging market governments. EMBI Global Diversified is positioned as the investable benchmark that includes only those countries that are accessible by most of the international investor base. The diversification methodology limits the weights of the larger index countries by only including a specified portion of those countries' eligible current face amounts of debt outstanding, thus providing a more even distribution of weights across the countries in the index. The index belongs to the JPMorgan Emerging Market Bond Index (EMBI) family of indices for which returns and statistics are available from December 1993. For more information go to www.jpmorgan.com
MSCI All Country World Index (MSCI ACWI)	The MSCI ACWI Index, MSCI's flagship global equity index, is designed to represent performance of the full opportunity set of large- and mid-cap stocks across 23 developed and 27 emerging markets. As of November 2020, it covers more than 3,000 constituents across 11 sectors and approximately 85% of the free float-adjusted market capitalisation in each market. The index is built using MSCI's Global Investable Market Index (GIMI) methodology, which is designed to take into account variations reflecting conditions across regions, market cap. Sizes, sectors, style segments and combinations. For more information go to www.msci.com
MSCI Emerging Markets Index	The MSCI Emerging Markets Index captures large and mid cap representation across 24 Emerging Markets (EM) countries*. With 1,136 constituents, the index covers approximately 85% of the free float-adjusted market capitalisation in each country. For more information go to www.msci.com
MSCI Europe Index	The MSCI Europe Index captures large and mid cap representation across 15 Developed Markets (DM) countries in Europe*. With 442 constituents, the index covers approximately 85% of the free float-adjusted market capitalisation across the European Developed Markets equity universe. For more information go to www.msci.com
MSCI Europe ex UK Index	The MSCI Europe ex UK Index captures large and mid cap representation across 14 Developed Markets countries in Europe. With 345 constituents, the index covers approximately 85% of the free float-adjusted market capitalisation across European Developed Markets excluding the UK. For more information go to www.msci.com
MSCI World Index	The MSCI World Index captures large and mid cap representation across 23 Developed Markets (DM) countries*. With 1,634 constituents, the index covers approximately 85% of the free float-adjusted market capitalisation in each country. For more information go to www.msci.com
Russell/Nomura Large Cap value Index	The Russell/Nomura Large Cap Index contains the top 85% value stocks of the Russell/Nomura Total Market Index in terms of float-adjusted market cap
Russell/Nomura Total Market Index	The Russell /Nomura Total Market Index is a Japan Equity index consisting of the top 1,000 stocks by market cap excluding stable shareholdings covering the top 98% of all stocks listed on all Japan's stock exchanges in terms of float-adjusted market cap. For more information go to www.ftse.com
S&P 500	Index is a widely recognised gauge of the U.S. equities market. This index is an unmanaged capitalisation-weighted index consisting of 500 of the largest capitalisation U.S. common stocks. The returns of the S&P 500 include the reinvestment of dividends. For more information go to https://eu.spindices.com/
Tokyo Stock Price Index (TOPIX)	Capitalisation-weighted index of all companies listed on the First Section of the Tokyo Stock Exchange. This is a measure of the overall trend in the stock market, and is used as a benchmark for investment in Japan stocks. For more information go to https://www.jpx.co.jp/english/markets/indices/topix/

Man Funds plc

Investment Managers' reports (continued)

GLOSSARY

Active management	Active management is the use of a human element, such as a single manager, co-managers or a team of managers, to actively manage a fund's portfolio. Active managers rely on analytical research, forecasts, and their own judgement and experience in making investment decisions on what securities to buy, hold and sell. The opposite of active management is passive management, better known as "indexing".
Ancillary assets	Assets which are not the main assets of a company.
Appreciation	An increase in the market value of an asset, such as a stock, bond, commodity or piece of real estate, or in the value of one currency with respect to another. The opposite of depreciation.
Asset	Any item of economic value owned by an individual or corporation, especially that which could be converted to cash. Examples are cash, securities, accounts receivable, inventory, office equipment, real estate, a car, and other property. On a balance sheet, assets are equal to the sum of liabilities, common stock, preferred stock, and retained earnings.
Asset class	An asset class is a group of securities that exhibits similar characteristics, behaves similarly in the marketplace and is subject to the same laws and regulations. The three main asset classes are equities, or stocks; fixed income, or bonds; and cash equivalents, or money market instruments. Some investment professionals add real estate, commodities, and increasingly, cryptocurrencies such as Bitcoin, to the asset class mix.
Balance of payments	Statement of a country's net financial transactions with other countries over a defined period of time.
Balance sheet	Financial statement that provides a snapshot of what a company owns and owes, as well as the amount invested by shareholders.
Bankers' acceptance	A bankers' acceptance (BA) is a short-term credit investment created by a non-financial firm and guaranteed by a bank to make payment. Acceptances are traded at discounts from face value in the secondary market.
Benchmark	A standard against which the performance of a fund can be measured and compared (e.g. a stock market index such as the FTSE 100 or an interest rate, such as LIBOR).
Blue Chip company	The stock of a major company with a record of strong earnings, reliable dividend payments and steady share price performance. Blue chips are normally the largest capitalised stocks in a particular market and among the most widely traded.
Bond	A debt instrument issued for a period of more than one year with the purpose of raising capital by borrowing. Generally, a bond is a promise to repay the principal along with interest (coupons) on a specified date (maturity). Some bonds do not pay interest, but all bonds require a repayment of principal. When an investor buys a bond, he/she becomes a creditor of the issuer.
Buyback	A buyback, also known as a share repurchase, is when a company buys its own outstanding shares to reduce the number of shares available on the open market. Companies buy back shares for a number of reasons, such as to increase the value of remaining shares available by reducing the supply or to prevent other shareholders from taking a controlling stake.
Cash Equivalents	Cash equivalents are investments securities that are for short-term investing, and they have high credit quality and are highly liquid. These securities have a low-risk, low-return profile and include Treasury bills, certificates of deposit, bankers' acceptances, commercial papers and other money market instruments.
Certificates of deposit (CDs)	Interest-bearing certificate issued by a bank to a depositor. Interest is paid at maturity.
Collective investment scheme	A type of investment scheme that involves collecting money from different investors and then combining all the money collected to fund the investment.
Compound interest	Earning interest on interest, or, more precisely, the interest earned on the sum of the principal amount and the interest already accumulated. A return on an investment is compounded if it takes into account compound interest, i.e. the interest is reinvested.

Man Funds plc

Investment Managers' reports (continued)

GLOSSARY (continued)

Commercial paper	A type of borrowing by companies and institutions in the form of loans where lenders do not have the right to take the assets of the borrower if they fail to repay. These loans are given for a period of a year or less.
Commodity	A good produced in bulk. Many commodities, such as coffee, meat and grain, and raw materials such as metals and oil, are traded on local, regional and/or international markets called commodity exchanges, either on a spot basis or through futures contracts, which allow the purchase or sale of a commodity at a predetermined price on a particular date in the future.
Common stock	See <i>Ordinary shares</i>
Consumer staples	Consumer staples are essential products, such as food, beverages, tobacco and household items. Consumer staples are goods that people are unable or unwilling to cut out of their budgets regardless of their financial situation (Investopedia).
Convertible bond	A bond issued by a company that has a set maturity date and pays interest in the form of a coupon. It has features of both a bond and stock and its valuation reflects both types of investments. It gives the holder the option to convert the bond into a specific number of shares of the issuing company – in other words, it has an 'embedded option'.
Corporate Bond	A bond issued by a company.
Coupon	A term used to refer to the interest paid by a bond. It derives from the fact that bonds used to be issued as bearer documents (i.e. certificates which do not identify the owner) with dated coupons attached to them. These were cut off the document when the payment of the interest was due and taken to a paying agent for the interest to be paid.
Country risk	Country risk is a term for the risks involved when someone invests in a particular country. Country risk varies from one country to the next, and can include political risk, exchange-rate risk, economic risk, and transfer risk. In particular, country risk denotes the risk that a foreign government will default on its bonds or other financial commitments. In a broader sense, country risk is the degree to which political and economic unrest affect the securities of issuers doing business in a particular country.
Credit rating	Ratings issued by credit ratings agencies which represent the agency's evaluation of qualitative and quantitative information for a company or government. Ratings are used to rank companies and governments on the probability of them defaulting on their obligations (i.e. to repay their debts).
Credit risk	Usually used when referring to investment in bonds, credit risk is the risk of a loss deriving from the inability of the issuer of a bond to make the interest payments and repay the capital at the end of the life of the bond in full and as scheduled. 'Triple A' or 'investment grade rated' are assessed as being the lowest credit risk while non-investment grade bonds – also known as high-yield debt (or 'junk bonds') – are assessed as the highest credit risk. The higher the credit risk, the higher the interest rate the borrower will have to attract lenders.
Currency forward	A binding contract in the foreign exchange market that locks in the exchange rate for the purchase or sale of a currency on a future date. A currency forward is essentially a hedging tool that does not involve any upfront payment.
Current account (Balance of payment current account)	Movements of money into and out of a country, relating to trade between private individuals, for example workers sending money to their families in another country. The current account includes the visible balance of trade (the net difference between exports and imports of merchandise goods) and the invisible trade balance (payments and receipts for services such as shipping, banking and tourism).
Debt security	Debt security refers to a debt instrument, such as a government bond, corporate bond, certificate of deposit (CD), municipal bond or preferred stock, that can be bought or sold between two parties and has basic terms defined, such as notional amount (amount borrowed), interest rate, and maturity and renewal date.
Deflation	Deflation is the general decline in prices for goods and services occurring when the inflation rate falls below 0%. Deflation happens naturally when the money supply of an economy is fixed. In times of deflation, the purchasing power of currency and wages are higher than they otherwise would have been.
Derivatives	Financial contracts such as futures, options and various securities that offer 'synthetic' access to an underlying asset such as a commodity, stock market or fixed income security. The price movements of a derivative generally follow the price movements of the underlying asset but derivatives generally require only small amounts of capital (margin) to gain exposure to the underlying asset.

Man Funds plc

Investment Managers' reports (continued)

GLOSSARY (continued)

Developed markets	Countries that have sound, well-established economies with a high level of economic growth and security. They are therefore thought to offer safer, more stable investment opportunities than developing markets.
Dividend	A dividend is the distribution of reward from a portion of company's earnings, and is paid to a class of its shareholders. Dividends are decided and managed by the company's board of directors, though they must be approved by the shareholders through their voting rights. Dividends can be issued as cash payments, as shares of stock, or other property, though cash dividends are the most common.
Dividend yield	See <i>Yield (3rd definition)</i>
Earnings per Share (EPS)	Profit, net of tax and dividends to preferred shareholders, divided by the total amount of ordinary shares outstanding. Most income statements include a calculation of earnings per share. This calculation tells you how much money shareholders would receive for each share of stock they own if the company distributed all of its net income for the period. In reality, however, companies would not distribute all of their earnings. Usually they reinvest them in the business.
Emerging markets	Emerging market is a term use to describe a developing country, in which investment would be expected to achieve higher returns but be accompanied by greater risk. Global index providers sometimes include in this category relatively wealthy countries whose economies are still considered underdeveloped from a regulatory point of view.
Equity	An ownership right representing an interest in a company.
Equity Swaps	An equity swap is an arrangement made in a futures contract whereby differences in settlement are made through cash payments, rather than by the delivery of physical goods or securities. This is generally an easier method of settlement, because both losses and gains are paid in cash. Equity swaps provide investors with the all the benefits and risks of owning a security without actually owning it.
Equity-linked security	A type of debt instrument whereby the return is linked to the performance of a group of underlying stocks or equities that are also linked to the security.
EPS	See <i>Earnings per share</i>
Exchange Traded Funds (ETFs)	Index-tracking funds that can be traded on exchanges just like a stock – so they combine the diversified holdings of a fund with the low cost and tradability of a share.
Exposure	Exposure (or market exposure) refers to the currency amount of funds, or percentage of a portfolio, invested in a particular type of security, market sector or industry, which is usually expressed as a percentage of total portfolio holdings. It represents the amount an investor can lose from the risks unique to a particular investment.
External account	See <i>Current account</i>
Financial Derivative instruments	See <i>Derivatives</i>
Fixed income	Term used to denote bonds and other debt instruments, because they normally pay a fixed interest rate.
Foreign exchange	Foreign exchange is the exchange of one currency for another or the conversion of one currency into another currency. Foreign exchange also refers to the global market where currencies are traded virtually around the clock.
Forward contract	A forward contract is a customised contract between two counterparties to buy or sell a specific asset on a future date at an agreed price. As opposed to stocks and bonds, a forward contract is a derivative instrument, the value of which depends on an underlying asset. Unlike standard futures contracts, forward contracts are not traded on a centralised exchange and are highly customisable.
Free Cash Flow (FCF)	The cash a company has after all outgoings, including dividends, debt payments, tax, operating costs and capital expenditure.
Fund Sector	Funds are into sectors to facilitate comparisons between funds with similar investment objectives and types of investment.
Futures contract	An agreement to buy or sell a stated amount of a security, currency or commodity at a specific future date and at a pre-agreed price.
GDP	See <i>Gross Domestic Product</i>

Man Funds plc

Investment Managers' reports (continued)

GLOSSARY (continued)

GNP	See <i>Gross National Product</i>
Government Bond	Bonds issued by a government.
Gross Domestic Product (GDP)	The total value of an economy's domestic output of goods and services, which is one of the key indicators of economic growth with GNP.
Gross National Product (GNP)	Same as GDP except that it adds what a country earns from overseas investments and subtracts what foreigners earn in a country and send back home.
Index	An index is a portfolio of stocks, chosen according to simple, pre-defined rules, and designed to capture a particular investment style.
Inflation	Rate at which the general level of prices for goods and services is rising and, consequently, the purchasing power of currency is falling.
Interest rate	Interest rate is the amount charged, expressed as a percentage of principal, by a lender to a borrower for the use of assets. Interest rates are typically noted on an annual basis, known as the annual percentage rate (APR). The assets borrowed could include cash, consumer goods, and large assets such as a vehicle or building.
Liquidity	A relative term to describe the speed at which an asset or assets can be converted into cash (liquidated) and vice versa.
Liquid asset	A liquid asset is an asset that can be converted into cash speedily, with little impact to the price received in the open market. Liquid assets include money market instruments and government bonds.
Listed	In relation to the shares of a company, or some funds, when those shares have been accepted for trading on an exchange they are referred to as 'listed' investments. The exchange will have 'listing requirements', which all companies/funds must meet before they are 'accepted for listing'. The opposite of listed is over-the-counter.
Local currency	The most commonly form of currency used in a country. This usually encompasses the national currency of the country.
Long position	A security that is bought in expectation that it will rise in value.
Market capitalisation	Market value of a company's issued share capital – in other words, the number of shares multiplied by the current price of those shares on the stock market. Companies are ranked as large-cap, mid-cap and small-cap depending on their market capitalisation (market cap), though the actual criteria for classification depend on the market concerned.
Maturity date	The maturity date is the date on which the principal amount of a debt instrument becomes due and is repaid to the investor and interest payments stop.
Money market instruments	Instruments used by government and companies and others who wish to borrow money for short periods, usually less than a year. They are also called short term debt instruments. They include certificates of deposit, commercial paper and short term gilts.
Municipal Bond	A bond issued by a state or local government (or related entities) in the US to cover capital expenditures.
Option	A derivative instrument that gives the holder the right, without obligation, to buy (call) or sell (put) a security or asset at a fixed price within a specified period or at a particular future date.
Ordinary shares	Securities (called common stock in the US) that confer ownership in a publicly listed company. Holders are entitled to the dividends declared by the company and have the right to vote on the appointment of directors and other important matters. However they rank below holders of preferred shares.
Over the counter (OTC)	Generally refers to a stock (but can also refers to other financial instruments) that is not listed on an exchange and traded via a dealer network.
Overvalued	When a share price or market is trading at levels above those justified by fundamentals.
Overweight	Investment portfolio that holds an excess amount of a particular security when compared to the security's weight in the underlying benchmark portfolio. Actively managed portfolios will make a security overweight when doing so allows the portfolio to achieve excess returns. Overweight can also refer to an investment analyst's opinion that the security will outperform its industry, its sector or the entire market.

GLOSSARY (continued)

Passive management	Passive management is a style of management where a fund's portfolio mirrors a market index. Passive management is the opposite of active management. Passive management is also referred to as "passive strategy," "passive investing" or "index investing."
P/B Ratio	See <i>Price-to-Book Ratio</i>
Preference shares	Also called preferred shares. Shares that entitle the holder to a fixed-rate dividend, paid before any dividend is distributed to holders of ordinary shares.
Preferred stock	See <i>Preference shares</i>
Price-to-Book Ratio (P/B ratio)	The P/B ratio reflects the value that market participants attach to a company's equity relative to its book value (total assets minus total liabilities) of equity. A stock's market value is a forward-looking metric that reflects a company's future cash flows. The book value of equity is an accounting measure based on the historic cost principle, and reflects past issuances of equity, augmented by any profits or losses, and reduced by dividends and share buybacks. The higher the ratio, the higher the premium the market is willing to pay for the company above its hard assets. A low ratio may signal a good investment opportunity, but it could also mean something is fundamentally wrong with the company. The ratio is less meaningful for some types of companies, such as those in technology sectors. This is because such companies have hidden assets such as intellectual property which are of great value, but not reflected in the book value.
Primary market	The market for new securities issues. In the primary market the security is purchased directly from the issuer.
Quantitative analysis	Quantitative analysis (QA) is a technique that seeks to understand behaviour by using mathematical and statistical modelling, measurement, and research. Quantitative analysts aim to represent a given reality in terms of a numerical value. Quantitative analysis is employed for several reasons, including measurement, performance evaluation or valuation of a financial instrument, and predicting real-world events, such as changes in a country's gross domestic product (GDP).
Quantitative easing (QE)	Quantitative easing is an unconventional monetary policy in which a central bank purchases government securities or other securities from the market in order to lower interest rates and increase the money supply. Quantitative easing increases the money supply by flooding financial institutions with capital in an effort to promote increased lending and liquidity. When short-term interest rates are at or approaching zero, and when the printing of new banknotes isn't an option, quantitative easing can be considered.
Quantitative trading	A form of investing in which computers are used to sort through financial data and identify predictable patterns. Quantitative traders take advantage of modern technology, mathematics and the availability of comprehensive databases for making rational trading decisions to identify trading opportunities.
Reference index	An index used as a benchmark for performance comparison purposes but which is not a formal benchmark as per fund's prospectus.
Return on capital	The profit on an investment in relation to the amount invested which is not considered as a taxable event and not taxed as income.
Risk-adjusted return	Risk-adjusted return defines an investment's return by measuring how much risk is involved in producing that return, which is generally expressed as a number or rating. Risk-adjusted returns are applied to individual securities, investment funds and portfolios.
Secondary market	A market in which an investor purchases a security from another investor rather than the issuer, subsequent to the original issuance in the primary market.
Sector	A sector is an area of the economy in which businesses share the same or a related product or service. It can also be thought of as an industry or market that shares common operating characteristics. Dividing an economy into different pieces allows for more in-depth analysis of the economy as a whole.
Share	See <i>Equity</i>
Short position	Fund managers use this technique to borrow a security and then sell it with the intention of buying it back for less when the price falls. The position profits if the security falls in value. Within UCITS funds, derivatives – such as equity swaps – can be used to simulate a short position.
Security	A general term for stocks, bonds, options, subscription rights, warrants and other tradable investments that confer a right to income or ownership.
Sovereign debt	Sovereign debt is a central government's debt. It is debt issued by the national government in a foreign currency in order to finance the issuing country's growth and development. The stability of the issuing government can be provided by the country's sovereign credit ratings which help investors weigh risks when assessing sovereign debt investments.
Sovereign risk	See <i>Country Risk</i>

Man Funds plc

Investment Managers' reports (continued)

GLOSSARY (continued)

Stock	See <i>Equity</i>
Stock option	The right to buy or sell a particular stock at a given price on or after a certain date. Stock options are often used as an employee incentive at start-ups or large public companies.
Swap	An exchange of streams of payments between two parties, typically in order to reduce interest rate or currency risk.
Synthetic	Term given to financial instruments that are created artificially by simulating other instruments with different cash flow patterns. Synthetic products are structured to suit the cash flow needs of the investor. They are created in the form of a contract and, therefore, given the name "synthetic".
Transferable security	Any security that can be traded in the capital markets.
Treasury bill (T-bill)	A Treasury Bill (T-Bill) is a short-term debt obligation backed by the Treasury Department of the U.S. government with a maturity of less than one year, sold in denominations of \$1,000 up to a maximum purchase of \$5 million on non-competitive bids. T-bills have various maturities and are issued at a discount from par. Investors do not receive regular interest payments but a T-Bill does include interest, reflected in the amount it pays when it matures.
Total output	The total amount of goods and services produced within an economy.
Total return	Total return is the full return on an investment over a given period, including the income generated from dividend, interest or rental payments, and any gains or losses from a change in the asset's market value. This is normally expressed as a percentage of the purchase cost, annualised if the period is less than a year.
Undervalued	When a share price or market is trading at levels below those justified by fundamentals.
Underweight	An underweight portfolio does not hold a sufficient amount of a particular security when compared to the weight of that security held in the underlying benchmark portfolio. Underweight can also refer to an analyst's opinion regarding the future performance of a security in scenarios where it is expected to underperform.
Volatility	The extent to which the price of a security or commodity, or the level of a market, interest rate or currency, changes over time. High volatility implies rapid and large upward and downward movements over a relatively short period of time; low volatility implies much smaller and less frequent changes in value.
Warrant	A financial instrument, normally attached to a bond or other security, that entitles the holder to purchase a certain amount of ordinary shares at a fixed price for a period of years or to perpetuity. The price at which the underlying shares can be bought or sold is referred to as the exercise price or strike price.
Yield	1. The annual rate of return on an investment, expressed as a percentage. 2. For bonds and notes, the coupon rate divided by the market price. This is not an accurate measure of total return, since it does not factor in capital gains. 3. For securities, the annual dividends divided by the purchase price. This is not an accurate measure of total return, since it does not factor in capital gains. here, also called dividend yield or current yield.

Man Funds plc

Condensed notes to the unaudited financial statements For the six month period ended 30 June 2026

1. General

Man Funds plc (the “Fund”) was incorporated as an investment company with variable capital and with segregated liability between sub-funds under the laws of Ireland as a public limited company on 1 August 1996 under registration number 252520. The Fund has been authorised by the Central Bank of Ireland (the “Central Bank”) as an Undertaking for Collective Investment in Transferable Securities (“UCITS”), pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, (as amended), (the “UCITS Regulations”) and Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (the “Central Bank UCITS Regulations”). The Fund’s investment managers are GLG Partners LP for Man GLG Portfolios, GLG LLC for GLG LLC Portfolios and Numeric Investors LLC for Man Numeric Portfolios (the “Investment Managers”). The Fund’s registered office is at 70 Sir John Rogerson’s Quay, Dublin 2, Ireland. The Fund has no employees.

The Fund is structured as an umbrella fund with segregated liability between sub-funds (each a “Portfolio”) which means that different Portfolios may be created from time to time by the Directors with the approval of the Central Bank. Each Portfolio will be represented by a different series of Redeemable Participating Shares and will be invested in accordance with the investment objectives and policies applicable to such Portfolio. As at 30 June 2026, the Fund was comprised of twenty-two Portfolios, of which twenty-one were in operation:

Man GLG Portfolios

- Man Global Convertibles;
- Man Japan CoreAlpha Equity;
- Man Pan-European Equity Growth (ceased operations on 21 April 2026);
- Man Asia (ex Japan) Equity;
- Man Global Investment Grade Opportunities;
- Man China Equity;
- Man Dynamic Income;
- Man Asia Credit Opportunities;
- Man Euro Corporate Bond;
- Man Global Climate Transition Impact Bond;
- Man Emerging Markets Corporate Credit Opportunities; and
- Man Global Credit Value.

Man Numeric Portfolios

- Man Systematic Emerging Markets Equity;
- Man Systematic Europe;
- Man Systematic China A Equity;
- Man Systematic US High Yield;
- Man Systematic Global Core Equities;
- Man Systematic European Equity (launched on 15 May 2026); and
- Man Systematic US Equity (launched on 21 May 2026).

GLG LLC Portfolios

- Man Global Emerging Markets Local Currency Rates;
- Man Global Emerging Markets Bond; and
- Man Global Resources Equity.

As at 31 June 2026, the following Portfolios were registered with the Swiss Financial Market Supervisory Authority (“FINMA”):

- Man Global Convertibles;
- Man Japan CoreAlpha Equity;
- Man Systematic Emerging Markets Equity;
- Man Global Emerging Markets Local Currency Rates;
- Man Global Emerging Markets Bond;
- Man Pan-European Equity Growth (ceased operations on 24 April 2026);
- Man Systematic Europe;
- Man Systematic China A Equity;
- Man Asia (ex Japan) Equity;
- Man Systematic US High Yield;
- Man Global Investment Grade Opportunities;
- Man China Equity;
- Man Dynamic Income;
- Man Asia Credit Opportunities;
- Man Euro Corporate Bond;
- Man Global Climate Transition Impact Bond;
- Man Emerging Markets Corporate Credit Opportunities;
- Man Global Resources Equity;
- Man Systematic Global Core Equities;
- Man Global Credit Value;
- Man Systematic European Equity (launched on 15 May 2026); and
- Man Systematic US Equity (launched on 21 May 2026).

All Classes of Redeemable Participating Shares are together referred to as the “Redeemable Participating Shares” or “Shares”.

Man Funds plc

Condensed notes to the unaudited financial statements (continued)
For the six month period ended 30 June 2026

1. General (continued)

The investment objectives and policies of each active Portfolio are detailed below.

Man Global Convertibles

Man Global Convertibles' investment objective is to achieve compounded appreciation of the investor's capital through investing globally in an actively managed portfolio of convertible bonds, convertible preference shares, debt securities, warrants and other equity-linked securities, which may include but are not limited to such instruments as stock options and equity swaps, with less volatility than a portfolio of the underlying equities in the international securities markets.

Man Japan CoreAlpha Equity

Man Japan CoreAlpha Equity's investment objective is to provide a high total return for a suitable long term appreciation of the investor's capital. The Portfolio invests primarily in securities of issuers in Japan or of issuers which derive a substantial part of their revenues from activities in Japan.

Man Systematic Emerging Markets Equity

Man Systematic Emerging Markets Equity's investment objective is to earn a return on investment greater than the returns available from investments in the MSCI Emerging Markets Index. The Portfolio will seek to achieve its objective by using Numeric's proprietary quantitative models to select securities for purchase or sale in order to allocate all or substantially all of its assets in accordance with the Man Numeric Emerging Markets strategy which involves taking long positions in relation to issuers primarily in emerging markets throughout the world, that represent, in the judgement of Numeric, an opportunity for short-term investment gains.

Man Global Emerging Markets Local Currency Rates

Man Global Emerging Markets Local Currency Rates' investment objective is to achieve a return over the long term primarily through investment in a portfolio of emerging markets local currency bonds, foreign exchange forwards and/or other derivatives. The Portfolio primarily invests in bonds and currency forwards.

Man Global Emerging Markets Bond

Man Global Emerging Markets Bond's investment objective is to achieve a return in all market conditions primarily through investment in emerging market fixed income securities directly, or indirectly via the use of derivatives. The Portfolio primarily invests in bonds.

Man Pan-European Equity Growth

Man Pan-European Equity Growth's investment objective is to provide medium to long term capital appreciation. The Portfolio is a concentrated long-only fund which invests in European companies across all market capitalisations.

The Portfolio ceased operations on 21 April 2026.

Man Systematic Europe

Man Systematic Europe's investment objective is to earn a return on investment greater than the returns available from investments in the MSCI Europe Index. The Portfolio will seek to achieve its objective by using Numeric's proprietary quantitative models to select securities for purchase or sale in order to allocate all or substantially all of its assets in accordance with the Man Numeric European Core strategy. The strategy involves taking long positions in relation to issuers in the countries included in the MSCI Europe Index, and in the judgement of Numeric, represent an opportunity for short-term investment gains.

The Portfolio will be constrained to have approximately 50% less carbon intensity than the benchmark and will have overall projected carbon emissions that are aligned with the 2 degrees Celsius target (as set in the Paris Agreement of 12 December 2015). Stocks are selected using a combination of three primary model groups: 1) Climate; 2) Environmental, Social and Governance ("ESG"); and 3) Fundamental Investment Themes.

Man Systematic China A Equity

Man Systematic China A Equity's investment objective is to earn a return on investment greater than the returns available from investments in the MSCI China A Net Return Index USD. The Portfolio will seek to achieve its objective by using Numeric's proprietary quantitative models to select equity securities for purchase or sale in order to allocate all or substantially all of its assets in accordance with the Man Numeric China strategy. The strategy involves taking long positions in relation to issuers in China, that represent, in the judgement of Numeric, an opportunity for investment gains in respect of China A Shares.

Man Asia (ex Japan) Equity

Man Asia (ex Japan) Equity's investment objective is to provide medium to long-term capital appreciation. The Portfolio will seek to achieve its objective by allocating all or substantially all of its net proceeds of Shares in (i) transferable securities (ii) exchange-traded and OTC financial derivative instruments, (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents. At least 51% of the value of the Portfolio will be invested on an ongoing basis in holdings in equity securities that are authorised for official trading on a stock exchange or included in an organised market.

Man Systematic US High Yield

Man Systematic US High Yield's investment objective is to earn a return on investment greater than the returns available from investments in the ICE BAML US High Yield Index. The Portfolio will seek to achieve its objective by using Numeric's proprietary quantitative models to select securities for purchase or sale in order to allocate all or substantially all of its assets in accordance with the Man Numeric U.S. High Yield strategy (the "US High Yield Strategy"). The strategy involves taking long positions primarily in US dollar denominated high yield corporate bonds listed or traded on recognised markets in the US.

Man Funds plc

Condensed notes to the unaudited financial statements (continued)

For the six month period ended 30 June 2026

1. General (continued)

Man Global Investment Grade Opportunities

Man Global Investment Grade Opportunities' investment objective is to provide income and capital growth over the medium to long term. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) exchange traded and OTC financial derivative instruments, (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

Man China Equity

Man China Equity's investment objective is to provide medium to long-term capital appreciation. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) exchange-traded and OTC financial derivative instruments, (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents. At least 51% of the value of the Portfolio will be invested on an ongoing basis in holdings in equity securities that are authorised for official trading on a stock exchange or included in an organised market.

Man Dynamic Income

Man Dynamic Income's investment objective is to provide income and capital growth over a medium to long-term period by investing predominantly in bonds issued by companies and governments worldwide. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) exchange traded and OTC financial derivative instruments, (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

Man Asia Credit Opportunities

Man Asia Credit Opportunities' investment objective is to provide an absolute return to investors through investing in diversified portfolio of predominantly Asian securities. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) money market instruments, (iii) exchange traded and OTC financial derivative instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

Man Euro Corporate Bond

Man Euro Corporate Bond's investment objective is to provide income and capital growth over the medium and long term. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) exchange traded and OTC financial derivative instruments (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

Man Global Climate Transition Impact Bond

Man Global Climate Transition Impact Bond's sustainable investment objective is to support the financing of climate solutions with a view to contributing to the decarbonisation of the global economy and the mitigation of and/or adaptation to the adverse impact of climate change, while providing a long-term total return to investors.

Man Emerging Markets Corporate Credit Opportunities

Man Emerging Markets Corporate Credit Opportunities' sustainable investment objective is to provide income and capital growth over the medium to long term.

Man Global Resources Equity

Man Global Resources Equity's investment objective is to provide long-term capital growth through investments in portfolio of companies primarily engaged in natural resources and natural resources-related businesses (listed or traded on recognised markets).

Man Systematic Global Core Equities

Man Systematic Global Core Equities' investment objective is to earn a return on investment greater than the returns available from investments in the MSCI World Index.

Man Global Credit Value

Man Global Credit Value's investment objective is to provide income and capital growth over a medium to long term investment period.

Man Systematic European Equity

Man Systematic European Equity's investment objective is to earn a return on investment greater than the returns available from investments in the MSCI Europe Index.

Man Systematic US Equity

Man Systematic US Equity's investment objective is to earn a return on investment greater than the returns available from investments in the S&P 500 Index.

Man Funds plc

Condensed notes to the unaudited financial statements (continued) For the six month period ended 30 June 2026

2. Material accounting policies

(a) Accounting convention

The unaudited financial statements have been prepared in accordance with International Accounting Standard 34: Interim Financial Reporting ("IAS 34") as adopted by the European Union ("EU"). The unaudited financial statements have been prepared using the historical cost basis except for financial assets and liabilities at fair value through profit or loss that have been measured based on fair value.

The unaudited financial statements do not include all the information and disclosures required in the annual financial statements, and should be read in conjunction with the Fund's audited annual financial statements as at 31 December 2025 which have been prepared in accordance with International Financial Reporting Standards ("IFRS") as adopted by the EU. These unaudited interim financial statements have been compiled using accounting policies, methods of computation and presentation which are consistent with the audited annual financial statements for the year ended 31 December 2025, unless otherwise stated.

The preparation of unaudited financial statements in accordance with IFRS requires management to make judgements, estimates and assumptions that affect the amounts reported and disclosures made in these unaudited financial statements and accompanying notes, including certain valuation assumptions. Uncertainty about these assumptions and estimates could result in outcomes that require a material adjustment to the carrying amount of assets or liabilities in the future.

The combined fund balances are expressed in United States dollar ("US\$"), being the presentation currency of the Fund as a whole. For combined fund balances in the unaudited statement of financial position, the non-US\$ Portfolios are translated using the exchange rate at the date of the unaudited statement of financial position. For combined fund balances in the unaudited statement of comprehensive income, the non-US\$ Portfolios are translated at the average exchange rate prevailing during the period. The combined subscriptions and redemptions in the unaudited statement of changes in net assets are also translated at the average rate prevailing during the current period. The translation gain/(loss) resulting from the preparation of the combined fund balances in the unaudited financial statements amounting to US\$154,458,767 (30 June 2025: US\$283,587,318) has been shown in the combined fund column of the unaudited statement of comprehensive income. The gain/loss does not have any effect on the individual Portfolios.

(b) Changes in accounting policy and disclosure

New standards, interpretations and amendments adopted by the Fund:

There were no recent accounting pronouncements applicable to the Fund in the current period.

At the date of authorisation of the financial statements there were a number of other standards and interpretations which were in issue but not yet effective. Management anticipates that the adoption of these standards and interpretations in future periods will have no material impact on the financial statements of the Fund.

3. Cash and cash equivalents, bank overdraft, collateral balances with brokers, collateral balances due to brokers and due from/to brokers

At the period end, amounts disclosed as cash and cash equivalents, bank overdraft, collateral balances with brokers and collateral balances due to brokers were held at The Bank of New York Mellon (London Branch), Barclays Plc, BNP Paribas, Citibank N.A., Goldman Sachs International, JP Morgan Securities Plc, Morgan Stanley & Co. International Plc, Natixis SA, Nomura Holdings and Societe Generale. Collateral balances with brokers represent the margin account balances held with the broker and collateral balances due to broker represents an amount payable to broker as a result of margin or collateral amount payable at the period end. These include amounts transferred as collateral (which is subject to a security interest) against open derivatives, short positions or financial instruments purchased on margin, deposits held at call with banks and other short term highly liquid investments with original maturities of three months or less.

Included in cash and cash equivalents balances at 30 June 2026 are US T-bills with, a fair value of US\$Nil (cost: US\$Nil) (31 December 2025: US\$28,440,455 (cost: US\$28,396,772)) for Man Systematic Emerging Markets Equity, fair value of US\$Nil (cost: US\$Nil) (31 December 2025: US\$124,263 (cost: US\$123,941)) for Man Global Emerging Markets Local Currency Rates, fair value of US\$Nil (cost: US\$Nil) (31 December 2025: US\$2,924,275 (cost: US\$2,916,106)) for Man Global Emerging Markets Bond, fair value of US\$29,889,030 (cost: US\$29,831,743) (cost: US\$Nil) (31 December 2025: US\$79,954,160 (cost: US\$79,455,372)) for Man Asia (ex Japan) Equity, fair value of US\$Nil (cost: US\$Nil) (31 December 2025: US\$49,832,940 (cost: US\$49,823,600)) for Man Global Investment Grade Opportunities, fair value of US\$99,527,605 (cost: US\$99,405,628) (31 December 2025: US\$399,146,803 (cost: US\$396,997,167)) for Man Dynamic Income, fair value of US\$199,153 (cost: US\$198,570) (31 December 2025: US\$99,616 (cost: US\$99,585)) for Man Asia Credit Opportunities, fair value of US\$22,923,603 (cost: US\$22,887,577) (31 December 2025: US\$28,890,819 (cost: US\$28,884,566)) for Man Euro Corporate Bond and fair value of US\$7,713,440 (cost: US\$7,690,750) (31 December 2025: US\$Nil (cost: US\$Nil)) for Man Systematic Global Core Equities.

4. Financial assets and liabilities at fair value through profit or loss

Fair value of financial instruments

The Fund classifies fair value measurements using a fair value hierarchy that reflects the significance of the inputs used in determining the measurements in line with IFRS 13, *Fair Value Measurement*.

The fair value hierarchy has the following levels:

- Level 1 – Quoted market price in an active market for an identical instrument.
- Level 2 – Valuation techniques based on observable inputs. This category includes instruments valued using: quoted market prices in active markets for similar instruments; quoted prices for similar instruments in markets that are considered less than active; or other valuation techniques where all significant inputs are directly or indirectly observable from market data.
- Level 3 – Valuation techniques using significant unobservable inputs. This category includes all instruments where the valuation technique includes inputs not based on observable data and the unobservable inputs could have a significant impact on the instrument's valuation. This category includes instruments that are valued based on quoted prices for similar instruments where significant unobservable adjustments or assumptions are required to reflect differences between the instruments.

Valuation techniques

Listed or publicly traded investment in equity and debt securities, government bonds, managed funds and derivatives

When fair values of listed securities and debt securities at the reporting date, as well as publicly traded derivatives, are based on quoted market prices or binding dealer price quotations, without any deduction for transaction costs, the instruments are included within Level 1 of the hierarchy.

Unlisted debt securities and treasury bills

The Fund invests in debt securities, corporate and government bonds and treasury securities. In the absence of a quoted price in an active market, they are valued using observable inputs such as recently executed transaction prices in securities of the issuer or comparable issuers and yield curves. Adjustments are made to the valuations when necessary to recognise differences in the instruments terms. To the extent that the significant inputs are observable, the Fund categorises these investments as Level 2.

Unlisted asset-backed securities

The fair values of investments in asset-backed securities, for which there is currently no active market, are calculated using a valuation model which is accepted in the industry. The most frequently applied valuation techniques include forward pricing and swap models, using present value calculations. The models incorporate various inputs including both credit and debit valuation adjustments for counterparty and own credit risk, foreign exchange spot and forward rates and interest rate curves. For these financial instruments, significant inputs into models are market observable and are included within Level 2.

Over-the-counter derivatives

The Fund uses widely recognised valuation models for determining fair values of over-the-counter derivatives. The most frequently applied valuation techniques include forward pricing and swap models, using present value calculations. The models incorporate various inputs including both credit and debit valuation adjustments for counterparty and own credit risk, foreign exchange spot and forward rates and interest rate curves. For these financial instruments, significant inputs used are market observable and are included within Level 2.

Man Funds plc

Condensed notes to the unaudited financial statements (continued)

For the six month period ended 30 June 2026

4. Financial assets and liabilities at fair value through profit or loss (continued)

Fair value of financial instruments (continued)

For all other financial instruments, fair value is determined using valuation techniques. Valuation techniques include net present value techniques, comparison to similar instruments for which market observable prices exist, options pricing models and other relevant valuation models.

The following tables summarise the financial instruments at fair value through profit or loss as at 30 June 2026 and 31 December 2025 and the financial instruments measured at fair value in the statement of financial position grouped into the fair value hierarchy:

Total derivatives	3,960	-	-	3,960
Total financial assets at fair value through profit or loss	36,671,414	-	-	36,671,414

Man Systematic US Equity commenced its operations on 21 May 2026. Hence, there were no investments as at 31 December 2025.

Short term balances are excluded from the tables as their carrying value at the period end approximates their fair value.

Investments are reviewed at each financial reporting point to ensure that they are correctly classified between Level 1, 2 and 3 in accordance with the fair value hierarchy outlined above. Where an investment's characteristics changed during the period and investments no longer meet the criteria of a given level, they are transferred into a more appropriate level at the end of the relevant financial reporting period.

For the period/year ended 30 June 2026 and 31 December 2025, there were no transfers between Level 1 and Level 2.

All net realised and unrealised gains/(losses) in the tables above are reflected in the accompanying unaudited statement of comprehensive income. The net amount of US\$651,753 (31 December 2025: US\$164,482) for Man Global Convertibles, US\$ 2,826,429 (31 December 2025: US\$Nil) for Man Systematic Emerging Markets Equity, US\$ 668,918 (31 December 2025: US\$341,838) for Man Global Investment Grade Opportunities, US\$700,168 (31 December 2025: US\$327,204) for Man Dynamic Income, €145,061 (31 December 2025: US\$64,276) for Man Euro Corporate Bond, (US\$121,355) (31 December 2025: US\$67,366) for Man Emerging Markets Corporate Credit Opportunities and (US\$514,837) (31 December 2025 : US\$291,225) for Man Global Credit Value relates to those Level 3 financial instruments held by the Fund at 30 June 2026 and 31 December 2025 and is reflected in net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the unaudited statement of comprehensive income.

Man Funds plc

Condensed notes to the unaudited financial statements (continued)
For the six month period ended 30 June 2026

4. Financial assets and liabilities at fair value through profit or loss (continued)

Fair value of financial instruments (continued)

The fair value of investments classified within Level 3 is based on unobservable inputs that may be subject to significant variability. Because of the inherent uncertainty of valuation with respect to such investments, the Fund's estimates of fair value may differ significantly from fair values that would have been used had observable inputs been available for the valuation of such investments, and the differences could be material.

The tables below disclose the valuation techniques used in the valuation of Level 3 investments and quantifies the effect of significant unobservable inputs used to value investments that fall in this category. The ranges of these fair value are not representative of the appropriate inputs to use when calculating the fair value of any one Level 3 asset or liability. Accordingly, the ranges of fair value presented below do not represent uncertainty in, or possible ranges of fair value measurements of the Fund's Level 3 assets/liabilities.

The fair value impact of the discount range disclosed above is the Investment Manager's assessment of the range of possible illiquidity discounts.

Man Funds plc

Condensed notes to the unaudited financial statements (continued)
For the six month period ended 30 June 2026

4. Financial assets and liabilities at fair value through profit or loss (continued)

Fair value of financial instruments (continued)

Forward currency contracts

As part of its portfolio management techniques, the Fund may use forward currency contracts to economically hedge any non-functional currency exposure (although formal hedge accounting is not used). Forward currency contracts may also be used for trading purposes. Forward contracts entered into by the Fund represent a firm commitment to buy or sell an underlying asset, or currency at a specified value and point in time based upon an agreed or contracted quantity.

Forward currency contracts may expose the Fund to the risks associated with the absence of an exchange market on which to close out an open position. The investment managers closely monitor the Fund's exposure under forward currency contracts as part of the overall management of the Fund's market risk.

Derivative financial instruments

The Fund may trade derivative financial instruments, including futures, forward currency contracts, ASCOTs, credit default swaps, equity swaps, interest rate swaps and total return swaps whose values are based upon an underlying asset, index, currency or interest rate.

The Fund is subject to both market and credit risk in trading derivative financial instruments. Market risk is the potential for changes in value due to changes in market interest rates, foreign exchange rates, indices and changes in the value of the underlying financial instruments. Credit risk is the possibility that a loss may occur if a counterparty fails to perform according to the terms of the contract. Substantially all derivative contracts are transacted on a margin basis. Such transactions may expose the Fund to significant off-balance sheet risk in the event margin deposits and collateral investments are not sufficient to cover losses incurred.

The Investment Managers manage the risk associated with these transactions by maintaining margin deposits and collateral investments with its brokers in compliance with individual exchange regulations and internal guidelines. The Investment Managers also take an active role in managing and controlling the Fund's market and counterparty risks and monitoring trading activities and margin levels daily, and, as necessary, deposits additional collateral or reduces positions.

Credit default swaps are contracts in which the Fund pays or receives an interest flow in return for the counterparty accepting or selling all or part of the risk of default or failure to pay of a reference entity on which the swap is written. Where the Fund has bought protection, the maximum potential loss is the value of the interest flows the Fund is contracted to pay until maturity of the contract. Where the Fund has sold protection, the maximum potential loss is the nominal value of the protection sold. As at 30 June 2026, the maximum potential payout under credit default swaps where the Portfolio has sold protection is US\$50,112,907 (31 December 2025: US\$46,442,182) for Man Global Investment Grade Opportunities, US\$3,804,213 (31 December 2025: US\$1,601,188) for Man Dynamic Income, €6,664,779 (31 December 2025: €6,047,811) for Man Euro Corporate Bond and US\$49,369,618 (31 December 2025: US\$Nil) for Man Global Credit Value.

The fair value of these contracts as at 30 June 2026 was of (US\$916,564) (31 December 2025: (US\$800,715)) for Man Global Investment Grade Opportunities, (US\$104,986) (31 December 2025: US\$5,684) for Man Dynamic Income, (€118,086) (31 December 2025: (€103,422)) for Man Euro Corporate Bond and US\$4,560,005 (31 December 2025: US\$Nil) for Man Global Credit Value.

The Fund may purchase or write put and call options through OTC markets. Options purchased by the Fund provide the Fund with the opportunity to purchase (call options) or sell (put options) the underlying asset at an agreed-upon value either on or before the expiration of the option. Options written by the Fund provide the purchaser of the option the opportunity to purchase from or sell to the Fund the underlying asset at an agreed-upon value either on or before the expiration of the option. Premiums received from writing options are marked-to-market in accordance with note 2 and the resulting gains or losses are recorded in the statement of comprehensive income. The Fund may also invest in swaptions which are a combination of features of an option and an interest rate swap. The maximum loss to a buyer of an option is the loss of the premium. The writer of a call option has to bear the risk of an unfavourable change in the value underlying the option and, unless an offsetting long position is owned, the theoretical loss is unlimited.

Derivative financial instruments are generally based on notional amounts which are not recorded in the financial statements. These notional amounts represent the theoretical principal value on which the cash flows of the derivative transactions are based. Unrealised gains or losses, rather than notional amounts, or the exchange-traded derivatives traded by the Fund are included in the statement of financial position. The net unrealised gains or losses, rather than contract or notional amounts, represent the Fund's approximate future cash flows from trading activities.

Total	(663,022)	659,453	3,569	-

Man Systematic European Equity

The following table summarises the net financial assets per counterparty as at 30 June 2026:

Offsetting of derivative assets and collateral held by counterparty

	(i)	(ii)		(iii)=(i)+(ii)
		Gross assets not offset in the unaudited statement of financial position		
Counterparty	Gross amounts of assets in the unaudited statement of financial position €	Financial instruments €	Cash collateral held* €	Net amount €
Bank of New York Mellon	1,536	-	-	1,536
Goldman Sachs International	22,204	-	-	22,204
Total	23,740	-	-	23,740

As at 30 June 2026, there were no financial liabilities subject to offsetting.

Man Systematic US Equity

The following table summarises the net financial assets per counterparty as at 30 June 2026:

Offsetting of derivative assets and collateral held by counterparty

	(i)	(ii)		(iii)=(i)+(ii)
		Gross assets not offset in the unaudited statement of financial position		
Counterparty	Gross amounts of assets in the unaudited statement of financial position US\$	Financial instruments US\$	Cash collateral held* US\$	Net amount US\$
Goldman Sachs International	3,960	-	-	3,960
Total	3,960	-	-	3,960

As at 30 June 2026, there were no financial liabilities subject to offsetting.

Man Systematic European Equity and Man Systematic US Equity commenced their operations on 15 May 2026 and 21 May 2026, respectively, hence comparatives for the year ended 31 December 2025 are not presented.

* Excess of collateral held by a counterparty is not shown for financial reporting purposes.

** Excess of collateral pledged by a counterparty is not shown for financial reporting purposes.

6. Financial risk management

Overall risk management

The risks of the Fund and of each Portfolio are consistent with those set out in the audited financial statements for the year ended 31 December 2025 and those detailed within the Prospectus.

#Man Emerging Markets Corporate Credit Opportunities and Man Global Resources Equity commenced their operations on 6 February 2025 and 15 April 2025, respectively.

Man Funds plc

Condensed notes to the unaudited financial statements (continued)
For the six month period ended 30 June 2026

8. Related party transactions

Neither the Directors, nor their families, nor the secretary (Matsack Trust Limited), nor the Investment Managers had any interests in the Shares of the Fund during the period ended 30 June 2026, with the exception of 29,998 Subscriber Shares held by Man Asset Management (Ireland) Limited.

During the period, Samantha McConnell, Ronan Daly and Bronwyn Wright earned Directors' fees of €35,000 each. John Morton has elected to waive his Directors' fee as he is the CEO and a director of Man Asset Management (Ireland) Limited, the Manager of the Fund.

Each of the Directors is or may become involved in other financial investment and professional activities which may cause conflicts of interest with the management of the Fund. These activities include management or administration of other companies (including those with investment objectives similar to those of the Fund or structures that may be related to Man Group plc sponsored investment funds), serving as directors, advisers and/or agents of other companies, including companies and legal structures in which the Fund may invest and/or which may invest into the Fund.

GLG Partners LP, GLG LLC and Numeric Investors LLC - the Investment Managers of the Portfolios, Man Asset Management (Ireland) Limited - the Manager of the Fund and Man Investments AG - the Distributor in relation to the Portfolios of the Fund are indirect wholly-owned subsidiaries of Man Group plc and all subsidiaries of Man Group plc are related parties.

The following transactions took place between the Fund and its related parties:

For the period ended 30 June 2026

Related party	Types of fees /income	Total fees /(income) US\$	Fees payable /(receivable) at 30 June 2026 US\$
Man Asset Management (Ireland) Limited	Management fees	88,327,096	16,646,100
Man Asset Management (Ireland) Limited	Performance fees	9,933,183	11,214,805
Man Asset Management (Ireland) Limited	Administration fees*	38,146,843	22,411,219
Man Asset Management (Ireland) Limited	Expense reimbursement	(18,025,468)	(9,792,399)
Directors	Directors' fees	59,730	-

For the period ended 30 June 2025

Related party	Types of fees /income	Total fees /(income) US\$	Fees payable /(receivable) 31 December 2025 US\$
Man Asset Management (Ireland) Limited	Management fees	35,556,752	12,114,241
Man Asset Management (Ireland) Limited	Performance fees	1,222,035	2,490,857
Man Asset Management (Ireland) Limited	Administration fees*	16,380,237	17,079,103
Man Asset Management (Ireland) Limited	Expense reimbursement	(7,688,192)	(7,429,262)
Directors	Directors' fees	51,673	-

* The amount paid to each Administrator and Investment Manager is determined between the parties from time to time, but, for the avoidance of doubt, the Investment Manager receives only the portion of the administration fee relating to the administrative support services it provides pursuant to the Administrative Services Agreement. Part of the administration fee will be paid by the Fund to the Manager (for on-payment to the Administrator) monthly in arrears and the remainder will be paid by the Fund to the Investment Manager.

Administration fees and expense reimbursement are included in accrued expenses and other liabilities and other assets, respectively in the statement of financial position.

The above amounts are payable on demand and do not bear interest. Furthermore, the above transactions were made on terms equivalent to those that prevail in arm's length transactions.

11. Soft commissions

In line with the introduction of revised rules in respect of the use of dealing commission as part of the implementation of the Directive 2014/65/EU on Markets in Financial Instruments and amending Directive 2004/39/EC ("MiFID II"), effective from 3 January 2018, the Investment Manager no longer pays for its investment research via dealing commission. The Investment Manager has established a research budget and the Portfolios have accrued a fee to pay for the research services independent of trade execution. The Investment Manager will share the research costs with the Portfolios based on an allocated usage basis. All transactions are placed and executed on the basis that best execution is achieved.

The Fund incurred transaction costs including equity swaps commissions which are included in the net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the unaudited statement of comprehensive income.

12. Transaction costs

For the period ended 30 June 2026 and 30 June 2025, the Fund incurred transaction costs, which are included in the unaudited statement of comprehensive income as part of net gain/(loss) on financial assets and liabilities at fair value through profit or loss, as follows:

	30 June 2026	30 June 2025
Man Global Convertibles	US\$89	US\$317

*Man Pan-European Equity Growth ceased its operations on 21 April 2026.

**Man RI Global Sustainable Future ceased its operations on 24 March 2025.

#Man Global Resources Equity, Man Systematic Global Core Equities, Man Global Credit Value, Man Systematic European Equity and Man Systematic US Equity commenced their operations on 15 April 2025, 15 August 2025, 14 October 2025, 15 May 2026 and 21 May 2026, respectively.

Man Funds plc

Condensed notes to the unaudited financial statements (continued)
For the six month period ended 30 June 2026

13. Securities Financing Transactions Regulation

The Securities Financing Transactions Regulation, as published by the European Securities and Markets Authority, aims to improve the transparency of the security financing markets. Disclosures regarding exposures to Securities Financing Transactions ("SFTs") will be required on all reports and accounts published.

As at 30 June 2026, certain Portfolios engaged in securities financing transactions, refer to the reporting requirement in respect of the Securities Financing Transactions Regulation section for details.

14. Significant events during the period

Prospectus

A new Supplement for the Man GLG Portfolios was issued on 5 January 2026 to the Prospectus dated 11 November 2024. The amendments reflected the creation of a new share class category with respect to Man Emerging Markets Corporate Credit Opportunities.

A new Supplement for the Man Numeric Portfolios was issued on 6 January 2026 to the Prospectus dated 11 November 2024. The amendments reflected the creation of a new share class category with respect to Man Systematic Emerging Markets Equity.

A new Addendum was issued on 20 January 2026 to the Prospectus dated 11 November 2024. The amendments reflected the creation of new share class categories.

A new Supplement for the Man GLG Portfolios was issued on 23 January 2026 to the Prospectus dated 11 November 2024. The amendments reflected the creation of a new share class category with respect to Man Systematic Man Dynamic Income.

A new Supplement for the Man Numeric Portfolios was issued on 5 February 2026 to the Prospectus dated 11 November 2024. The amendments reflected the creation of a new share class category with respect to Man Systematic Emerging Markets Equity.

A new Supplement for the Man Numeric Portfolios was issued on 20 February 2026 to the Prospectus dated 11 November 2024. The amendments reflected the approval of two new sub-funds, Man Systematic European Equity and Man Systematic US Equity.

A new Addendum was issued on 10 March 2026 to the Man Numeric Portfolios Supplement dated 20 February 2026 and the Prospectus dated 11 November 2024. The amendments reflected the creation of a new share class category with respect to Man Systematic European Equity.

A new Supplement for the Man Numeric Portfolios was issued on 12 March 2026 to the Prospectus dated 11 November 2024. The amendments reflected the creation of new share class categories with respect to Man Systematic Global Core Equities.

A new Supplement for the Man GLG Portfolios was issued on 16 March 2026 to the Prospectus dated 11 November 2024. The amendments reflected the creation of new share class categories with respect to Man Dynamic Income.

A new Supplement for the Man GLG Portfolios was issued on 25 March 2026 to the Prospectus dated 11 November 2024. The amendments reflected the creation of a new share class category with respect to Man Global Credit Value.

A new Supplement for the Man GLG Portfolios was issued on 27 March 2026 to the Prospectus dated 11 November 2024. The amendments reflected an update to move both the valuation point and the dealing cut-off point to 11:00am (GMT) with respect to Man Japan CoreAlpha Equity, Man Asia (Ex Japan) Equity and Man China Equity.

Effective 16 April 2026, an updated Prospectus together with a new Supplement for each of the MAN GLG Portfolios, GLG LLC Portfolios and MAN Numeric Portfolios were issued. The updates have been made in order to ensure compliance with the liquidity management tools requirements of Directive (EU) 2024/927 ("UCITS VI") and the accompanying Level 2 regulation. A number of general updates have also been made.

A new Supplement for the Man GLG Portfolios was issued on 5 May 2026 to the Prospectus dated 16 April 2026. The amendments made were to convert the "DU" share class to the "DVU" share class in the Man Dynamic Income sub-fund and to correct the initial sales commission for the "DWU" share class in the Man Emerging Markets Corporate Credit Opportunities sub-fund.

A new Supplement for the Man GLG Portfolios was issued on 6 May 2026 to the Prospectus dated 16 April 2026. The amendments reflected the creation of a new "DWYBU" share class category in respect of Man Dynamic Income.

A new Supplement for the Man GLG Portfolios was issued on 30 June 2026 to the Prospectus dated 16 April 2026. The amendments reflected the creation of a new share class category with respect to Man Global Emerging Markets Local Currency Rates, Man Global Emerging Markets Bond and Man Global Resource Equity.

The Directors, Investment Managers and the Manager acknowledge the current crisis in Ukraine and all applicable Russian related sanctions. The Investment Managers reviewed the positions held across Man Funds VI plc for any Russian and Ukrainian exposure. Appropriate action has been taken to reduce or remove certain direct exposures to Russia, where necessary, and the situation is under ongoing review.

The Directors and the Manager acknowledge the current conflict across the Middle East. As of the date of issuance of these financial statements, the conflict remains ongoing and is being actively monitored.

Furthermore, there were no other significant events during the period ended 30 June 2026.

15. Subsequent events since the period end

A new Supplement for the Man GLG Portfolios was issued on 8 July 2026 to the Prospectus dated 16 April 2026. The updates made were to add an initial sales commission of up to 5% for the "DV" share class to Man Global Resources Equity.

A new Supplement for Man GLG Portfolios was issued on 7 August 2026 to the Prospectus dated 16 April 2026. The amendments reflected the creation of new share class category with respect to Man Global Resources Equity.

A new Supplement for Man Numeric Portfolios was issued on 7 August 2026 to the Prospectus dated 16 April 2026. The amendments reflected the creation of new share class category with respect to Man Systematic Global Core Equities.

On 13 August 2026, the Central Bank noted an addendum to the Prospectus and the supplement in respect of the Numeric Portfolios which discloses that the investment manager, Numeric Investors LLC, may engage in the use of commissions and "soft dollars" in respect of Man Systematic Emerging Markets Equity, Man Systematic Europe, Man Systematic China A Equity, Man Systematic US High Yield, Man Systematic Global Core Equities, Man Systematic European Equity and Man Systematic US Equity. The Prospectus was updated to amend the contact details in the 'Local Intermediaries' section for investors seeking information on the facilities available in the respective EU Member States in which the Funds are registered for marketing.

Man Funds plc

Condensed notes to the unaudited financial statements (continued)
For the six month period ended 30 June 2026

15. Subsequent events since the period end (continued)

Subsequent to the reporting period, Man Convertibles Global, a sub-fund of Man Umbrella SICAV, a Luxembourg investment capital with limited company, will merge into Man Global Convertibles with an effective date of 30 September 2026. Under the terms of the merger, shareholders of Man Convertibles Global will automatically receive shares in the corresponding share class of Man Global Convertibles based on an exchange ratio calculated using the respective net asset values as of 29 September 2026. No shareholder vote is required and no fees will be charged to shareholders as a result of the merger. All legal, advisory and administrative costs associated with the merger will be borne by GLG Partners LP while transactional costs attributable to shareholders will be capped at approximately 0.02% of the net asset value of Man Convertibles Global.

There have been no other subsequent events since the period end that impact the Fund and require disclosure in the unaudited financial statements.

16. Stock lending

The Fund may enter into stock lending programmes organised by generally recognised International Central Securities Depositories Systems provided that the programme is subject to a guarantee from the system operator.

No sub-fund is engaged in securities lending.

17. Dividends

On 30 June 2026 and 31 December 2025, the Directors proposed the payment of dividends as per the table below:

Common Reporting Standard - Data Protection Information Notice

The Fund hereby provides the following data protection information notice to all Shareholders in the Fund either as of 31 December 2015 or at any point of time since this date.

For the avoidance of doubt, this notice applies equally to any Shareholders that have ceased to hold Shares in the Fund since 1 January 2016. Furthermore, it should be noted that this notice is applicable to Controlling Persons of certain Shareholders. The Fund hereby confirm that they intend to take such steps as may be required to satisfy any obligations imposed by (i) the OECD's Standards for Automatic Exchange of Financial Account Information in Tax Matters ("the Standard"), which therein contains Common Reporting Standards ("CRS"), as applied in Ireland by mean of the relevant international legal framework and Irish tax legislation and (ii) EU Council Directive 2014/107/EU, amending Directive 2011/16/EU as regards mandatory automatic exchange information in the field of taxation ("DAC2"), as applied in Ireland by the means of the relevant tax legislation, so as to ensure compliance or deemed compliance (as the case may be) with the Standard/CRS and the DAC2 from 1 January 2016. In this regard, the Investment Manager on behalf of the Fund is obliged under Section 891F and Section 891G of the Irish Taxes Consolidation Act, 1997 (as amended) and regulations made pursuant to those sections to collect certain information about each Shareholder's tax arrangements (and also collect information in relation to relevant Controlling Persons of Specific Shareholders).

In certain circumstances, the Investment Manager on behalf of the Fund may be legally obliged to share this information and other financial information with respect to a Shareholder's interests in the Fund with the Irish Revenue Commissioners (and, in particular situations, also share information in relation to relevant Controlling Persons of specific Shareholders). In turn, and to the extent the account has been identified as a Reportable Account, the Irish Revenue Commissioners will exchange this information with the country of residence of the Reportable Person(s) in respect of the Reportable Account.

In particular, information that may be reported in respect of a Shareholder (and relevant Controlling Persons, if applicable) includes name, address, date of birth, place of birth, account number, account balance or value at period end (or, if the account was closed during such period, the balance or value at the date of the closure of the account), any payments (including redemption and dividend/interest payments) made with respect to the account during the calendar year, tax residency(ies) and tax identification number(s).

Man Funds plc

Supplementary information (Unaudited)

For the six month period ended 30 June 2026

Report of Directors' Remuneration (Unaudited)

The Directors of the Fund who are also employees of Man Group plc and companies within its group structure ("Man Group") do not receive any remuneration in respect of their services as directors of the Fund. The other directors receive fixed remuneration in respect of their services which is set at a level determined by the Board of Directors as a whole and which is not performance related. This is detailed in note 8 of these unaudited financial statements. None of the Directors are currently in receipt of variable remuneration in respect of their services as directors of the Fund and none of the Directors are currently in receipt of a pension from the Fund. The Fund has appointed Man Asset Management (Ireland) Limited as its UCITS management company. As such, the provisions of Article 14b of Directive 2009/65/EC in relation to remuneration are not applicable to the Fund. However, they do apply to Man Asset Management (Ireland) Limited, which has adopted a remuneration policy to ensure compliance.

Man Funds plc

Unaudited reporting requirement in respect of the Securities Financing Transactions Regulation For the six month period ended 30 June 2026

The Investment Managers may, on behalf of each sub-fund and subject to the conditions and within the limits laid down by the Financial Conduct Authority and the Prospectus, employ techniques and instruments relating to transferable securities, including investments in OTC Financial Derivative Instruments ("FDI") provided that such techniques and instruments are used for efficient portfolio management purposes or to provide protection against exchange risk or for direct investment purposes, where applicable.

The Fund did not engage in securities lending activity during the period, however it invested in equity swaps and total return swaps.

Securities Lending

As at 30 June 2026, no sub-fund is engaged in securities lending.

Portfolio Swaps

OTC derivative transactions are entered into by the Fund under an International Swaps and Derivatives Associations, Inc. Master Agreement ("ISDA Master Agreement") or similar agreement. An ISDA Master Agreement is a bilateral agreement between the Fund and a counterparty that governs OTC derivative transactions (including total return swaps and portfolio swaps) entered into by the parties. All OTC derivative transactions entered under an ISDA Master agreement are netted together for collateral purposes therefore any collateral disclosures provided below/elsewhere in the report are in respect of all OTC derivative transactions entered into by the Fund under the ISDA Master agreement, not just portfolio swaps.

The collateral figures provided on the next page relate to collateral held to support specific SFTRs, other cash held at brokers to support SFTRs, and other derivative transactions held at brokers where SFTRs are transacted.

The following table details the value of portfolio swaps as a proportion of the Fund's NAV, as at 30 June 2026:

	Portfolio swaps % of Net Assets
Man Global Convertibles	0.19%
Man Systematic Emerging Markets Equity	(0.08%)
Man Asia (ex Japan) Equity	0.24%
Man Global Investment Grade Opportunities	0.09%
Man Dynamic Income	0.03%
Man Euro Corporate Bond	(0.22%)
Man Global Resources Equity	0.06%
Man Global Credit Value	0.06%

All returns and costs from securities borrowing from OTC transactions were accrued by the Fund and were not subject to any returns sharing arrangements with the Fund's Investment Managers or any other third parties.

The following table details the value of portfolio swaps, analysed by counterparty as at 30 June 2026:

Counterparty	Counterparty's country of establishment	Portfolio Swap Market value
