How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2025-09-17

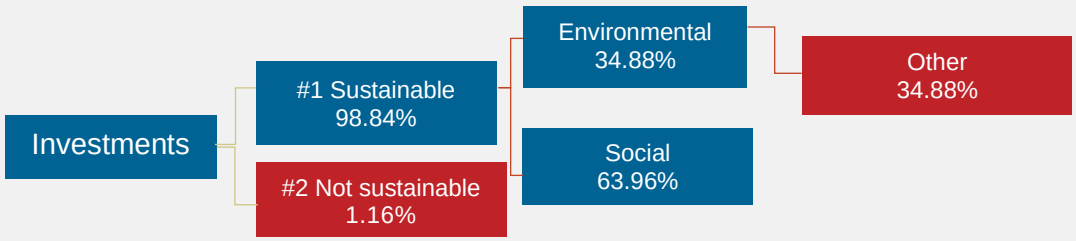
Largest Investments	Sector	% Assets	Country
INSTITUTIONAL LIQUIDITY FUND (USD) A ACCUMULATING	OPEN ENDED FUND	49.46 %	IRELAND
TENCENT HOLDINGS	INFORMATION TECHNOLOGY	4.88 %	CHINA

Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 98.84% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the sustainable investment objective, in accordance with the binding elements of the investment strategy of the financial product is 98.84%, which corresponds to the proportion of Fund invested in sustainable investments. This included 0.00% have an environmental objective (which is aligned with the EU Taxonomy) and 34.88% have an environmental objective (which is not aligned with the EU Taxonomy) and 63.96% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Not Sustainable", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Sustainable Covers sustainable investments with environmental or social objectives.

#2 Not sustainable Includes investments which do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Subsector	% Assets
OPEN ENDED FUND	CLOSED ENDED CASH FUND	49.46 %
FINANCIALS	COMMERCIAL BANKS	14.59 %
INFORMATION TECHNOLOGY	SEMICONDUCTOR EQUIPMENT & PRODUCTS	6.18 %
INFORMATION TECHNOLOGY	INTERNET SOFTWARE & SERVICES	4.88 %
HEALTHCARE	HEALTH CARE PROVIDERS & SERVICES	4.53 %

CONSUMER DISCRETIONARY	DIVERSIFIED CONSUMER SERVICES	0.58 %

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.00%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

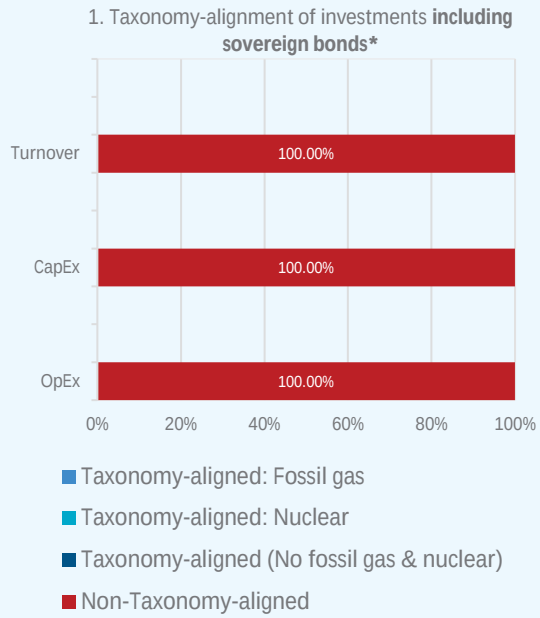
The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

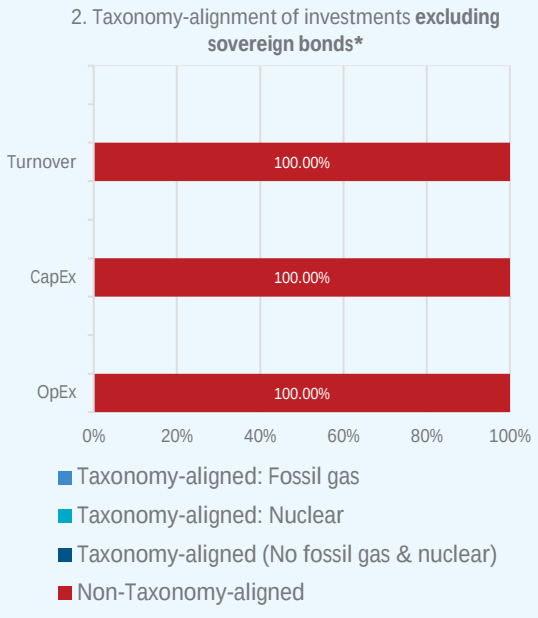
Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

levels corresponding to the best performance.



☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*

☒ *No*

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 100.00% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.00%	0.00%
Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.00%	0.00%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 34.88%.
Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 63.96%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "#2 not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the sustainable objective during the reference period?

The Fund took the following actions to meet the sustainable investment objective:

- The Fund made sustainable investments.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative ESG characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference sustainable benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social objectives that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- *How did the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with sustainable investment objective?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - SUSTAINABLE EUROZONE EQUITY FUND

Legal entity identifier: 549300BAPCX6D0E0Z219

Sustainable investment objective

Did this financial product have a sustainable investment objective?

☒ Yes	☐ No
☒ It made **sustainable investments with an environmental objective:** 61.72%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of __% of sustainable investments
☒ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☒ It made **sustainable investments with a social objective:** 37.69%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The Fund met the sustainable investment objective as defined in the SFDR precontractual disclosure for the period. The Fund aimed to achieve capital growth over the long term by investing in sustainable investments. The Fund determined sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives; provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The Investment Manager selected issuers based on the contribution of their economic activities to environmental or social objectives which are aligned with the SDGs.

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to

preserve the planet's oceans and forests. For further details see the UN website: https://sdgs.un.org/goals . Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure, assessed the ESG characteristics of at least 90% of the fund's assets and the fund's investment universe was reduced by at least 30% due to the exclusion of issuers on the basis of their ESG characteristics.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the sustainable objectives of the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the sustainable investment objective of the Fund:

i) the percentage of the Fund invested in sustainable investments: 99.41%

ii) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy: 4.02%

iii) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU taxonomy: 57.70%

iv) the percentage of the fund invested in sustainable investments with a social objective: 37.69%

v) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions (defined below): 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
% of Fund invested in sustainable investments	99.51%
% invested in sustainable investments with environmental objective qualifying under EU Taxonomy	3.48%
% of Fund invested in sustainable investments with environmental objective that do not qualify under the EU Taxonomy	53.33%
% invested in sustainable investments with a social objective	42.70%
% of Fund invested in securities with exposure to Exclusions	0.00%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

Largest Investments	Sector	% Assets	Country
ASML HOLDING	INFORMATION TECHNOLOGY	7.94 %	NETHERLANDS
SIEMENS	INDUSTRIALS	4.59 %	GERMANY

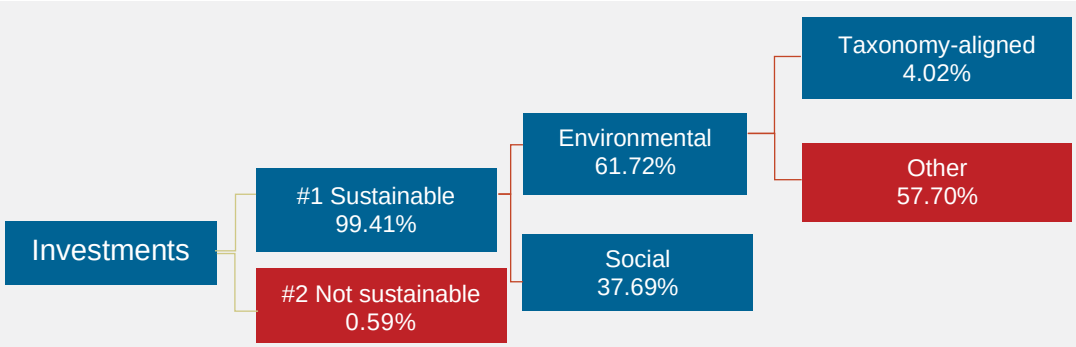
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 99.41% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the sustainable investment objective, in accordance with the binding elements of the investment strategy of the financial product is 99.41%, which corresponds to the proportion of Fund invested in sustainable investments. This included 4.02% have an environmental objective (which is aligned with the EU Taxonomy) and 57.70% have an environmental objective (which is not aligned with the EU Taxonomy) and 37.69% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Not Sustainable", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Sustainable Covers sustainable investments with environmental or social objectives.

#2 Not sustainable Includes investments which do not qualify as sustainable investments.

In which economic sectors were the investments made?

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 4.02%. This contributed to the following environmental objectives:

1) climate change mitigation: 2.84%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

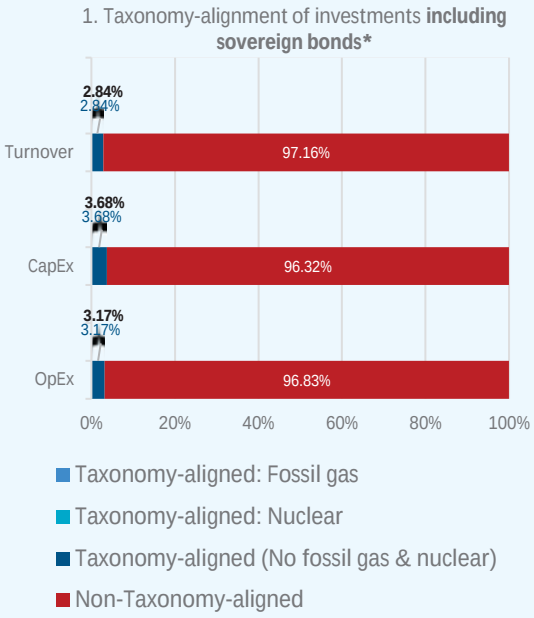
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

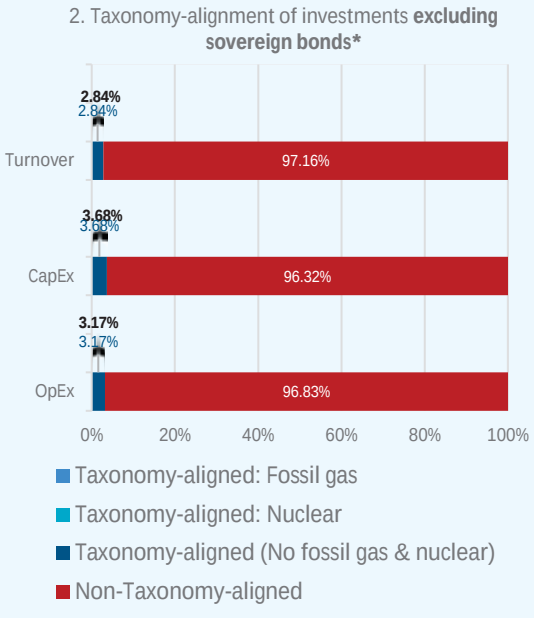
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
-**capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
-**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 100.00% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	2.84%	3.68%	3.17%
Non taxonomy-aligned	97.16%	96.32%	96.83%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	2.84%	3.68%	3.17%
Non taxonomy-aligned	97.16%	96.32%	96.83%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 1.48% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending

	2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	2.75%	2.75%
Taxonomy aligned investments capex	4.82%	4.82%
Taxonomy aligned investments opex	4.48%	4.48%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 57.70%.
Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 37.69%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "#2 not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the sustainable objective during the reference period?

The Fund took the following actions to meet the sustainable investment objective:

- The Fund made sustainable investments.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative ESG characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference sustainable benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social objectives that it promotes.

Reference benchmarks are indexes to measure whether the financial

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - SUSTAINABLE GLOBAL EQUITY FUND

Legal entity identifier: 254900R7XPBV37D85Z68

Sustainable investment objective

Did this financial product have a sustainable investment objective?

☒ **Yes**	☐ **No**
☒ It made **sustainable investments with an environmental objective:** 53.44%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of __% of sustainable investments
☒ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☒ It made **sustainable investments with a social objective:** 45.29%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The Fund met the sustainable investment objective as defined in the SFDR precontractual disclosure for the period. The Fund aimed to achieve capital growth over the long term by investing in sustainable investments. The Fund determined sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives; provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The Investment Manager selected issuers based on the contribution of their economic activities to environmental or social objectives which are aligned with the SDGs.

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website: https://sdgs.un.org/goals . Environmental focused SDGs include clean water and sanitation;

affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure, assessed the ESG characteristics of at least 90% of the fund's assets and the fund's investment universe was reduced by at least 20% due to the exclusion of issuers on the basis of their ESG characteristics.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the sustainable objectives of the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the sustainable investment objective of the Fund:

i) the percentage of the Fund invested in sustainable investments: 98.73%

ii) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU taxonomy: 51.76%

iii) the percentage of the fund invested in sustainable investments with a social objective: 45.29%

iv) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions (defined below): 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
% of Fund invested in sustainable investments	97.07%
% of Fund invested in sustainable investments with environmental objective that do not qualify under the EU Taxonomy	41.30%
% invested in sustainable investments with a social objective	53.86%
% of Fund invested in securities with exposure to Exclusions	0.00%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

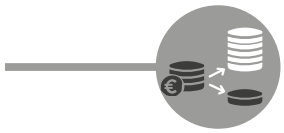
Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.



(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

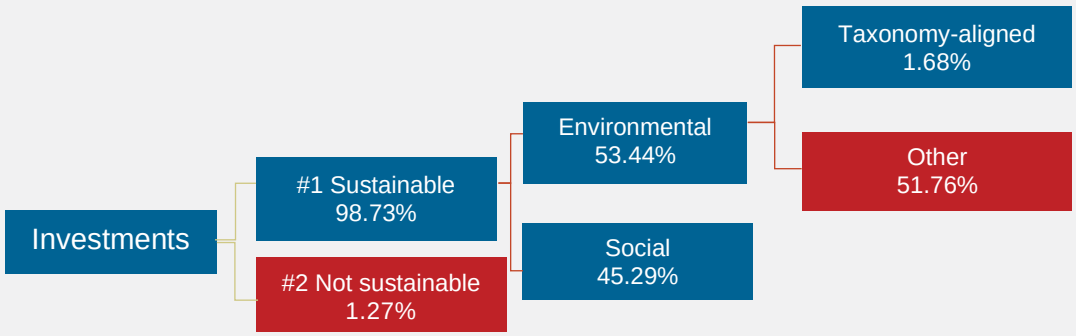
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 98.73% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the sustainable investment objective, in accordance with the binding elements of the investment strategy of the financial product is 98.73%, which corresponds to the proportion of Fund invested in sustainable investments. This included 1.68% have an environmental objective (which is aligned with the EU Taxonomy) and 51.76% have an environmental objective (which is not aligned with the EU Taxonomy) and 45.29% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under "#2 Not Sustainable", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Sustainable Covers sustainable investments with environmental or social objectives.

#2 Not sustainable Includes investments which do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.68%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

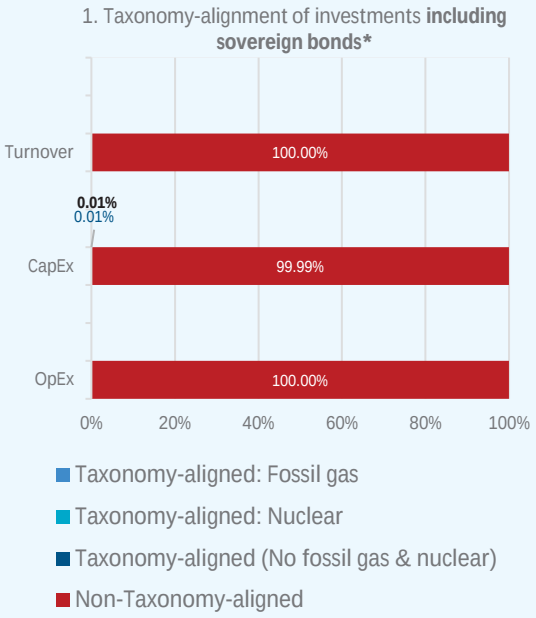
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

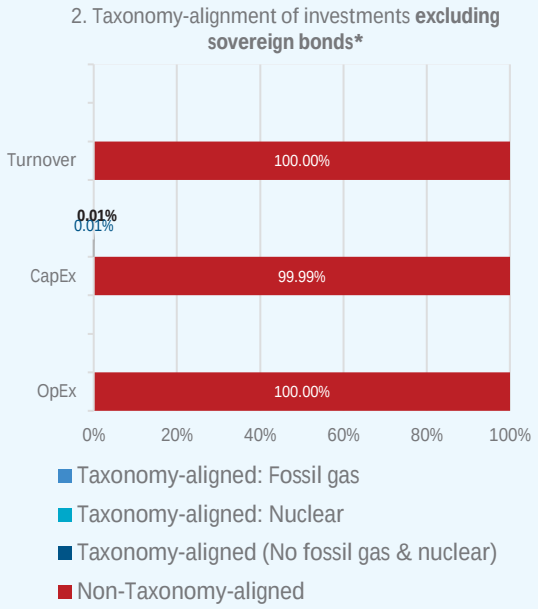
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
-**capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
-**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 99.65% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.01%	0.00%
Non taxonomy-aligned	100.00%	99.99%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.01%	0.00%
Non taxonomy-aligned	100.00%	99.99%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending

	2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.74%	0.74%
Taxonomy aligned investments capex	0.24%	0.24%
Taxonomy aligned investments opex	0.24%	0.24%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 51.76%.
Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 45.29%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "#2 not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the sustainable objective during the reference period?

The Fund took the following actions to meet the sustainable investment objective:

- The Fund made sustainable investments.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative ESG characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference sustainable benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social objectives that it promotes.

Reference benchmarks are indexes to measure whether the financial

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - SWITZERLAND FUND

Legal entity identifier: 5493001N8Q97TPZUYT12

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 67.42% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using an equal weighted method of calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 7.64 vs. 7.62

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 67.42%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 26.15%

v) the percentage of the Fund invested in sustainable investments with a social objective: 40.95%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	7.4 vs.7.23
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	68.29%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	29.81%
% invested in sustainable investments with a social objective	38.23%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 67.42% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

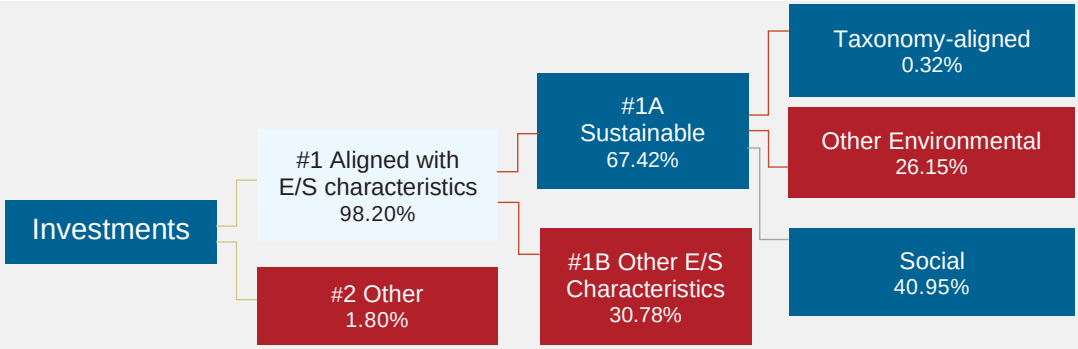
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 67.42% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.20%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 67.42% in sustainable investments of which 0.32% have an environmental objective (which is aligned with the EU Taxonomy) and 26.15% have an environmental objective (which is not aligned with the EU Taxonomy) and 40.95% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.32%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

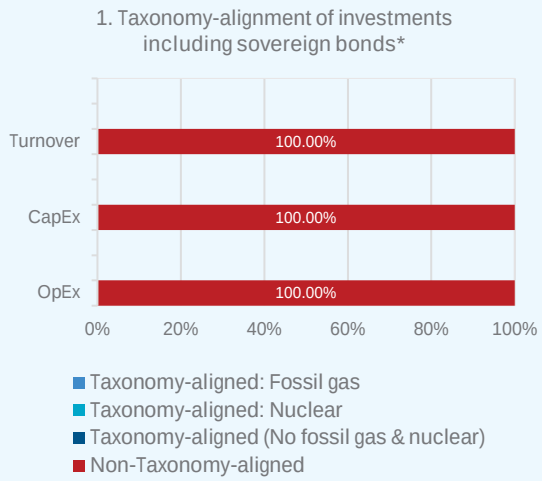
The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

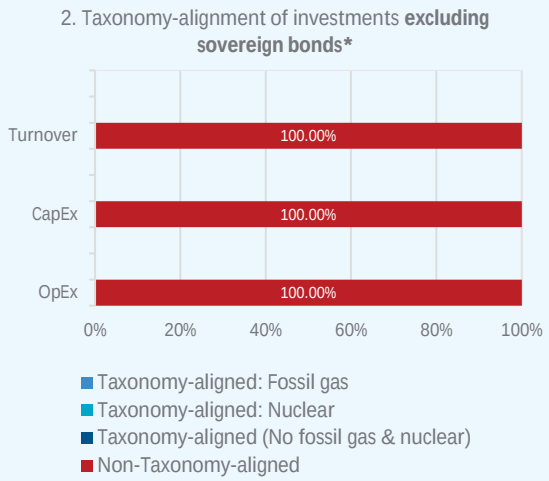
Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

Yes:

In fossil gas *In nuclear energy*



[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 100.00% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX

Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.13%	0.13%
Taxonomy aligned investments capex	0.18%	0.18%

Fidelity INTERNATIONAL

Taxonomy aligned investments opex	0.15%	0.15%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 26.15%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 40.95%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - TECHNOLOGY OPPORTUNITIES FUND

Legal entity identifier: 2549000BDP4X7X1C9A86

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 78.20% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 7.5 vs. 6.79

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 78.20%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 63.70%

v) the percentage of the Fund invested in sustainable investments with a social objective: 14.46%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	7.46 vs.7.0
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	76.74%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	60.87%
% invested in sustainable investments with a social objective	15.87%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 78.20% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

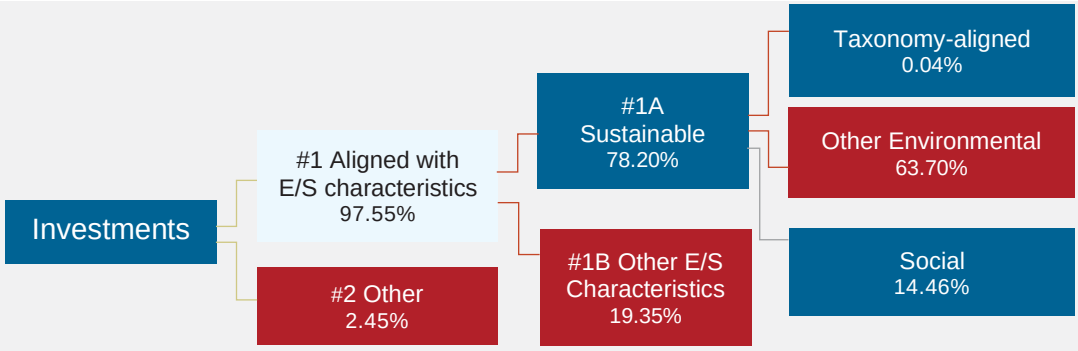
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 78.20% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 97.55%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 78.20% in sustainable investments of which 0.04% have an environmental objective (which is aligned with the EU Taxonomy) and 63.70% have an environmental objective (which is not aligned with the EU Taxonomy) and 14.46% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.04%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.02%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

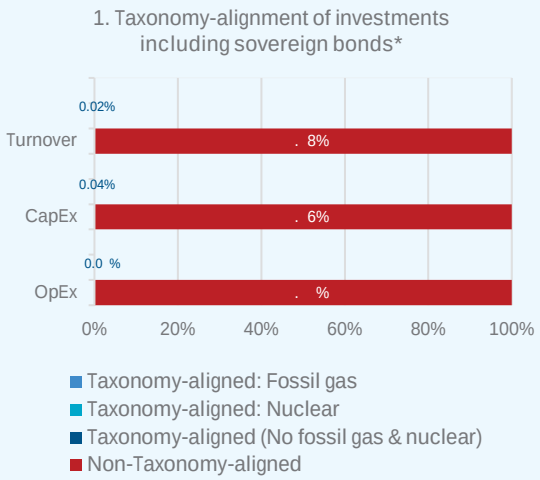
to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

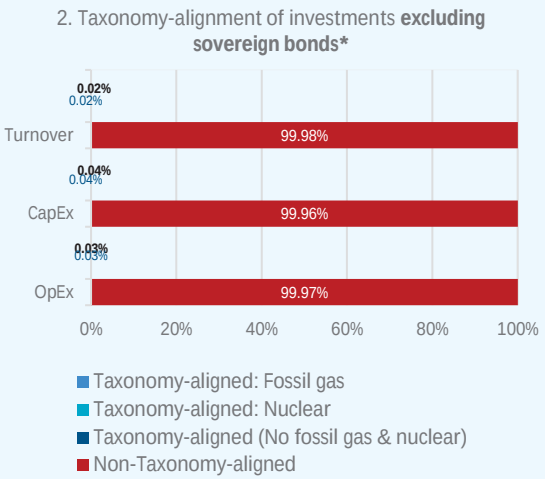
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

What was the share of investments in transitional and enabling activities?

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.02% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.00%	0.00%
Taxonomy aligned investments capex	0.01%	0.01%
Taxonomy aligned investments opex	0.03%	0.03%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 63.70%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 14.46%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - THAILAND FUND

Legal entity identifier: 549300KZ6XVPBRK5QV32

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 21.10% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 6.47 vs. 5.84

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 21.10%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 10.72%

v) the percentage of the Fund invested in sustainable investments with a social objective: 10.38%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	6.27 vs.5.98
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	17.63%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	3.62%
% invested in sustainable investments with a social objective	14.01%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 21.10% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

Largest Investments	Sector	% Assets	Country
PTT (F)	ENERGY	8.96 %	THAILAND
ADVANCED INFO SERV (F)	COMMUNICATION SERVICES	8.12 %	THAILAND

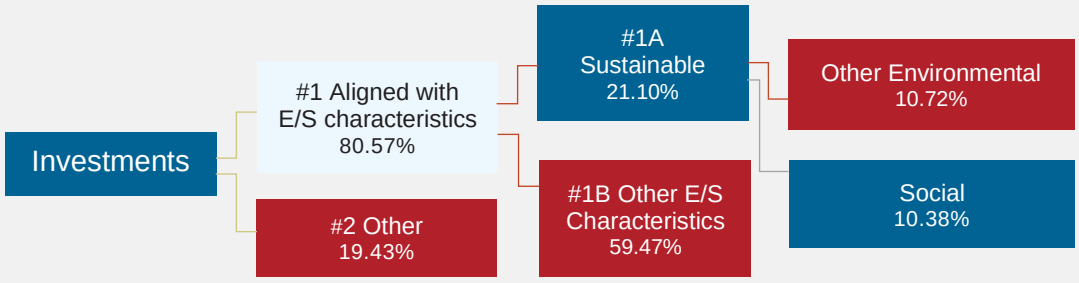
DELTA ELECTRONICS (F)	INFORMATION TECHNOLOGY	5.83 %	THAILAND
CENTRAL PATTANA (F)	REAL ESTATE	4.91 %	THAILAND
BANGKOK DUSIT MEDIC SVC (F)	HEALTHCARE	4.03 %	THAILAND
DELTA ELECTRONICS	INFORMATION TECHNOLOGY	3.63 %	TAIWAN
BUMRUNGRAD HOSPITAL (F)	HEALTHCARE	3.41 %	THAILAND
KASIKORNBANK (F)	FINANCIALS	3.41 %	THAILAND

Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 21.10% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 80.57%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 21.10% in sustainable investments of which 0.00% have an environmental objective (which is aligned with the EU Taxonomy) and 10.72% have an environmental objective (which is not aligned with the EU Taxonomy) and 10.38% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Subsector	% Assets

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.00%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

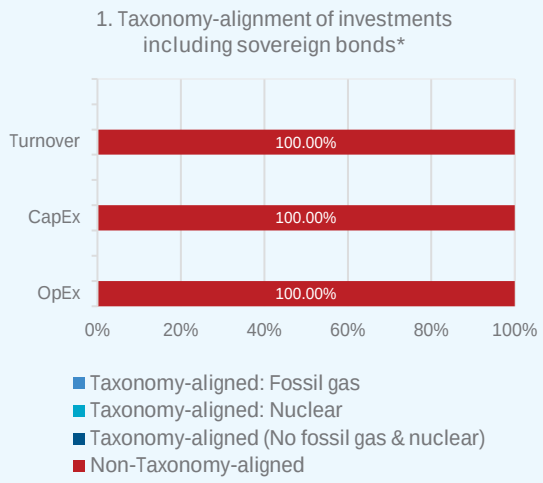
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

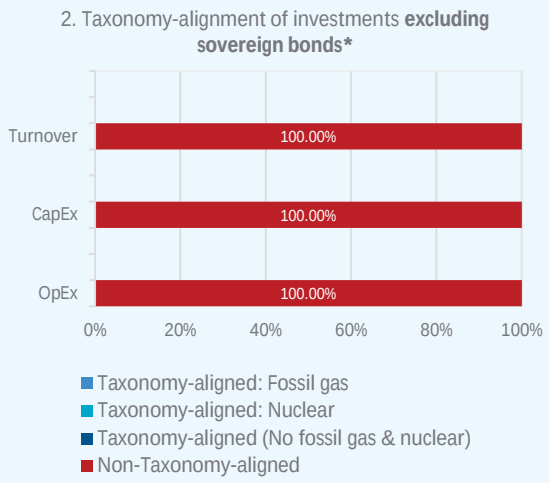
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

- ☐ *Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?*

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 100.00% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.00%	0.00%
Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.00%	0.00%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 10.72%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 10.38%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 75.90% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using an equal weighted method of calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 7.39 vs. 6.82

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 75.90%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 45.73%

v) the percentage of the Fund invested in sustainable investments with a social objective: 29.78%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	6.86 vs.6.73
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	51.98%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	19.50%
% invested in sustainable investments with a social objective	32.47%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 75.90% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

Largest Investments	Sector	% Assets	Country
NVIDIA	INFORMATION TECHNOLOGY	8.92 %	UNITED STATES
MICROSOFT	INFORMATION TECHNOLOGY	8.66 %	UNITED STATES

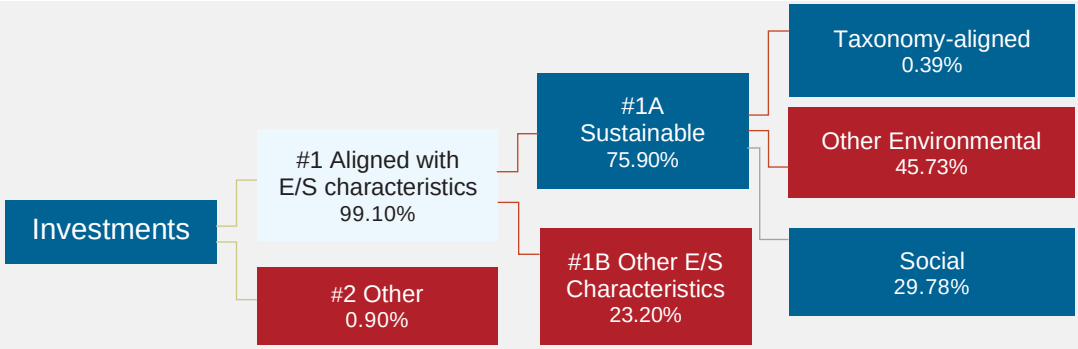
ARISTA NETWORKS	INFORMATION TECHNOLOGY	2.33 %	UNITED STATES

Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 75.90% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.10%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 75.90% in sustainable investments of which 0.39% have an environmental objective (which is aligned with the EU Taxonomy) and 45.73% have an environmental objective (which is not aligned with the EU Taxonomy) and 29.78% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.39%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

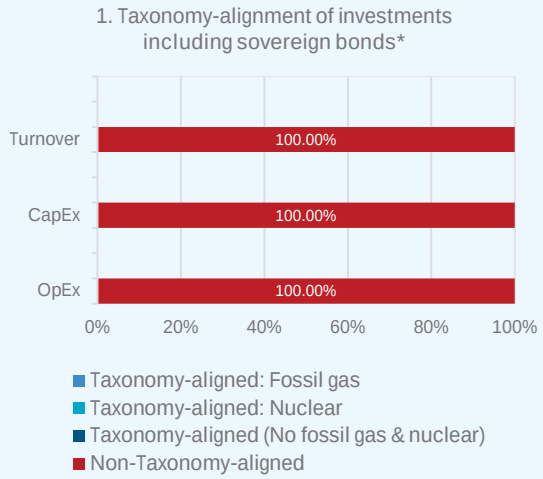
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

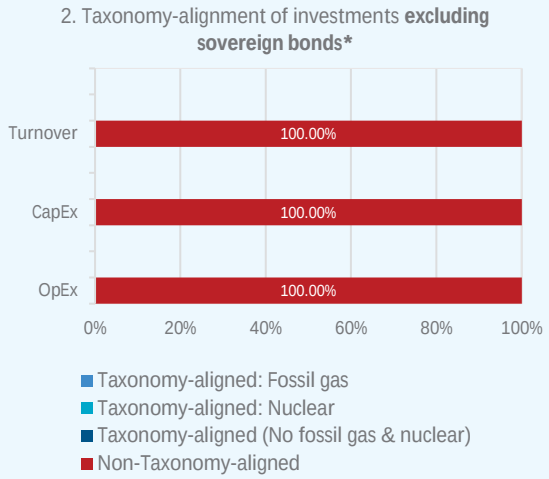
[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

levels corresponding to the best performance.

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 100.00% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds

Taxonomy aligned investments turnover	0.01%	0.01%
Taxonomy aligned investments capex	0.02%	0.02%
Taxonomy aligned investments opex	0.00%	0.00%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 45.73%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 29.78%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social

How does the reference benchmark differ from a broad market index?

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - WATER & WASTE FUND

Legal entity identifier: 254900IZ985QWMGJH651

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 77.74% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by investing in companies that are involved in the design, manufacture, or sale of products and services used in connection with the water and waste themes. The Fund partially intended to make sustainable investments.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure, assessed the ESG characteristics of at least 90% of the fund's assets and the fund's investment universe was reduced by at least 20% due to the exclusion of issuers on the basis of their ESG characteristics.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the percentage of the fund used to meet the environmental or social characteristics promoted by the Fund: 99.57%

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 77.74%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy: 6.74%

v) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 62.86%

vi) the percentage of the Fund invested in sustainable investments with a social objective: 8.14%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the Fund used to meet the environmental or social characteristics promoted by the Fund	96.75%
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	70.39%
% invested in sustainable investments with environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy	6.48%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	47.23%
% invested in sustainable investments with a social objective	16.68%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 77.74% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The

investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

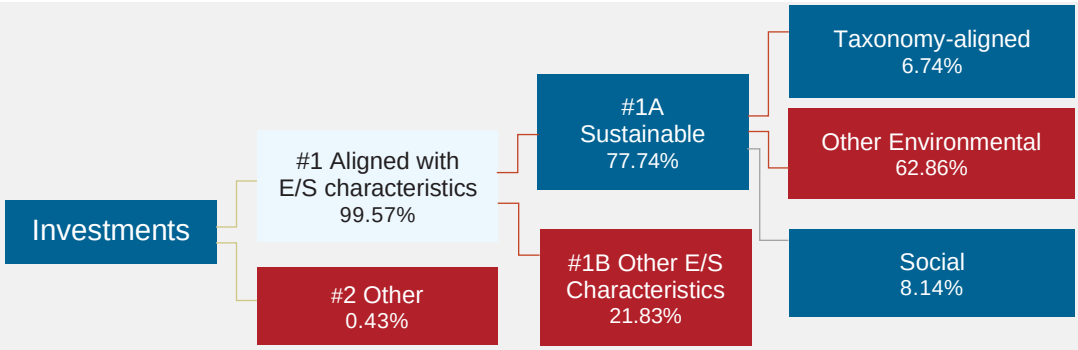
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 77.74% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.57%. This included 77.74% in sustainable investments of which 6.74% have an environmental objective (which is aligned with the EU Taxonomy) and 62.86% have an environmental objective (which is not aligned with the EU Taxonomy) and 8.14% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 6.74%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.02%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

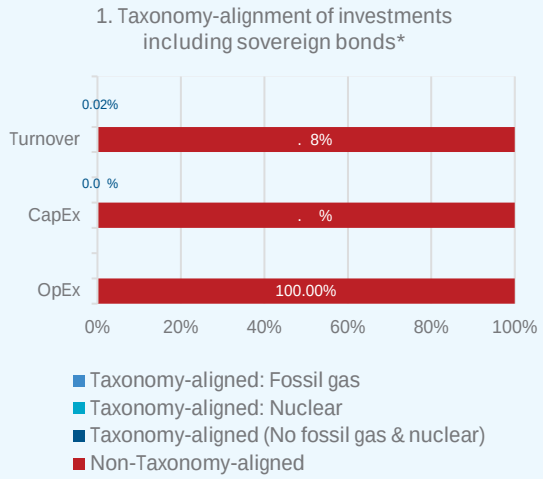
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

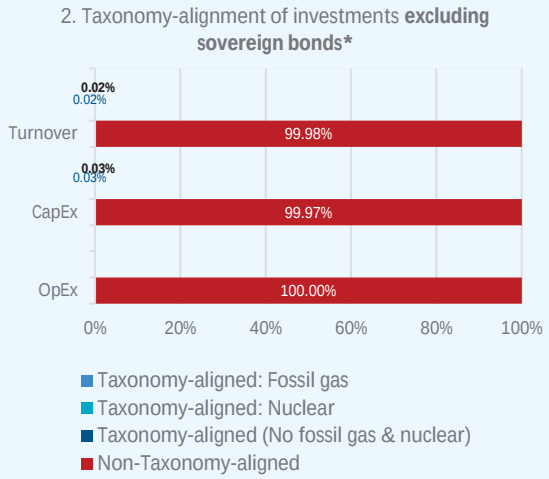
[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

levels corresponding to the best performance.

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 100.00% of the total investments.

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.02% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	3.73%	3.73%

Fidelity INTERNATIONAL

Taxonomy aligned investments capex	1.69%	1.69%
Taxonomy aligned investments opex	0.60%	0.60%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 62.86%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 8.14%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aligning to the fund's sustainability theme
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - WORLD FUND

Legal entity identifier: 5493001CZJOXQY9N2O82

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 70.14% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 7.5 vs. 7.07

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 70.14%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 43.22%

v) the percentage of the Fund invested in sustainable investments with a social objective: 25.76%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	7.45 vs.7.07
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	71.93%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	39.01%
% invested in sustainable investments with a social objective	31.88%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 70.14% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

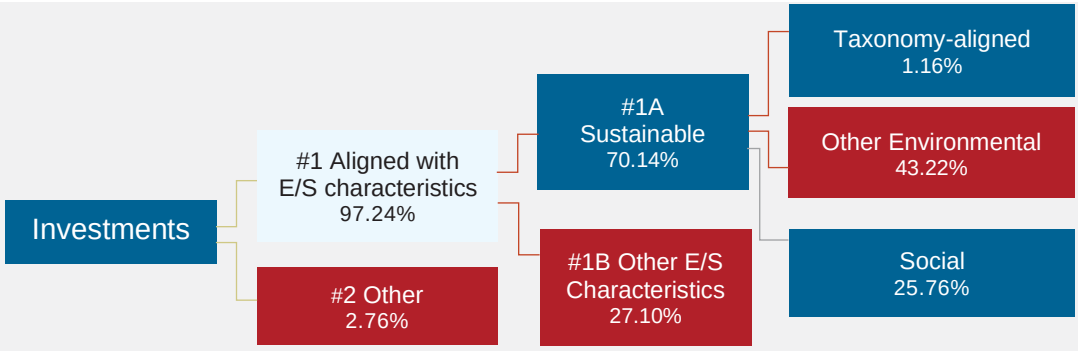
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 70.14% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 97.24%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 70.14% in sustainable investments of which 1.16% have an environmental objective (which is aligned with the EU Taxonomy) and 43.22% have an environmental objective (which is not aligned with the EU Taxonomy) and 25.76% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.16%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.13%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

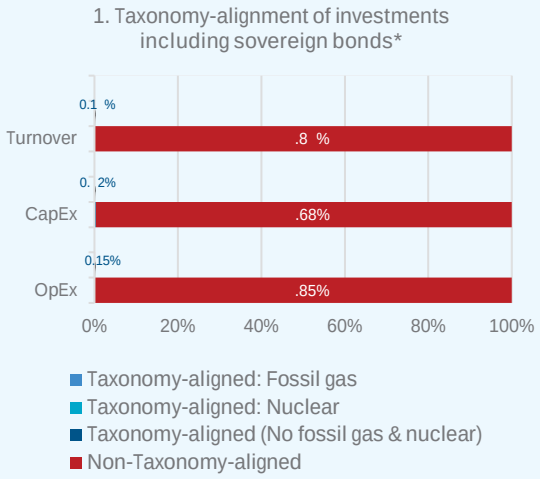
The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

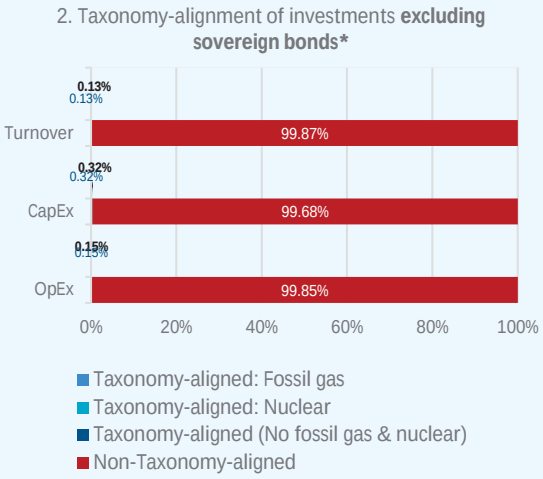
Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*

☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*



[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 100.00% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 7.36 vs. 7.11

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 37.96%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 20.73%

v) the percentage of the Fund invested in sustainable investments with a social objective: 17.03%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	7.26 vs.6.85
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	37.87%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	21.13%
% invested in sustainable investments with a social objective	16.64%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 37.96% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

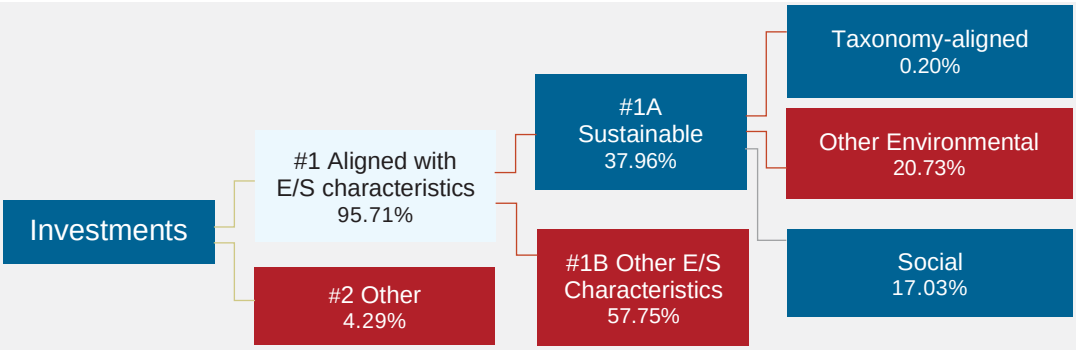
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 37.96% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 95.71%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 37.96% in sustainable investments of which 0.20% have an environmental objective (which is aligned with the EU Taxonomy) and 20.73% have an environmental objective (which is not aligned with the EU Taxonomy) and 17.03% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.20%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.01%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

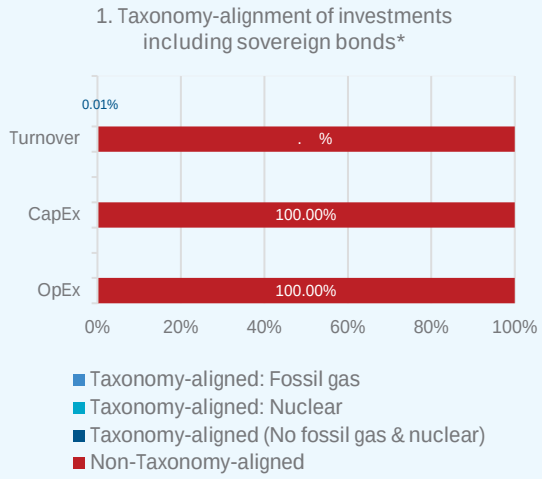
Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*

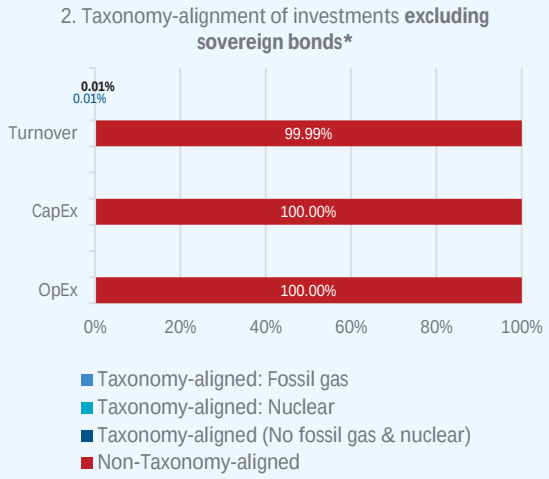
☐ *In fossil gas* ☐ *In nuclear energy*

☒ *No*

Taxonomy-aligned activities are expressed as a share of:



- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies,



The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

e.g. for a transition to a green economy.

-operational expenditure (OpEx) reflecting green operational activities of investee companies.

This graph represents 100.00% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.01%	0.00%	0.00%
Non taxonomy-aligned	99.99%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.01%	0.00%	0.00%
Non taxonomy-aligned	99.99%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.01% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.09%	0.09%
Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.00%	0.00%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 20.73%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 17.03%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - EUROPEAN DIVIDEND FUND

Legal entity identifier: 549300QYNIMMR1Q2GY78

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 83.83% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 7.95 vs. 7.38

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 83.83%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 44.73%

v) the percentage of the Fund invested in sustainable investments with a social objective: 36.57%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	7.9 vs.7.42
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	83.15%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	45.61%
% invested in sustainable investments with a social objective	34.97%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 83.83% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 2.53%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.17%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in

substantial contribution to an environmental objective.

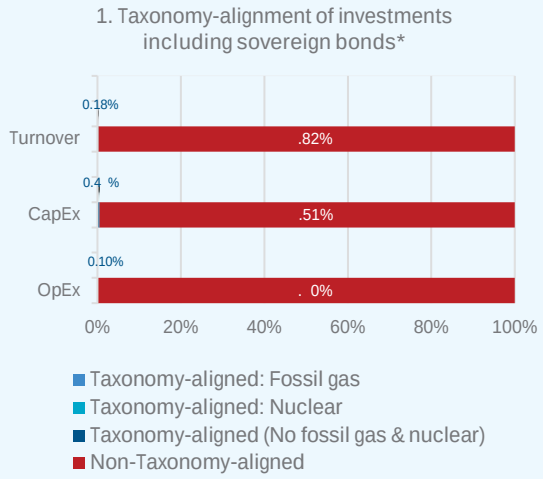
Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

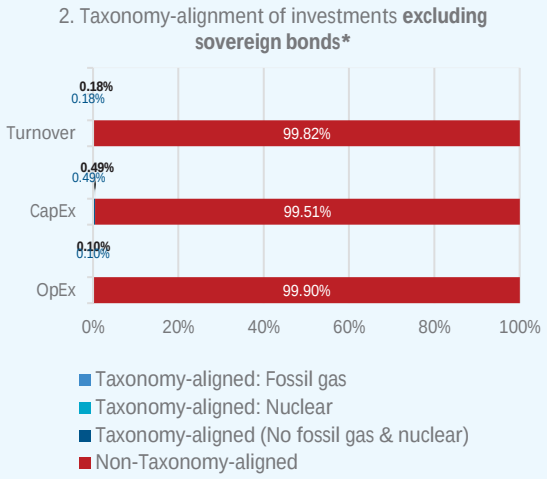
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 100.00% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.18%	0.49%	0.10%
Non taxonomy-aligned	99.82%	99.51%	99.90%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.18%	0.49%	0.10%
Non taxonomy-aligned	99.82%	99.51%	99.90%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.14% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	1.38%	1.38%
Taxonomy aligned investments capex	2.61%	2.61%
Taxonomy aligned investments opex	1.44%	1.44%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 44.73%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 36.57%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - EUROPEAN DIVIDEND PLUS FUND

Legal entity identifier: 254900G129G6M801BZ71

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 84.65% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund was closed during the reference period covered by this report. During the closing process, the sustainability-related commitments, as set out in the Fund's pre-contractual documentation, might not have been fully met.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social

How did the sustainability indicators perform?

characteristics promoted by the financial product are attained.

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

(i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 8.18 vs. 7.65

(ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

During the reference period, a temporary exposure to an exclusion occurred due to an inadvertent error. The position was subsequently divested.

(iii) the percentage of the Fund invested in sustainable investments: 84.65%

(iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 42.37%

(v) the percentage of the Fund invested in sustainable investments with a social objective: 41.08%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	8.04 vs.7.31
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	83.18%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	41.91%
% invested in sustainable investments with a social objective	38.82%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 84.65% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The

investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-03-05

Largest Investments	Sector	% Assets	Country

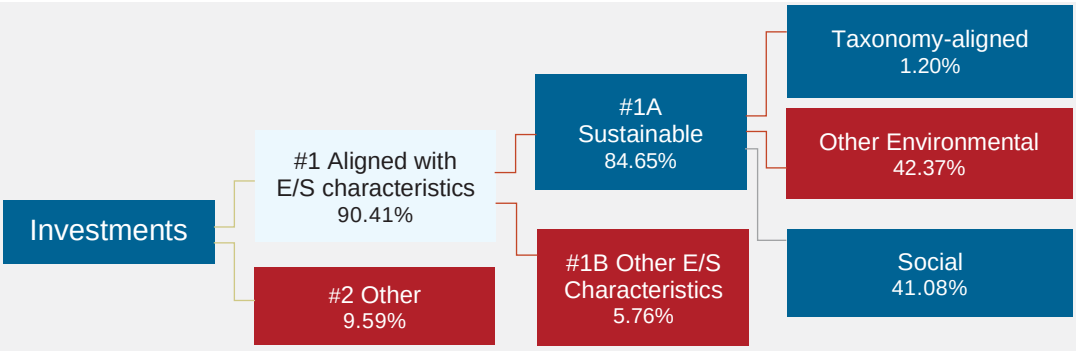
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 84.65% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 90.41%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 84.65% in sustainable investments of which 1.20% have an environmental objective (which is aligned with the EU Taxonomy) and 42.37% have an environmental objective (which is not aligned with the EU Taxonomy) and 41.08% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - GLOBAL DEFENSIVE EQUITY FUND

Legal entity identifier: 549300NJ0LHMXLO0MG36

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 78.63% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 8.23 vs. 7.04

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 78.63%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 48.53%

v) the percentage of the Fund invested in sustainable investments with a social objective: 27.83%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	8.16 vs.7.0
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	70.34%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	36.59%
% invested in sustainable investments with a social objective	31.64%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 78.63% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

Largest Investments	Sector	% Assets	Country

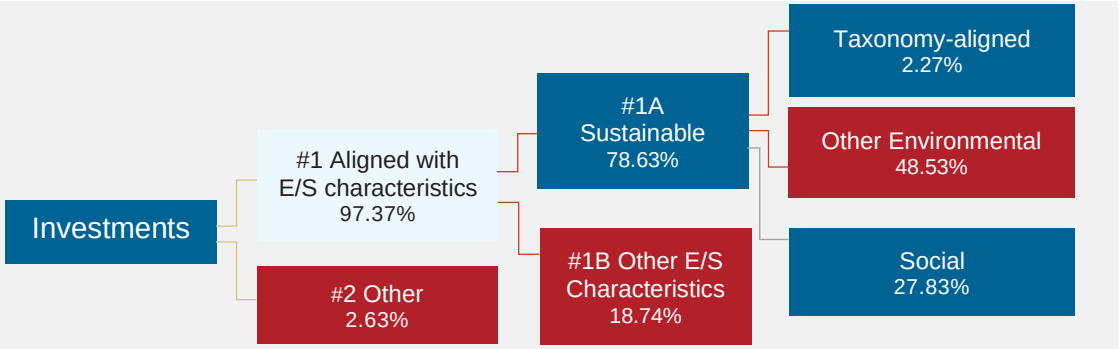
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 78.63% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 97.37%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 78.63% in sustainable investments of which 2.27% have an environmental objective (which is aligned with the EU Taxonomy) and 48.53% have an environmental objective (which is not aligned with the EU Taxonomy) and 27.83% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 2.27%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.22%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

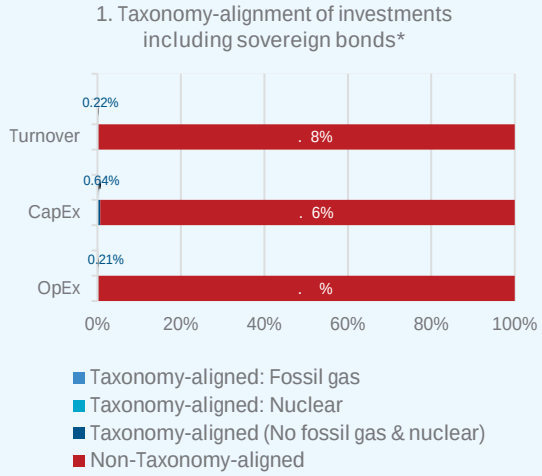
The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

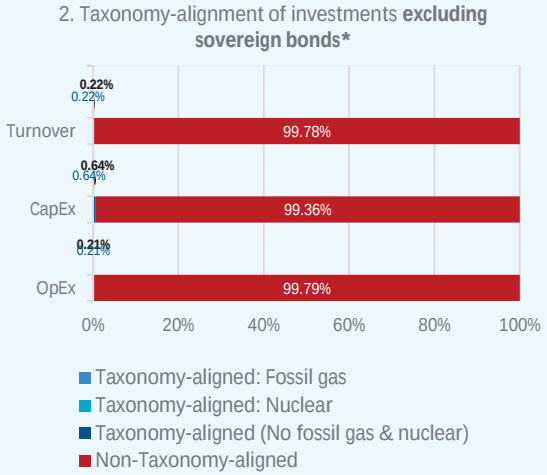
low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 100.00% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.22%	0.64%	0.21%
Non taxonomy-aligned	99.78%	99.36%	99.79%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.22%	0.64%	0.21%
Non taxonomy-aligned	99.78%	99.36%	99.79%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.16% for enabling activities, measured by Turnover.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	1.07%	1.07%
Taxonomy aligned investments capex	2.49%	2.49%
Taxonomy aligned investments opex	1.47%	1.47%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 48.53%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 27.83%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - GLOBAL DIVIDEND FUND

Legal entity identifier: 549300TOZX7F2KZWXK25

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 78.08% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 7.93 vs. 7.04

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 78.08%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 48.41%

v) the percentage of the Fund invested in sustainable investments with a social objective: 25.44%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	7.78 vs.7.0
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	82.21%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	47.25%
% invested in sustainable investments with a social objective	31.12%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 78.08% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

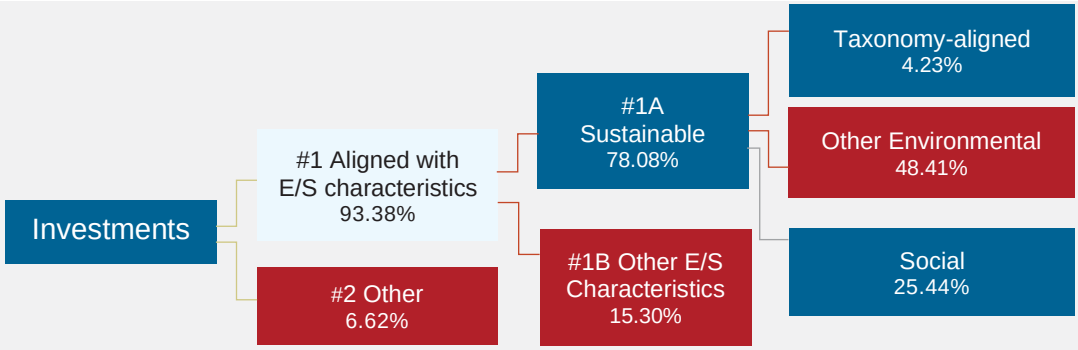
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 78.08% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 93.38%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 78.08% in sustainable investments of which 4.23% have an environmental objective (which is aligned with the EU Taxonomy) and 48.41% have an environmental objective (which is not aligned with the EU Taxonomy) and 25.44% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 4.23%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.15%

2) climate change adaptation: 0.00%

of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

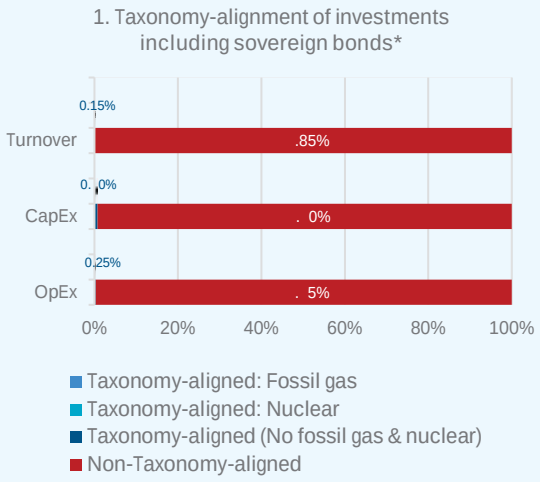
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

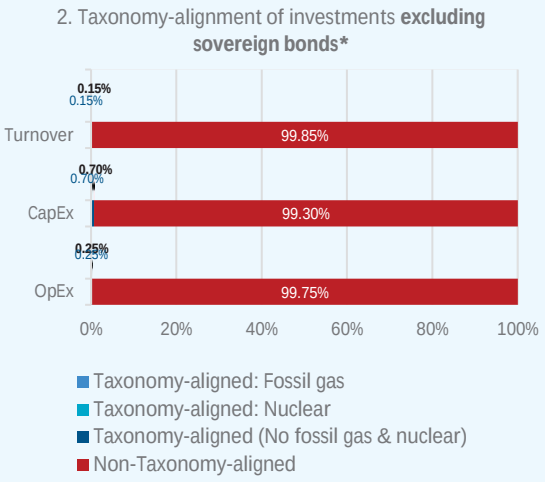
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

○ *Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?*

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 100.00% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.15%	0.70%	0.25%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.15%	0.70%	0.25%

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Non taxonomy-aligned	99.85%	99.30%	99.75%

Non taxonomy-aligned	99.85%	99.30%	99.75%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.12% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	1.79%	1.79%
Taxonomy aligned investments capex	3.01%	3.01%
Taxonomy aligned investments opex	1.97%	1.97%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 48.41%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 25.44%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - GLOBAL DIVIDEND PLUS FUND

Legal entity identifier: 549300OZL7XSDZJCL571

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 78.30% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by investing in securities of issuers with high ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics ESG including product safety, supply chain, health and safety and human rights. High ESG ratings are defined as issuers rated by Fidelity ESG ratings as a B or above, or in the absence of a rating from Fidelity, an MSCI ESG rating of A or above.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

(i) the percentage of the Fund invested in securities of issuers with high ESG ratings: 94.73%

(ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

During the reference period, a temporary exposure to an exclusion occurred due to an inadvertent error. The position was subsequently divested.

(iii) the percentage of the Fund invested in sustainable investments: 78.30%

(iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 41.58%

(v) the percentage of the Fund invested in sustainable investments with a social objective: 35.16%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the Fund invested in securities of issuers with high ESG rating	92.58%
% of Fund invested in securities with exposure to Exclusions	0.00%
% of Fund invested in sustainable investments	77.35%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	43.45%
% invested in sustainable investments with a social objective	31.93%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 78.30% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.56%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.16%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The

activities to make a substantial contribution to an environmental objective.

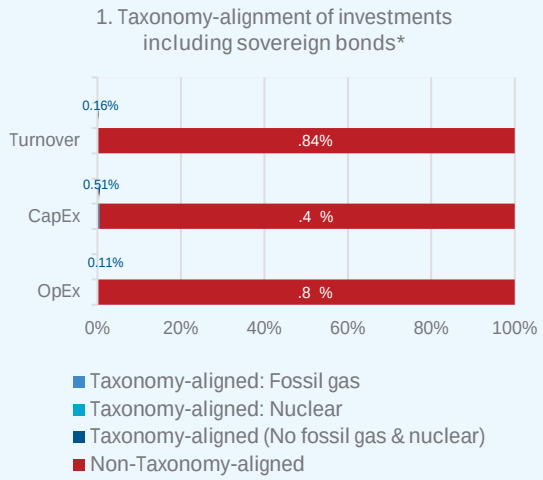
Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

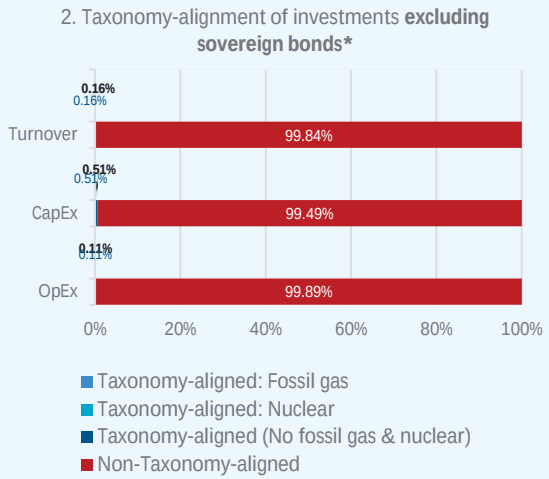
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Non taxonomy-aligned	99.84%	99.49%	99.89%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.13% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	1.15%	1.15%
Taxonomy aligned investments capex	2.41%	2.41%
Taxonomy aligned investments opex	1.35%	1.35%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

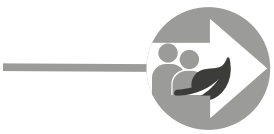
 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 41.58%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?



The quarterly average share of sustainable investments with a social objective was 35.16%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by investing in securities of issuers with high ESG ratings.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - GLOBAL EQUITY INCOME ESG FUND

Legal entity identifier: 549300ZTEIN9RSGX1S04

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 80.71% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by investing in securities of issuers with high ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics ESG including product safety, supply chain, health and safety and human rights. High ESG ratings are defined as issuers rated by Fidelity ESG ratings as a B or above, or in the absence of a rating from Fidelity, an MSCI ESG rating of A or above.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure, assessed the ESG characteristics of at least 90% of the fund's assets and the fund's investment universe was reduced by at least 20% due to the exclusion of issuers on the basis of their ESG characteristics.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

(i) the percentage of the Fund invested in securities of issuers with high ESG ratings: 93.76%

(ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

During the reference period, a temporary exposure to an exclusion occurred due to an inadvertent error. The position was subsequently divested.

(iii) the percentage of the Fund invested in sustainable investments: 80.71%

(iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 49.13%

(v) the percentage of the Fund invested in sustainable investments with a social objective: 30.60%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the Fund invested in securities of issuers with high ESG rating	90.75%
% of Fund invested in securities with exposure to Exclusions	0.00%
% of Fund invested in sustainable investments	75.48%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	38.94%
% invested in sustainable investments with a social objective	34.51%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 80.71% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

Largest Investments	Sector	% Assets	Country

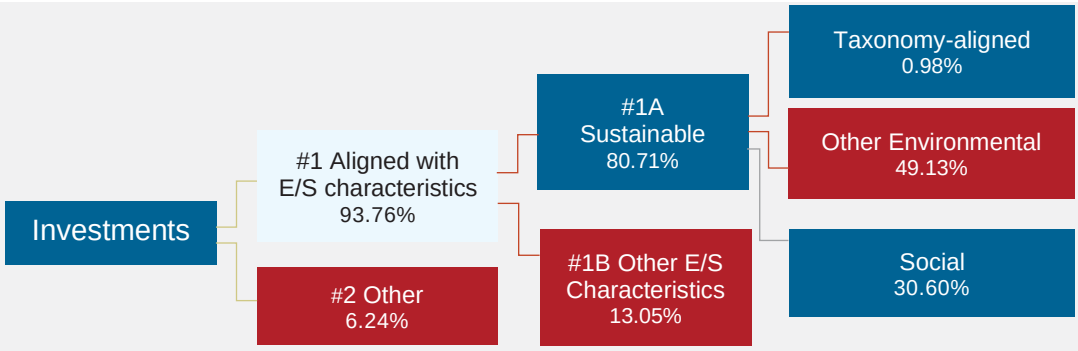
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 80.71% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 93.76%, which corresponds to the proportion of Fund invested in securities with high ESG ratings. This included 80.71% in sustainable investments of which 0.98% have an environmental objective (which is aligned with the EU Taxonomy),49.13% have an environmental objective (which is not aligned with the EU Taxonomy) and 30.60% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.98%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.19%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

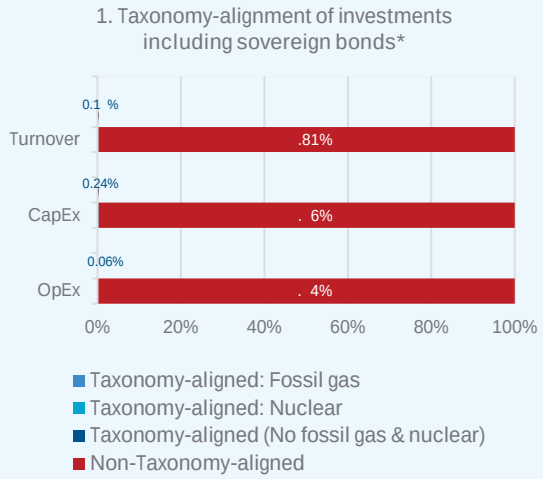
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

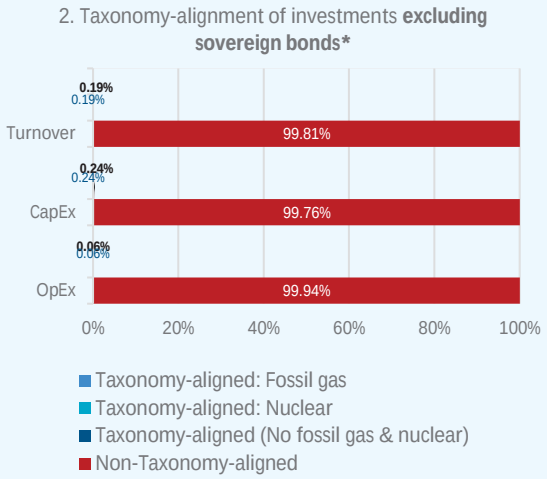
[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory

greenhouse gas emission levels corresponding to the best performance.

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 99.47% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.16% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30

note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	1.07%	1.07%
Taxonomy aligned investments capex	2.21%	2.21%
Taxonomy aligned investments opex	1.32%	1.32%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

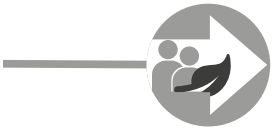
 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 49.13%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?



The quarterly average share of sustainable investments with a social objective was 30.60%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by investing in securities of issuers with high ESG ratings.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - EUROPEAN MULTI ASSET INCOME FUND

Legal entity identifier: 549300P3VQEECSQRUQ90

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 39.42% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the Fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the Fund's assets complied with the following:

• Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);

• Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;

• Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;

• Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria: 92.07%

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 39.42%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 23.18%

v) the percentage of the Fund invested in sustainable investments with a social objective:14.81%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria	93.37%
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	42.49%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	24.26%
% invested in sustainable investments with a social objective	16.15%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 39.42% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and

anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The Fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

(vi) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

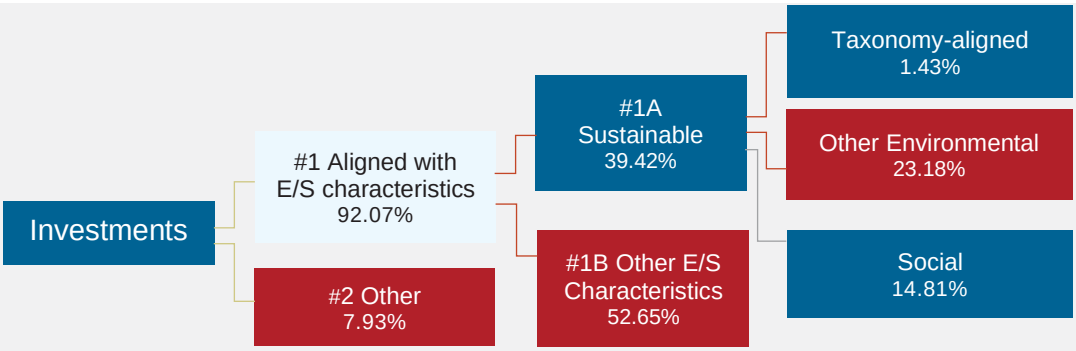
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 39.42% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 92.07%, which corresponds to the proportion of Fund complying with the Fidelity multi asset ESG criteria. This included 39.42% in sustainable investments of which 1.43% have an environmental objective (which is aligned with the EU Taxonomy) and 23.18% have an environmental objective (which is not aligned with the EU Taxonomy) and 14.81% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.43%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.20%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

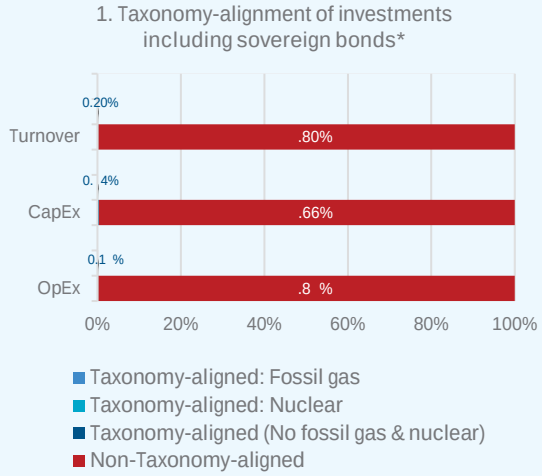
The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

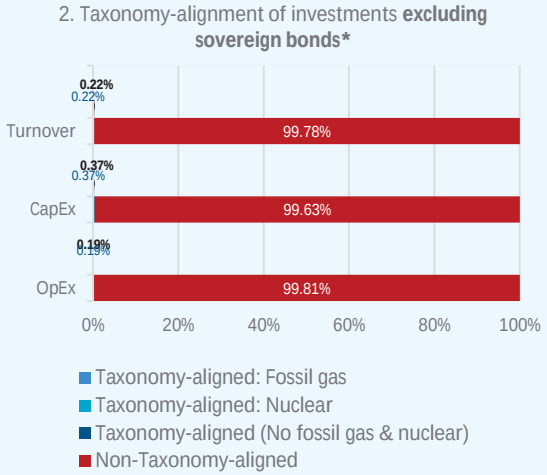
low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 91.89% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.20%	0.34%	0.17%
Non taxonomy-aligned	99.80%	99.66%	99.83%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.22%	0.37%	0.19%
Non taxonomy-aligned	99.78%	99.63%	99.81%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.01% for transitional activities and 0.10% for enabling activities, measured by Turnover.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Fidelity INTERNATIONAL

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.86%	0.93%
Taxonomy aligned investments capex	1.56%	1.69%
Taxonomy aligned investments opex	1.06%	1.14%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 23.18%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 14.81%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - GLOBAL MULTI ASSET DEFENSIVE FUND

Legal entity identifier: 5493008HJXN8FJHTHL81

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 15.27% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the Fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the Fund's assets complied with the following:

• Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);

• Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;

• Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;

• Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria: 73.28%

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 15.27%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 9.82%

v) the percentage of the Fund invested in sustainable investments with a social objective:5.20%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria	80.49%
% of Fund invested in securities with exposure to Exclusions	0.12%
% invested in sustainable investments	18.66%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	11.00%
% invested in sustainable investments with a social objective	7.39%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 15.27% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and

anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The Fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

(vi) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

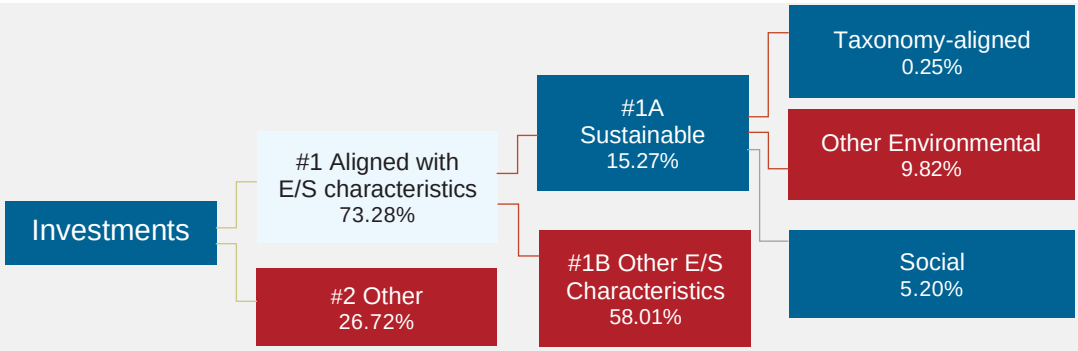
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 15.27% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 73.28%, which corresponds to the proportion of Fund complying with the Fidelity multi asset ESG criteria. This included 15.27% in sustainable investments of which 0.25% have an environmental objective (which is aligned with the EU Taxonomy) and 9.82% have an environmental objective (which is not aligned with the EU Taxonomy) and 5.20% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.25%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.20%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

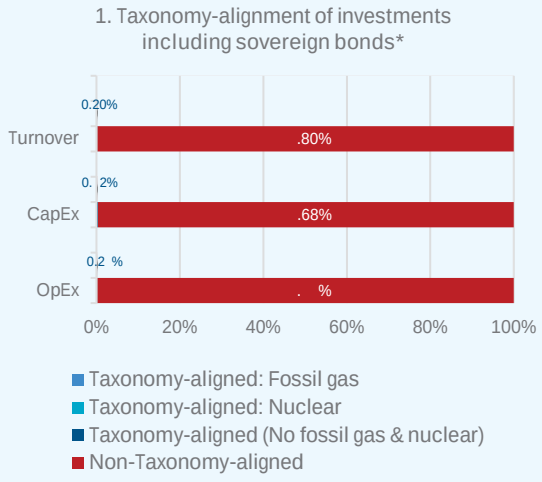
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

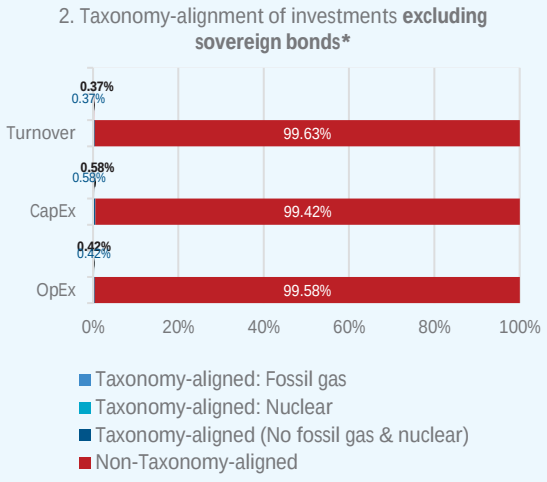
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 52.56% of the total investments.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.20%	0.32%	0.23%
Non taxonomy-aligned	99.80%	99.68%	99.77%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.37%	0.58%	0.42%
Non taxonomy-aligned	99.63%	99.42%	99.58%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.18% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.37%	0.60%
Taxonomy aligned investments capex	0.52%	0.87%
Taxonomy aligned investments opex	0.33%	0.54%

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.82%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 5.20%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for

investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - GLOBAL MULTI ASSET GROWTH & INCOME FUND

Legal entity identifier: 5493008F45JC2MQ5TU47

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 19.50% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the Fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the Fund's assets complied with the following:

• Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);

• Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;

• Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;

• Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria: 73.53%

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 19.50%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 12.52%

v) the percentage of the Fund invested in sustainable investments with a social objective:6.68%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria	78.65%
% of Fund invested in securities with exposure to Exclusions	15.75%
% invested in sustainable investments	24.98%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	14.81%
% invested in sustainable investments with a social objective	9.85%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 19.50% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and

anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The Fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

(vi) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

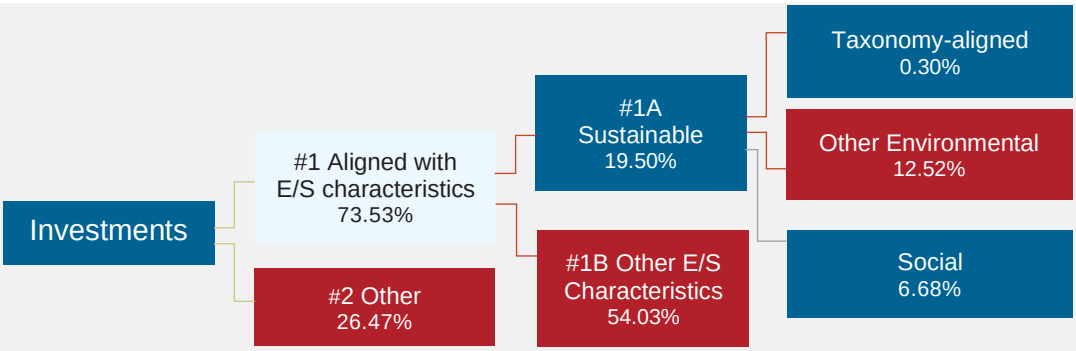
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 19.50% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 73.53%, which corresponds to the proportion of Fund complying with the Fidelity multi asset ESG criteria. This included 19.50% in sustainable investments of which 0.30% have an environmental objective (which is aligned with the EU Taxonomy) and 12.52% have an environmental objective (which is not aligned with the EU Taxonomy) and 6.68% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.30%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.06%

2) climate change adaptation: 0.00%

of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

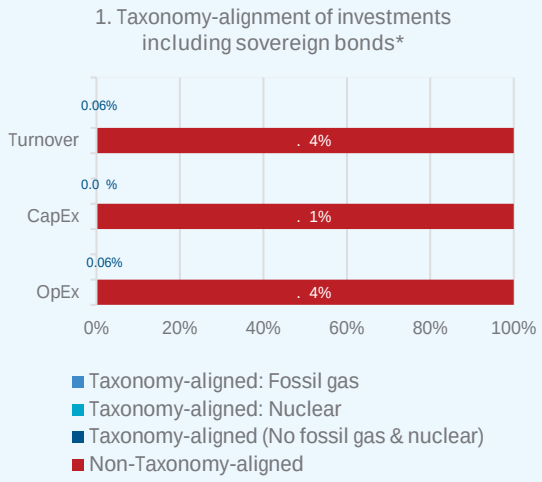
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

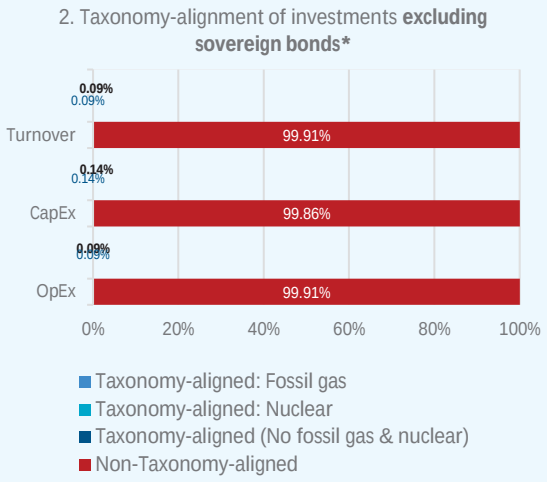
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 65.04% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.06%	0.09%	0.06%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.09%	0.14%	0.09%

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Fidelity INTERNATIONAL

Non taxonomy-aligned	99.94%	99.91%	99.94%

Non taxonomy-aligned	99.91%	99.86%	99.91%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.05% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.28%	0.41%
Taxonomy aligned investments capex	0.53%	0.79%
Taxonomy aligned investments opex	0.33%	0.50%

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 12.52%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 6.68%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - GLOBAL MULTI ASSET INCOME FUND

Legal entity identifier: 549300ISMCTFO21OMK36

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 26.19% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the Fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the Fund's assets complied with the following:

• Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);

• Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;

• Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;

• Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria: 83.90%

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 26.19%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 17.39%

v) the percentage of the Fund invested in sustainable investments with a social objective:8.05%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria	90.84%
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	33.17%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	18.84%
% invested in sustainable investments with a social objective	12.01%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 26.19% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and

anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The Fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

(vi) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

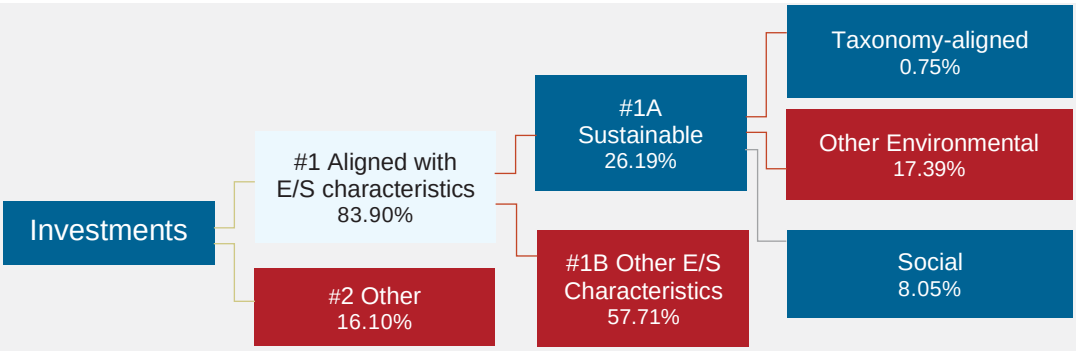
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 26.19% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 83.90%, which corresponds to the proportion of Fund complying with the Fidelity multi asset ESG criteria. This included 26.19% in sustainable investments of which 0.75% have an environmental objective (which is aligned with the EU Taxonomy) and 17.39% have an environmental objective (which is not aligned with the EU Taxonomy) and 8.05% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear**

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.75%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.06%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

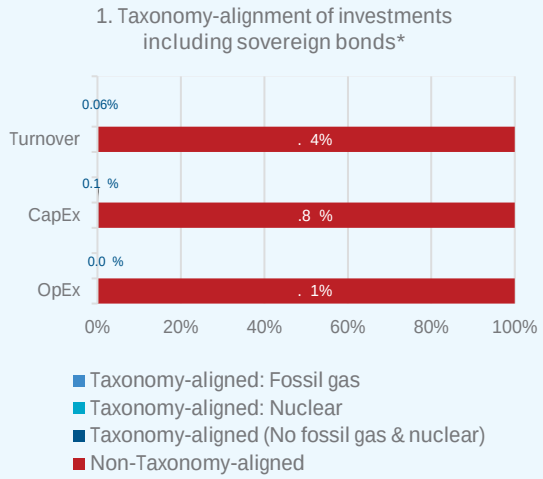
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

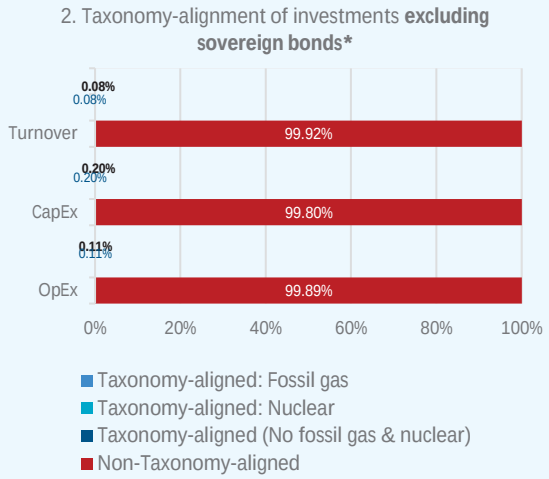
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 80.82% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.06%	0.17%	0.09%
Non taxonomy-aligned	99.94%	99.83%	99.91%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.08%	0.20%	0.11%
Non taxonomy-aligned	99.92%	99.80%	99.89%

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.03% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.60%	0.68%
Taxonomy aligned investments capex	1.04%	1.20%
Taxonomy aligned investments opex	0.71%	0.82%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 17.39%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 8.05%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - GLOBAL MULTIPLE OPPORTUNITIES FUND

Legal entity identifier: 549300GG6X1NDTLYIF66

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 54.92% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the Fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the Fund's assets complied with the following:

• Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);

• Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;

• Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;

• Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria: 94.11%

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 54.92%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 33.43%

v) the percentage of the Fund invested in sustainable investments with a social objective:19.60%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria	93.75%
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	39.86%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	23.20%
% invested in sustainable investments with a social objective	14.55%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 54.92% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and

anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The Fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

(vi) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

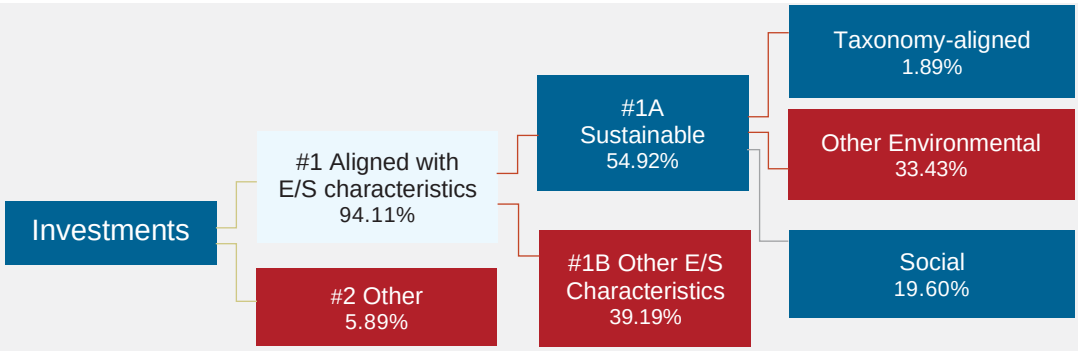
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 54.92% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 94.11%, which corresponds to the proportion of Fund complying with the Fidelity multi asset ESG criteria. This included 54.92% in sustainable investments of which 1.89% have an environmental objective (which is aligned with the EU Taxonomy) and 33.43% have an environmental objective (which is not aligned with the EU Taxonomy) and 19.60% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.89%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.69%

2) climate change adaptation: 0.68%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

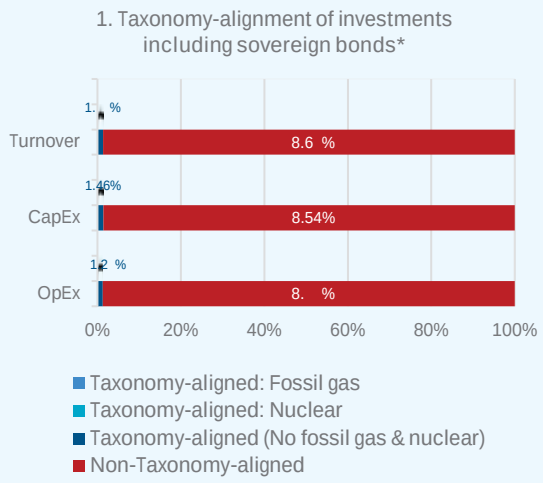
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

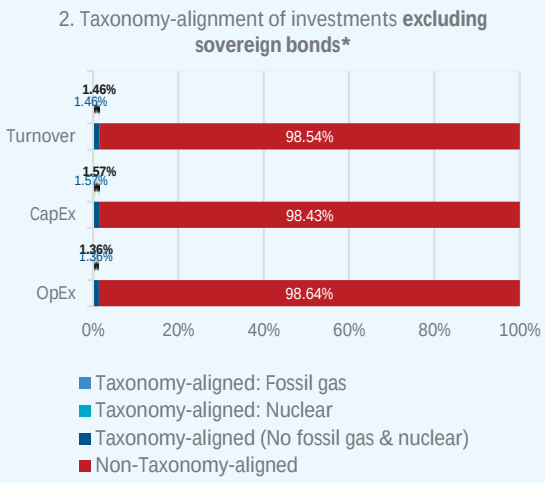
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 88.66% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	1.37%	1.46%	1.27%
Non taxonomy-aligned	98.63%	98.54%	98.73%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	1.46%	1.57%	1.36%
Non taxonomy-aligned	98.54%	98.43%	98.64%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.68% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.56%	0.65%
Taxonomy aligned investments capex	0.97%	1.13%
Taxonomy aligned investments opex	0.73%	0.85%

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 33.43%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 19.60%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - ASIA PACIFIC BOND ESG FUND

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 38.94% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than that of its benchmark, after excluding 20% of assets with the lowest ESG ratings. ESG scores were determined by reference to ESG ratings.

ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at Sustainable investing framework and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social

How did the sustainability indicators perform?

characteristics promoted by the financial product are attained.

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the ESG score of the Fund measured against the ESG score of its benchmark excluding 20% of assets with the lowest ESG ratings: 7.02 vs. 6.94

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 38.94%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 25.05%

v) the percentage of the Fund invested in sustainable investments with a social objective: 13.38%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund measured against the ESG score of its benchmark excluding 20% of assets with the lowest ESG ratings	6.84 vs.6.76
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	30.12%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	18.48%
% invested in sustainable investments with a social objective	10.23%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 38.94% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The

investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

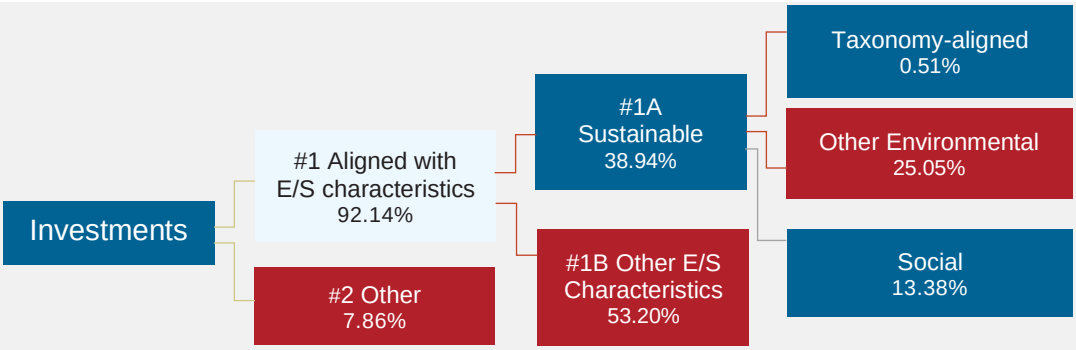
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 38.94% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 92.14%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than that of its benchmark, after excluding 20% of securities with the lowest ESG rating . This included 38.94% in sustainable investments of which 0.51% have an environmental objective (which is aligned with the EU Taxonomy) and 25.05% have an environmental objective (which is not aligned with the EU Taxonomy) and 13.38% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.51%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

5) pollution prevention and control : 0.00%

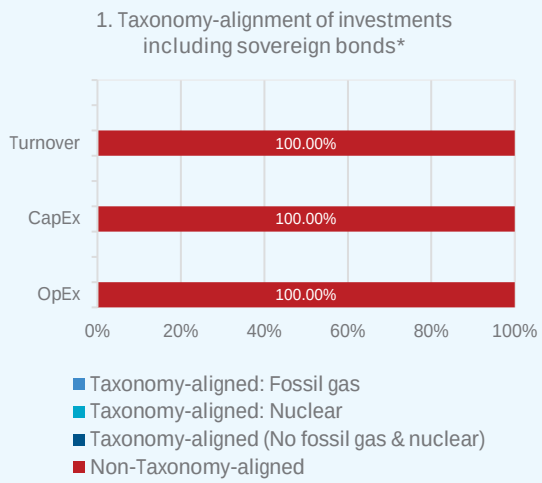
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

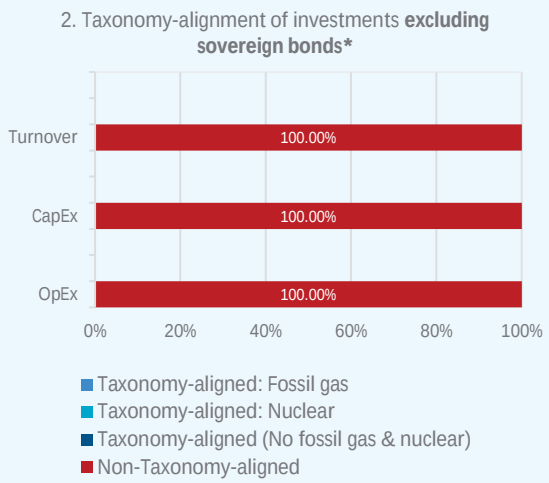
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 95.29% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.41%	0.42%
Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.00%	0.00%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 25.05%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 13.38%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark, after excluding 20% of assets with the lowest ESG ratings.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 28.80% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the Fund's investment universe. The investment universe comprised a blend of the CNHJ Index (ICE BofA China Offshore Broad Market Index),the G0CN Index (ICE BofA China Government Index) and the CN0C Index (ICE BofA ChinaCorporate Index).

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the investment universe. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's investment universe using an equal weighted method of calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the ESG score of the Fund's portfolio measured against the ESG score of the Fund's investment universe: 6.53 vs.4.97

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 28.80%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 25.34%

v) the percentage of the Fund invested in sustainable investments with a social objective: 3.46%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of the fund's investment universe	6.02 vs.4.88
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	11.58%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	8.29%
% invested in sustainable investments with a social objective	3.15%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 28.80% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

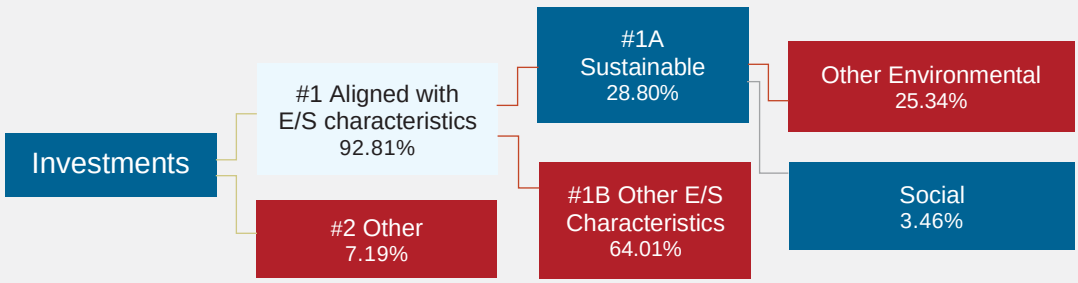
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 28.80% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 92.81%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its investment universe. This included 28.80% in sustainable investments of which 0.00% have an environmental objective (which is aligned with the EU Taxonomy) and 25.34% have an environmental objective (which is not aligned with the EU Taxonomy) and 3.46% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.00%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

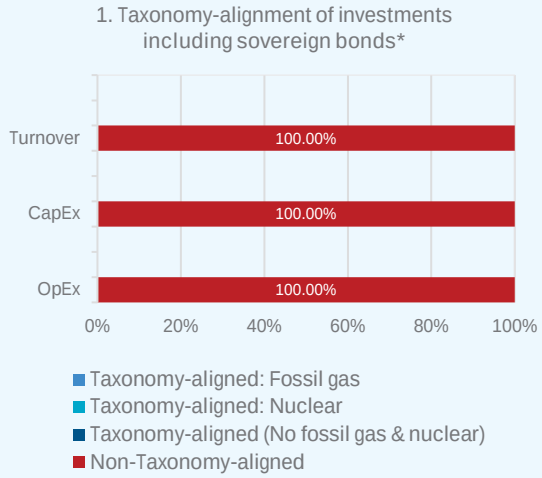
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

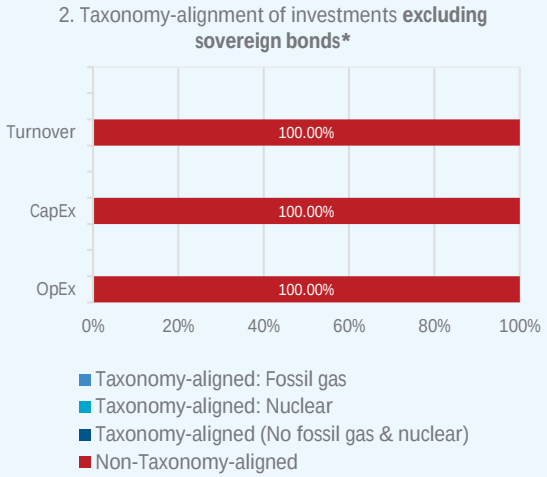
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 92.71% of the total investments.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.07%	0.08%
Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.08%	0.09%

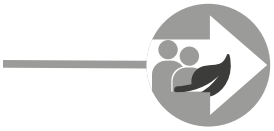
Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 25.34%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.



What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 3.46%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the Fund's investment universe.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - CLIMATE TRANSITION BOND FUND

Legal entity identifier: 549300L1AKMJ4PE06T04

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 75.33% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by investing in bonds or bonds of issuers that are supporting the climate transition through investments which (i) contribute to climate objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); (ii) use bond proceeds to finance projects benefiting environmental or climate-related sustainability; (iii) aim to improve management of climate-related risks and opportunities.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the percentage of the fund used to meet the environmental or social characteristics promoted by the Fund: 85.79%

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 75.33%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy: 3.98%

v) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 62.46%

vi) the percentage of the Fund invested in sustainable investments with a social objective: 8.89%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the Fund used to meet the environmental or social characteristics promoted by the Fund	83.23%
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	78.72%
% invested in sustainable investments with environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy	4.38%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	58.20%
% invested in sustainable investments with a social objective	16.14%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 75.33% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The

investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 3.98%. This contributed to the following environmental objectives:

1) climate change mitigation: 1.71%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

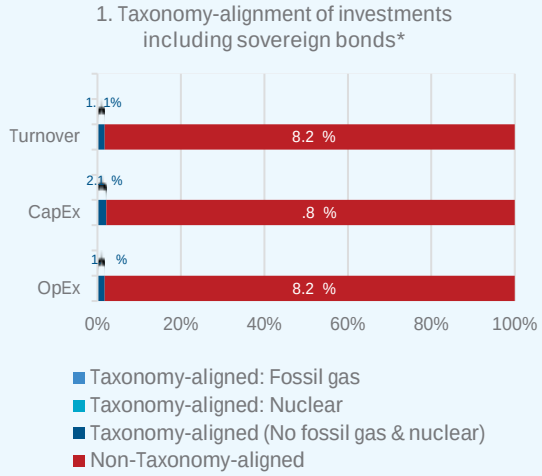
The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

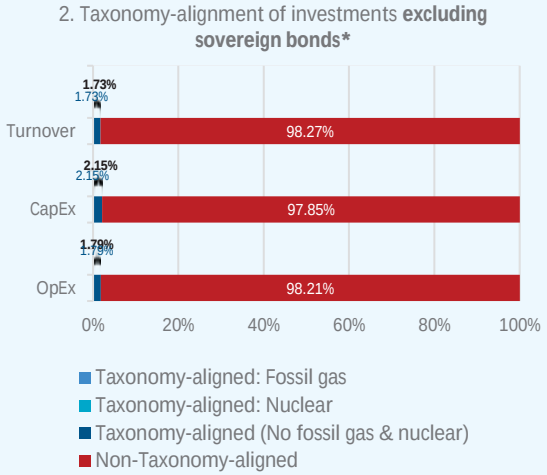
low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 95.90% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	1.71%	2.13%	1.77%
Non taxonomy-aligned	98.29%	97.87%	98.23%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	1.73%	2.15%	1.79%
Non taxonomy-aligned	98.27%	97.85%	98.21%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 1.60% for enabling activities, measured by Turnover.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	2.90%	2.92%
Taxonomy aligned investments capex	4.47%	4.47%
Taxonomy aligned investments opex	3.76%	3.79%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 62.46%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 8.89%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aligning to the fund's sustainability theme
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - EMERGING MARKET CORPORATE DEBT FUND

Legal entity identifier: 549300CUU5R1E8GYA005

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 27.12% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social

How did the sustainability indicators perform?

characteristics promoted by the financial product are attained.

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 5.6 vs. 5.48

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 27.12%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 20.07%

v) the percentage of the Fund invested in sustainable investments with a social objective: 6.72%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	5.67 vs.5.42
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	23.96%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	15.06%
% invested in sustainable investments with a social objective	8.51%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 27.12% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The

investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

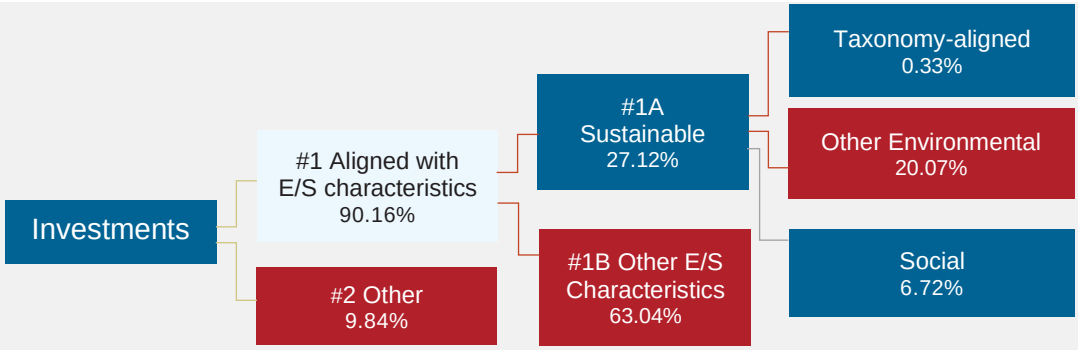
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 27.12% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 90.16%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 27.12% in sustainable investments of which 0.33% have an environmental objective (which is aligned with the EU Taxonomy) and 20.07% have an environmental objective (which is not aligned with the EU Taxonomy) and 6.72% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.33%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

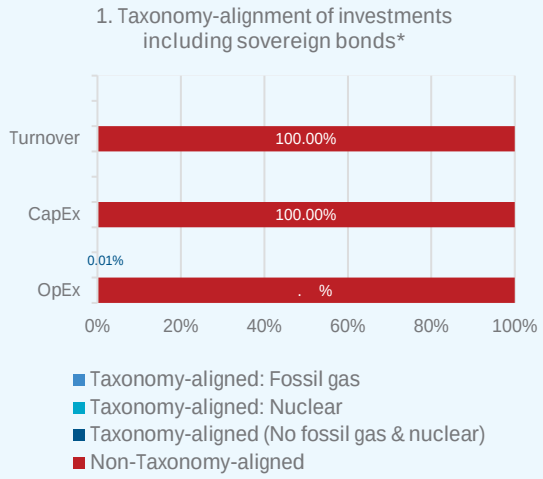
The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

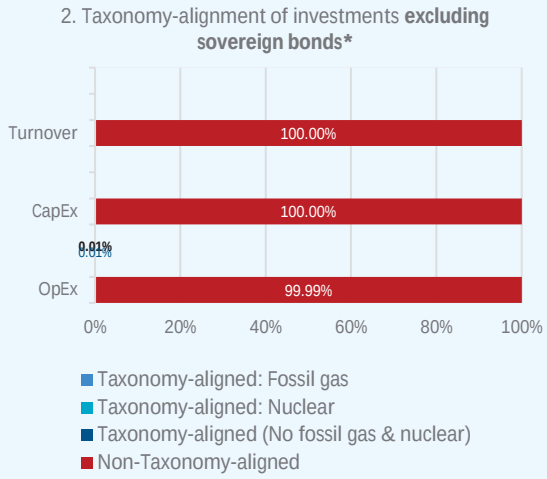
Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*

☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*



[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 99.44% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.00%	0.00%
Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.00%	0.00%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 20.07%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 6.72%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

Not Applicable

How did this financial product perform compared with the broad market index?

Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - EMERGING MARKET DEBT FUND

Legal entity identifier: 549300JD9HLR74D69D63

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 0.00% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 4.31 vs.4.22

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	4.42 vs.4.22
% of Fund invested in securities with exposure to Exclusions	0.00%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

Largest Investments	Sector	% Assets	Country

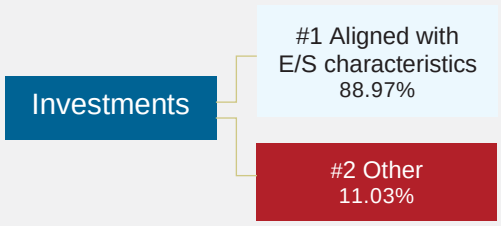
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 88.97%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.00%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control: 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

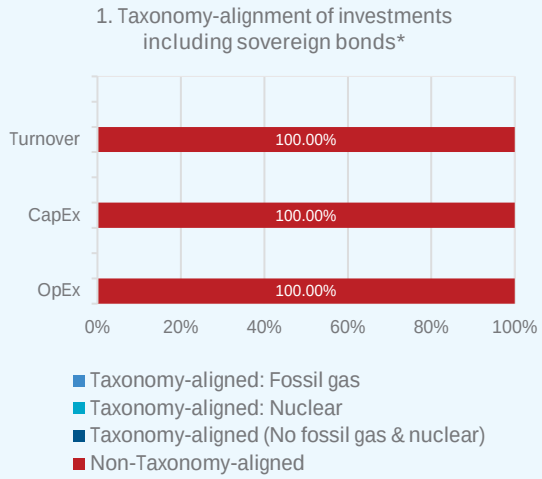
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

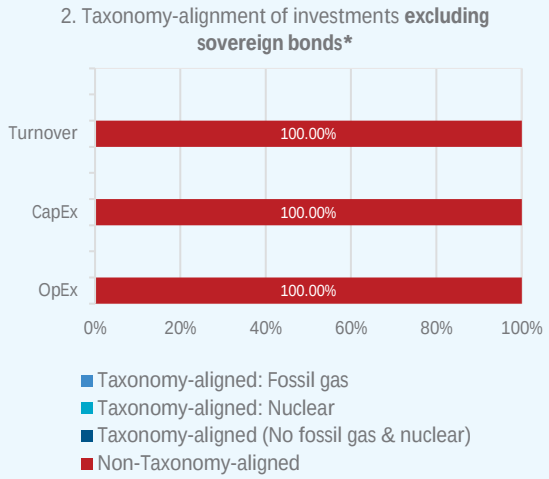
[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory

greenhouse gas emission levels corresponding to the best performance.

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 22.23% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30

note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.00%	0.00%
Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.00%	0.00%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The Fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - EMERGING MARKET LOCAL CURRENCY DEBT FUND

Legal entity identifier: 54930069WRF2L8MHEJ66

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 0.00% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social

How did the sustainability indicators perform?

characteristics promoted by the financial product are attained.

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 5.14 vs.4.69

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	5.31 vs.4.75
% of Fund invested in securities with exposure to Exclusions	0.00%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

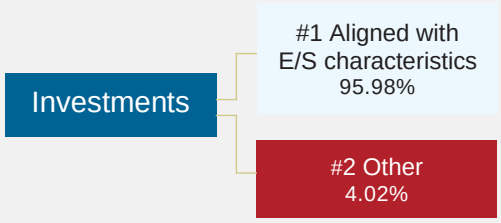
The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 95.98%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Subsector	% Assets
GOVERNMENT	GOVERNMENT	86.07 %
FINANCIALS	COMMERCIAL BANKS	7.66 %
OPEN ENDED FUND	CLOSED ENDED CASH FUND	1.13 %

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.00%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control: 0.00%

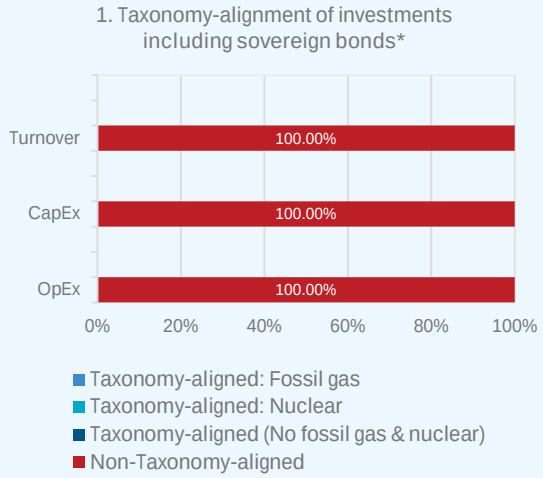
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

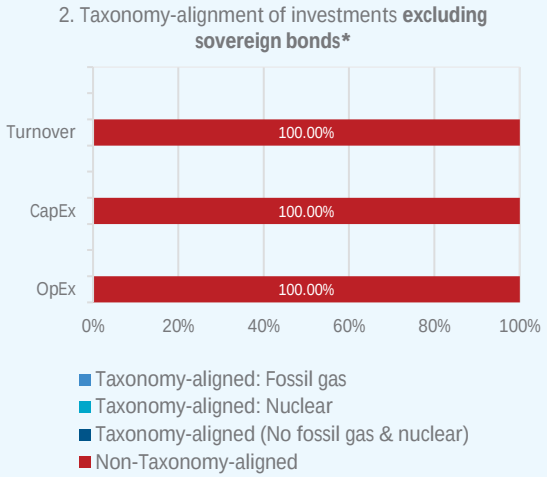
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 10.01% of the total investments.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

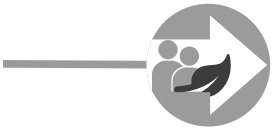
How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.00%	0.00%
Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.00%	0.00%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?



The Fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The Fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - EMERGING MARKET TOTAL RETURN DEBT FUND

Legal entity identifier: 549300KHEVIR0ORYSU77

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 0.00% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social

How did the sustainability indicators perform?

characteristics promoted by the financial product are attained.

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 4.85 vs.4.81

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	5.11 vs.4.82
% of Fund invested in securities with exposure to Exclusions	0.00%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

Largest Investments	Sector	% Assets	Country

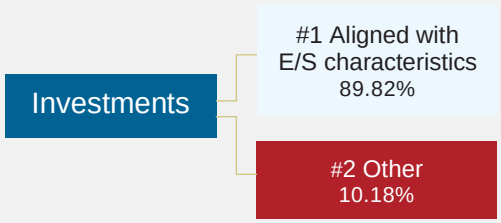
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 89.82%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Subsector	% Assets
GOVERNMENT	GOVERNMENT	77.27 %
FINANCIALS	COMMERCIAL BANKS	6.81 %

GOVERNMENT	BONDS	0.22 %
MATERIALS	METALS & MINING	0.20 %

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.00%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control: 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

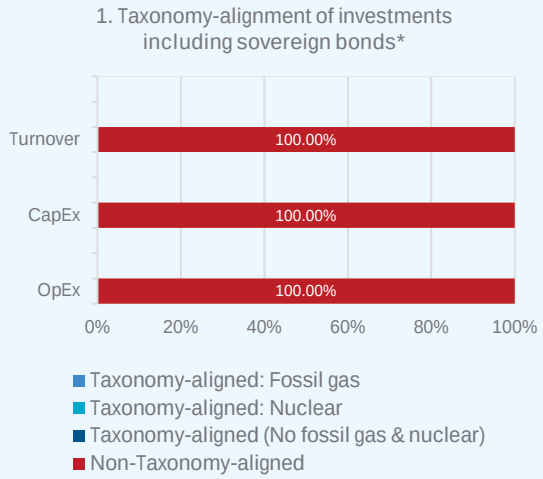
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

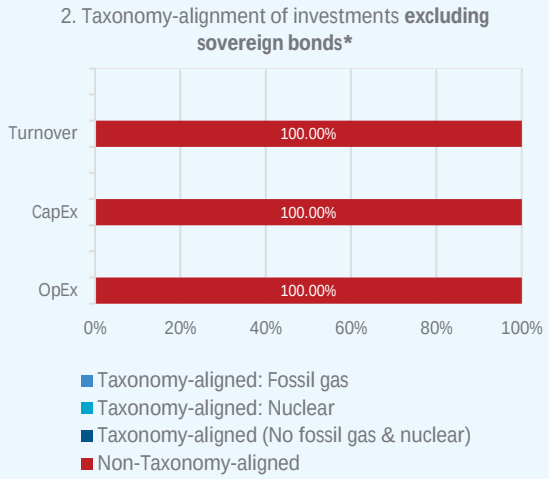
[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

levels corresponding to the best performance.

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 19.80% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.00%	0.00%

Fidelity INTERNATIONAL

Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.00%	0.00%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The Fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - EURO BOND FUND

Legal entity identifier: 5493001EOTLEJOW4P129

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 10.36% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 7.36 vs.6.86

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 10.36%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 7.12%

v) the percentage of the Fund invested in sustainable investments with a social objective: 2.87%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	7.49 vs.6.86
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	30.61%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	16.71%
% invested in sustainable investments with a social objective	12.56%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 10.36% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

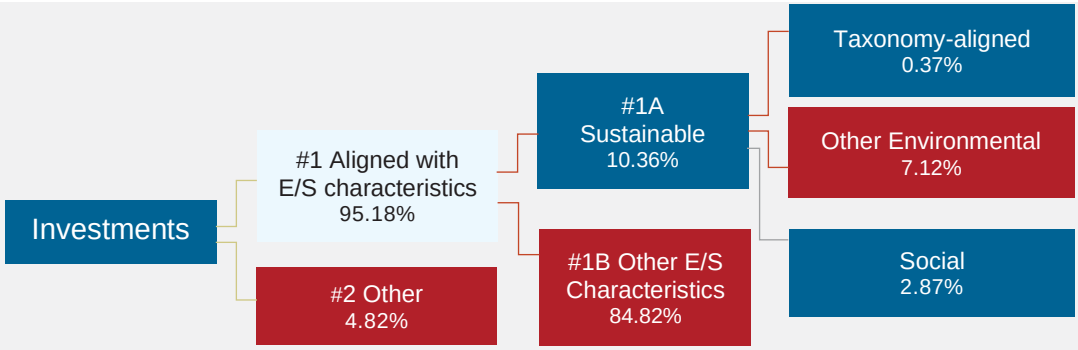
Largest Investments	Sector	% Assets	Country
GERMANY 2.5% 15/	GOVERNMENT	25.10 %	GERMANY
GERMANY 2.4% 18/04/2030 REGS	GOVERNMENT	13.37 %	GERMANY
SPAIN 3.15% 30/04/2035 144A	GOVERNMENT	9.54 %	SPAIN
GERMANY 3.1% 12/12/2025 REGS	GOVERNMENT	8.19 %	GERMANY

Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 10.36% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 95.18%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 10.36% in sustainable investments of which 0.37% have an environmental objective (which is aligned with the EU Taxonomy) and 7.12% have an environmental objective (which is not aligned with the EU Taxonomy) and 2.87% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Subsector	% Assets
GOVERNMENT	GOVERNMENT	82.80 %
OPEN ENDED FUND	CLOSED ENDED CASH FUND	3.95 %
FINANCIALS	DIVERSIFIED FINANCIAL SERVICES	1.73 %
GOVERNMENT	CORPORATE BONDS	1.55 %
UTILITIES	MULTI-UTILITIES	1.49 %
CONSUMER STAPLES	FOOD & STAPLES RETAILING	1.26 %
UTILITIES	ELECTRIC UTILITIES	1.12 %
HEALTHCARE	HEALTH CARE EQUIPMENT & SUPPLIES	1.05 %
CONSUMER STAPLES	HOUSEHOLD PRODUCTS	0.84 %
INFORMATION TECHNOLOGY	INTERNET SOFTWARE & SERVICES	0.72 %
MATERIALS	CHEMICALS	0.68 %
COMMUNICATION SERVICES	DIVERSIFIED TELECOMMUNICATION SERVICES	0.29 %
HEALTHCARE	PHARMACEUTICALS	0.16 %
ENERGY	OIL, GAS & CONSUMABLE FUELS	0.06 %

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.37%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control: 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

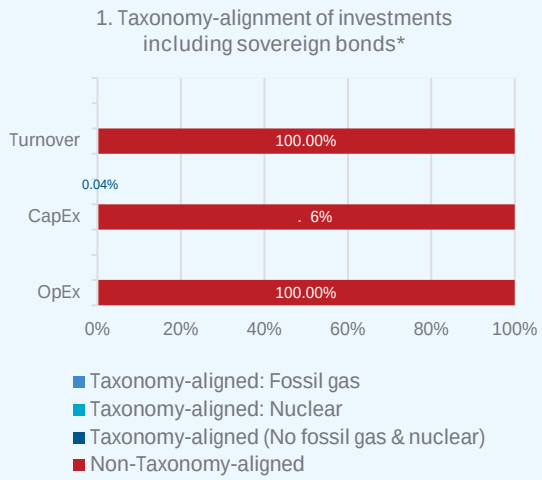
The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

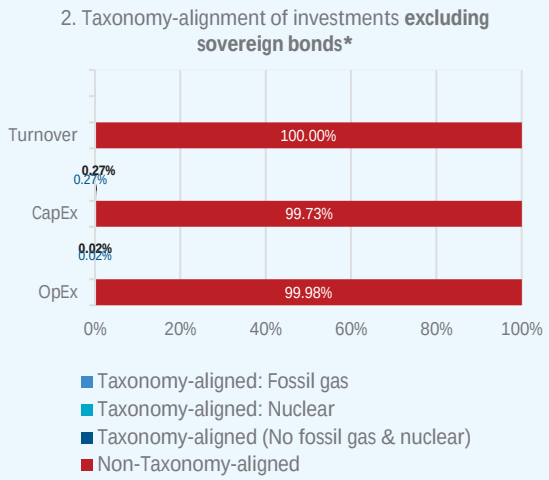
Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*

☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*



Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

This graph represents 14.14% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.04%	0.00%
Non taxonomy-aligned	100.00%	99.96%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.27%	0.02%
Non taxonomy-aligned	100.00%	99.73%	99.98%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.84%	1.10%
Taxonomy aligned investments capex	2.00%	2.69%
Taxonomy aligned investments opex	1.72%	2.33%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.12%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 2.87%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - EURO CORPORATE BOND FUND

Legal entity identifier: 549300HVFD74DI2L1428

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 56.27% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 7.22 vs. 6.96

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 56.27%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 44.54%

v) the percentage of the Fund invested in sustainable investments with a social objective: 10.20%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	7.25 vs.6.9
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	52.61%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	32.91%
% invested in sustainable investments with a social objective	17.26%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 56.27% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

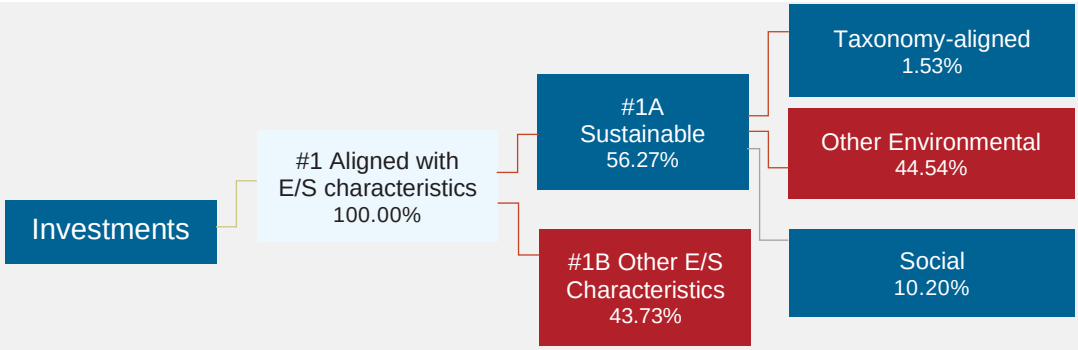
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 56.27% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100.00%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 56.27% in sustainable investments of which 1.53% have an environmental objective (which is aligned with the EU Taxonomy) and 44.54% have an environmental objective (which is not aligned with the EU Taxonomy) and 10.20% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.53%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.24%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in

substantial contribution to an environmental objective.

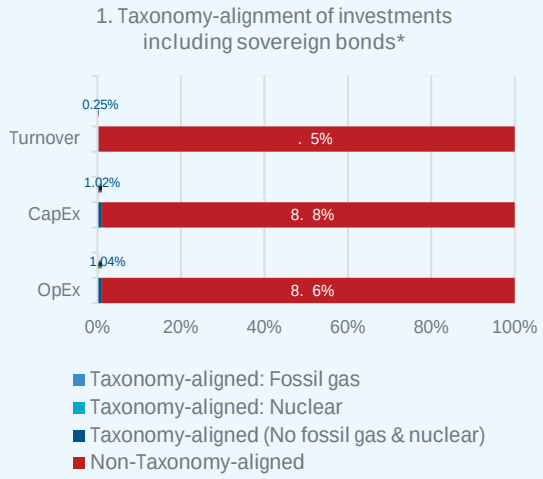
Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

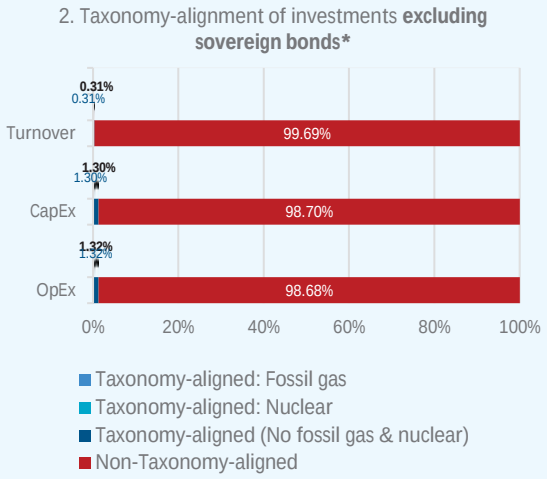
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 81.91% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.25%	1.02%	1.04%
Non taxonomy-aligned	99.75%	98.98%	98.96%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.31%	1.30%	1.32%
Non taxonomy-aligned	99.69%	98.70%	98.68%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.24% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	1.38%	1.54%
Taxonomy aligned investments capex	3.79%	4.29%
Taxonomy aligned investments opex	3.28%	3.73%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 44.54%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 10.20%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - EURO SHORT TERM BOND FUND

Legal entity identifier: 3NMLOFBNMWJ7JPIH6S89

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 60.21% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 7.08 vs.6.97

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 60.21%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 50.18%

v) the percentage of the Fund invested in sustainable investments with a social objective: 9.02%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	7.64 vs.6.92
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	34.80%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	24.34%
% invested in sustainable investments with a social objective	9.38%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 60.21% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

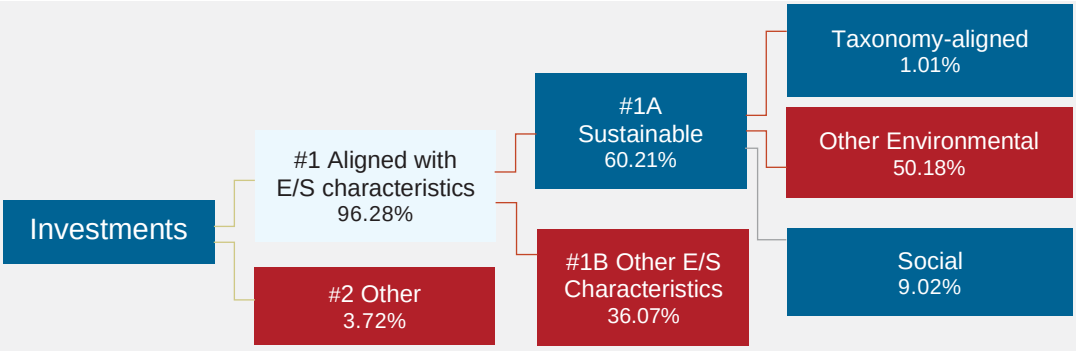
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 60.21% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 96.28%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 60.21% in sustainable investments of which 1.01% have an environmental objective (which is aligned with the EU Taxonomy) and 50.18% have an environmental objective (which is not aligned with the EU Taxonomy) and 9.02% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.01%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.09%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control: 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

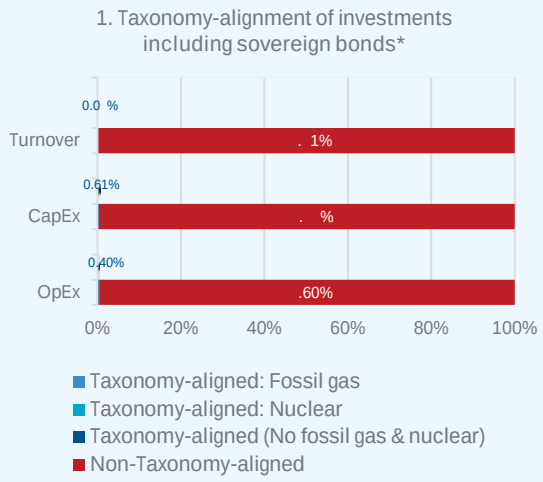
Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

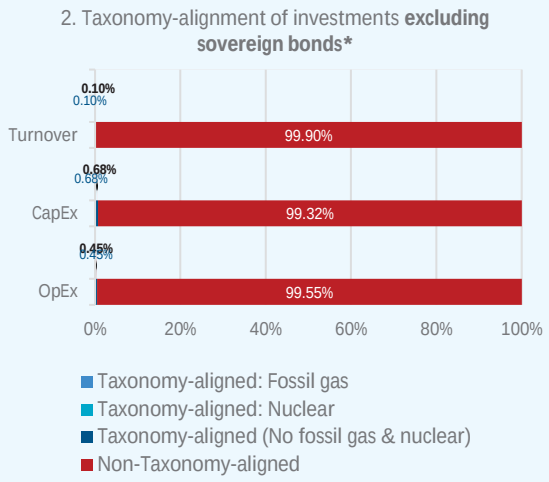
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 90.83% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.09% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.47%	0.71%
Taxonomy aligned investments capex	1.67%	2.50%
Taxonomy aligned investments opex	1.41%	2.10%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 50.18%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 9.02%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - EUROPEAN HIGH YIELD FUND

Legal entity identifier: QRZDLZXRZFWQ9BAHI598

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 26.91% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 5.58 vs. 5.57

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 26.91%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 20.79%

v) the percentage of the Fund invested in sustainable investments with a social objective: 4.66%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	5.56 vs.5.39
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	22.85%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	16.41%
% invested in sustainable investments with a social objective	5.59%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 26.91% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

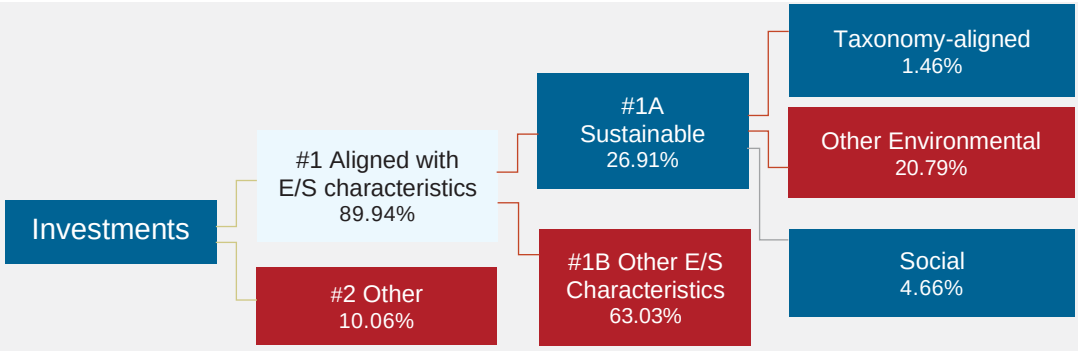
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 26.91% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 89.94%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 26.91% in sustainable investments of which 1.46% have an environmental objective (which is aligned with the EU Taxonomy) and 20.79% have an environmental objective (which is not aligned with the EU Taxonomy) and 4.66% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.46%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.30%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

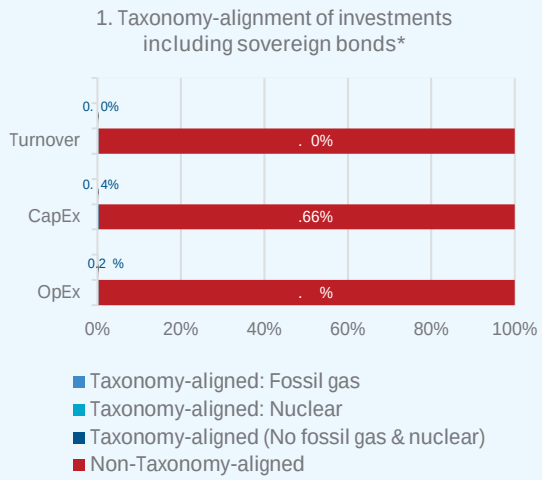
to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

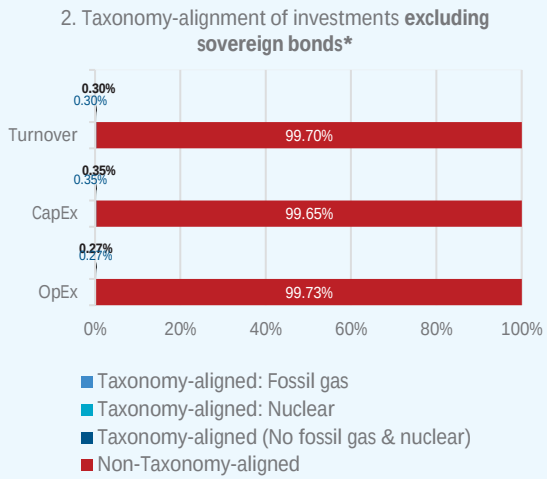
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 98.81% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.30%	0.34%	0.27%
Non taxonomy-aligned	99.70%	99.66%	99.73%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.30%	0.35%	0.27%
Non taxonomy-aligned	99.70%	99.65%	99.73%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.04% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.96%	0.96%
Taxonomy aligned investments capex	1.33%	1.33%
Taxonomy aligned investments opex	1.16%	1.16%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 20.79%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 4.66%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - FLEXIBLE BOND FUND

Legal entity identifier: Y5GJXJ4DKJON310L3I87

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 0.00% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 6.67 vs.6.53

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	6.71 vs.6.49
% of Fund invested in securities with exposure to Exclusions	0.00%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

Largest Investments	Sector	% Assets	Country

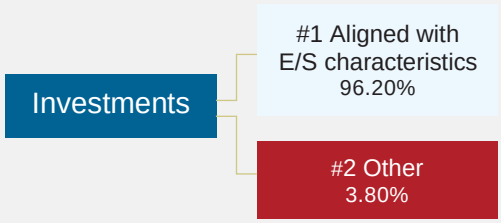
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 96.20%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Subsector	% Assets

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.00%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control: 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

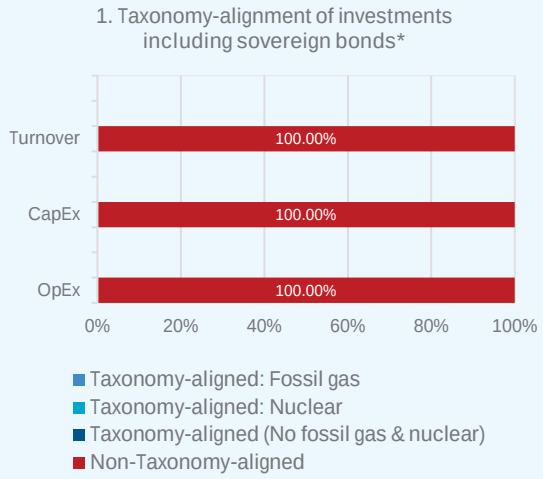
The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

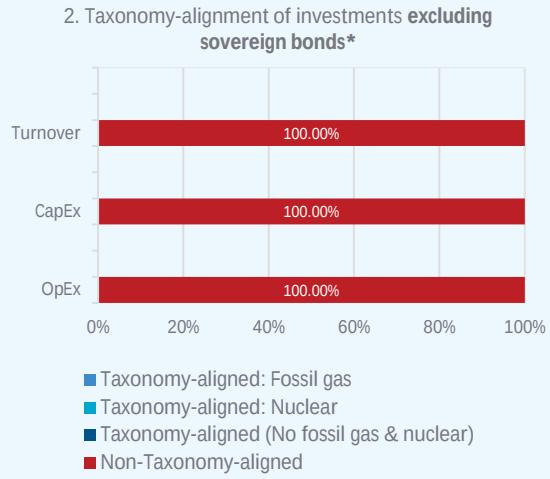
Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*

☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*



[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
-**capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
-**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 14.91% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX

Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.26%	0.39%
Taxonomy aligned investments capex	0.76%	1.12%
Taxonomy aligned investments opex	0.50%	0.74%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The Fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

Not Applicable

How did this financial product perform compared with the broad market index?

Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - GLOBAL BOND FUND

Legal entity identifier: GQ0BF6O9W3C24RB7AC25

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 10.14% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 7.04 vs.6.47

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 10.14%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 6.92%

v) the percentage of the Fund invested in sustainable investments with a social objective: 3.10%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	7.03 vs.6.5
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	13.48%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	9.90%
% invested in sustainable investments with a social objective	3.55%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 10.14% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

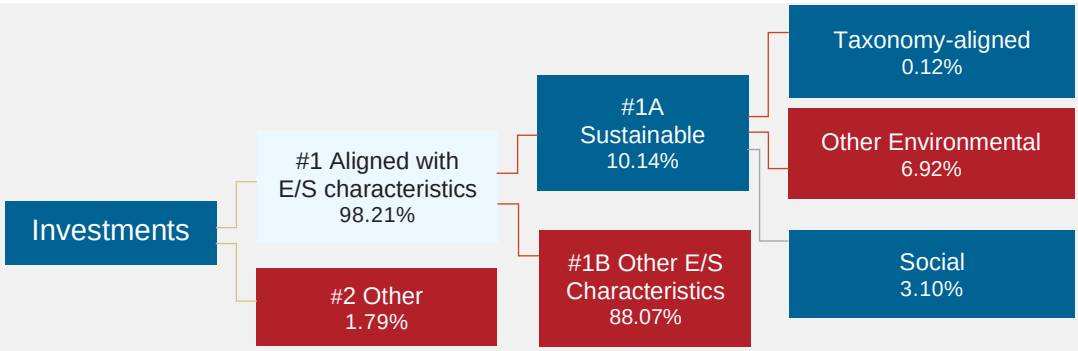
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 10.14% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.21%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 10.14% in sustainable investments of which 0.12% have an environmental objective (which is aligned with the EU Taxonomy) and 6.92% have an environmental objective (which is not aligned with the EU Taxonomy) and 3.10% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.00%	0.00%
Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.00%	0.00%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 6.92%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 3.10%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - GLOBAL CORPORATE BOND FUND

Legal entity identifier: E1PSUJKP1HSFQL89GJ11

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 52.84% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 6.9 vs. 6.64

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 52.84%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy: 1.59%

v) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 37.87%

vi) the percentage of the Fund invested in sustainable investments with a social objective: 13.38%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	6.83 vs.6.64
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	59.80%
% invested in sustainable investments with environmental objective (economic activities qualifying as environmentally sustainable under EU Taxonomy)	1.90%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	39.23%
% invested in sustainable investments with a social objective	18.67%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 52.84% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

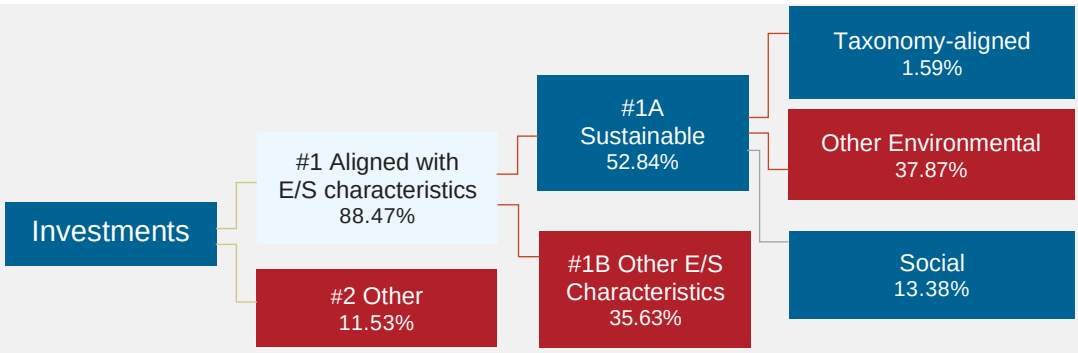
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 52.84% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 88.47%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 52.84% in sustainable investments of which 1.59% have an environmental objective (which is aligned with the EU Taxonomy) and 37.87% have an environmental objective (which is not aligned with the EU Taxonomy) and 13.38% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.59%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.48%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

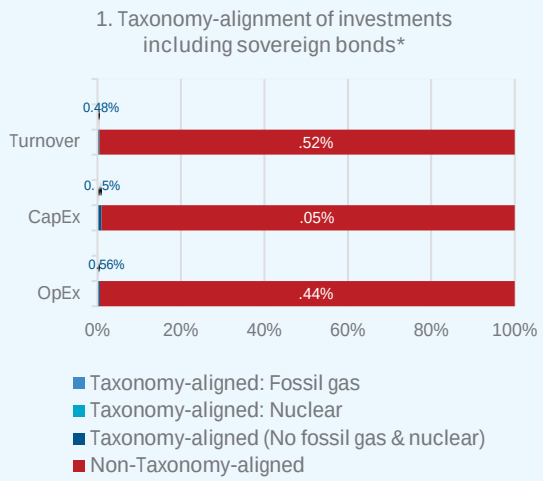
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

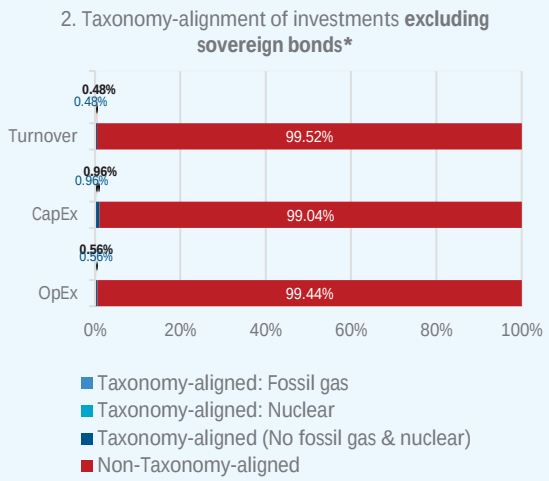
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 95.61% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.48%	0.95%	0.56%
Non taxonomy-aligned	99.52%	99.05%	99.44%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.48%	0.96%	0.56%
Non taxonomy-aligned	99.52%	99.04%	99.44%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.40% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	1.49%	1.52%
Taxonomy aligned investments capex	2.85%	2.91%
Taxonomy aligned investments opex	2.32%	2.36%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 37.87%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 13.38%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - GLOBAL HIGH YIELD FUND

Legal entity identifier: 549300HLL9VXER4ESF55

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 21.61% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 5.32 vs. 5.25

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 21.61%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 14.35%

v) the percentage of the Fund invested in sustainable investments with a social objective: 6.82%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	5.27 vs.5.14
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	17.95%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	11.32%
% invested in sustainable investments with a social objective	6.49%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 21.61% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

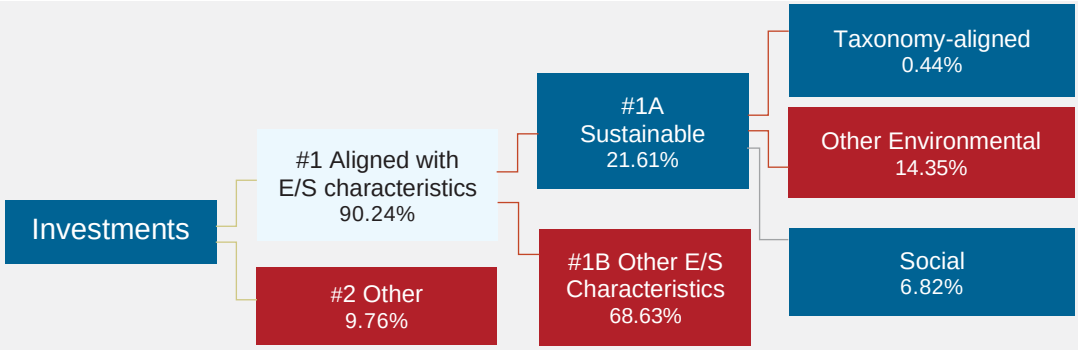
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 21.61% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 90.24%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 21.61% in sustainable investments of which 0.44% have an environmental objective (which is aligned with the EU Taxonomy) and 14.35% have an environmental objective (which is not aligned with the EU Taxonomy) and 6.82% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.44%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

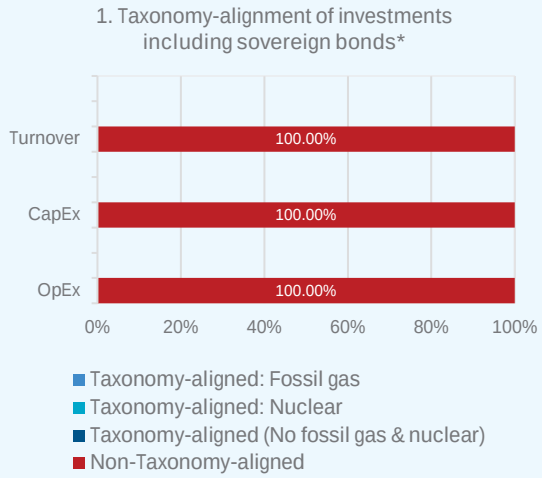
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

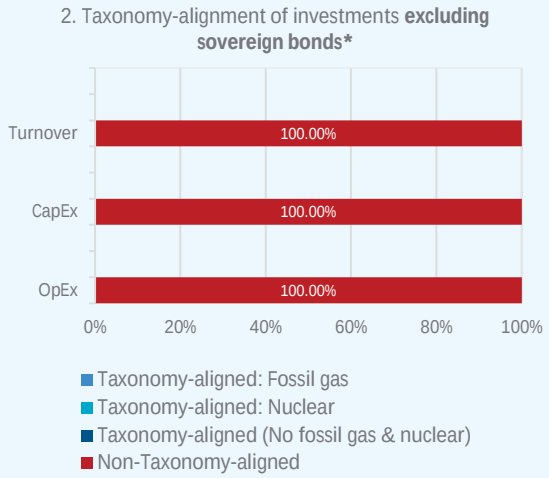
☐ *Yes:*

☐ *In fossil gas* ☐ *In nuclear energy*

☒ *No*



Taxonomy-aligned activities are expressed as a share of:



- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx)

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

reflecting green operational activities of investee companies.

This graph represents 96.79% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.02%	0.02%
Taxonomy aligned investments capex	0.07%	0.07%
Taxonomy aligned investments opex	0.05%	0.05%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 14.35%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 6.82%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - GLOBAL HYBRIDS BOND FUND

Legal entity identifier: 549300BKJXZO8Z8K9S85

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 31.88% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 6.94 vs. 6.88

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 31.88%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 19.52%

v) the percentage of the Fund invested in sustainable investments with a social objective: 10.98%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	6.9 vs.6.78
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	31.81%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	20.46%
% invested in sustainable investments with a social objective	10.71%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 31.88% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

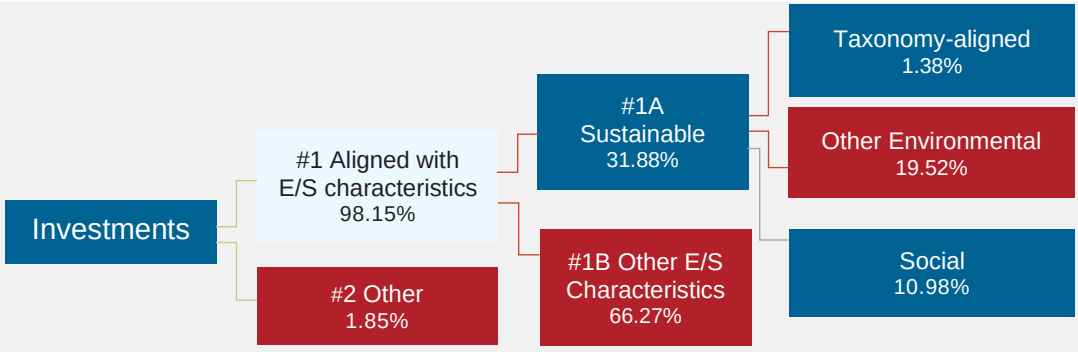
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 31.88% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.15%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 31.88% in sustainable investments of which 1.38% have an environmental objective (which is aligned with the EU Taxonomy) and 19.52% have an environmental objective (which is not aligned with the EU Taxonomy) and 10.98% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Subsector	% Assets

OPEN ENDED FUND	CLOSED ENDED CASH FUND	1.92 %
CONSUMER DISCRETIONARY	AUTOMOBILES	0.91 %
FINANCIALS	DIVERSIFIED FINANCIAL SERVICES	0.46 %

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.38%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.11%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

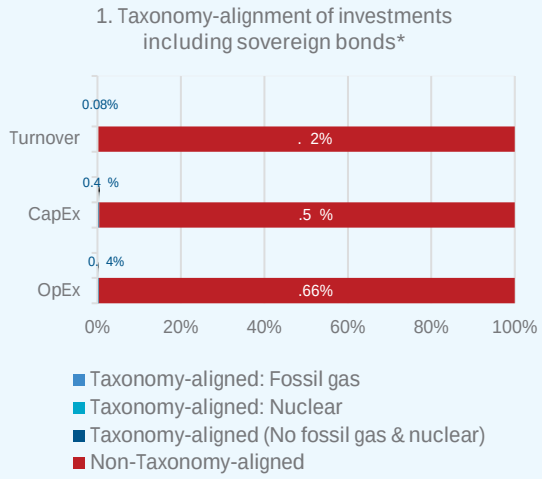
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

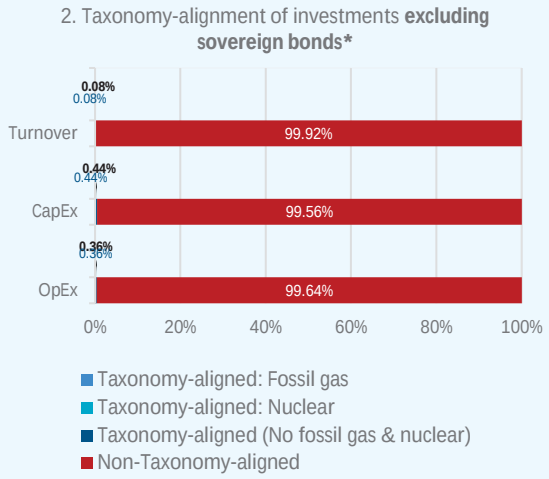
☐ *Yes:*

☐ *In fossil gas* ☐ *In nuclear energy*

☒ *No*



Taxonomy-aligned activities are expressed as a share of:



- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx)

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

reflecting green operational activities of investee companies.

This graph represents 94.35% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.08%	0.43%	0.34%
Non taxonomy-aligned	99.92%	99.57%	99.66%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.08%	0.44%	0.36%
Non taxonomy-aligned	99.92%	99.56%	99.64%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.07% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.42%	0.43%
Taxonomy aligned investments capex	1.68%	1.75%
Taxonomy aligned investments opex	1.16%	1.21%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 19.52%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 10.98%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - GLOBAL INCOME FUND

Legal entity identifier: 549300Y91PT1E5IZKI34

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 34.11% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the Fund's investment universe. The investment universe comprised a blend of Global Investment Grade corporate bonds, Global High Yield bonds and Global Emerging Market bonds.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the investment universe. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's investment universe using an equal weighted method of calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the

How did the sustainability indicators perform?

environmental or social characteristics promoted by the financial product are attained.

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the ESG score of the Fund's portfolio measured against the ESG score of the Fund's investment universe: 6.16 vs.6.06

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 34.11%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 22.94%

v) the percentage of the Fund invested in sustainable investments with a social objective: 9.87%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of the fund's investment universe	6.1 vs.6.0
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	26.49%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	17.68%
% invested in sustainable investments with a social objective	7.93%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 34.11% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The

investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

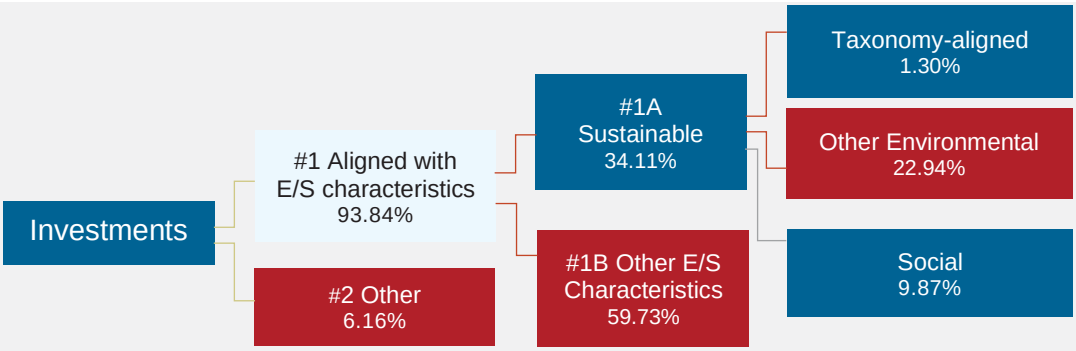
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 34.11% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 93.84%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its investment universe. This included 34.11% in sustainable investments of which 1.30% have an environmental objective (which is aligned with the EU Taxonomy) and 22.94% have an environmental objective (which is not aligned with the EU Taxonomy) and 9.87% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.30%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.14%

2) climate change adaptation: 0.02%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

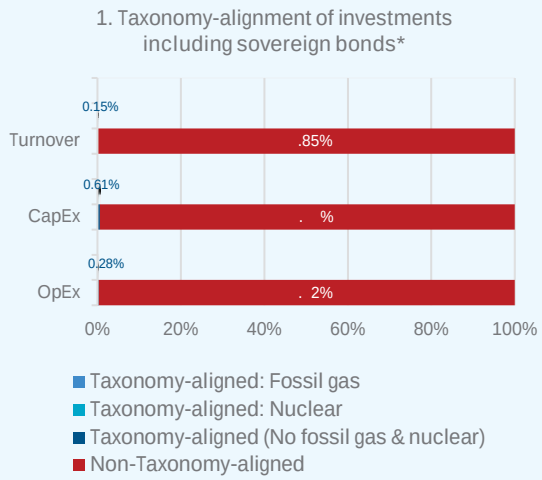
The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

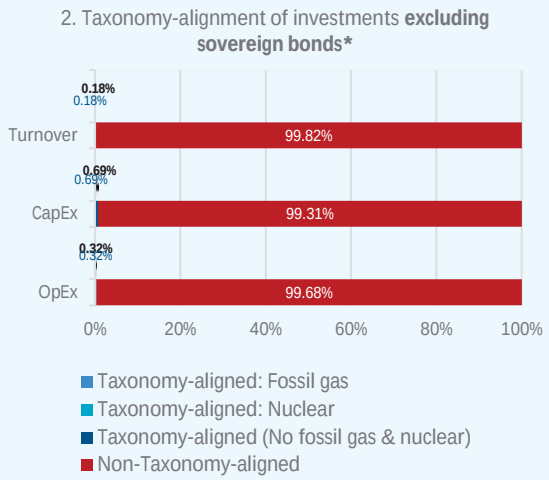
Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*

☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*



Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

This graph represents 88.42% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.15%	0.61%	0.28%
Non taxonomy-aligned	99.85%	99.39%	99.72%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.18%	0.69%	0.32%
Non taxonomy-aligned	99.82%	99.31%	99.68%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.03% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.28%	0.30%
Taxonomy aligned investments capex	1.10%	1.27%
Taxonomy aligned investments opex	0.75%	0.81%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 22.94%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 9.87%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the Fund's investment universe.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - GLOBAL INFLATION-LINKED BOND FUND

Legal entity identifier: 78VTRQN40UWE9NYCJW22

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 0.00% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 6.89 vs.6.85

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	6.97 vs.6.88
% of Fund invested in securities with exposure to Exclusions	0.00%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

Largest Investments	Sector	% Assets	Country
FRANCE .1% 01/03/2029 REGS	GOVERNMENT	8.37 %	FRANCE

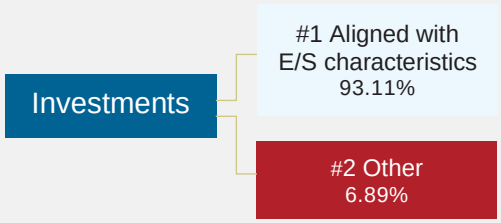
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 93.11%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Subsector	% Assets
GOVERNMENT	GOVERNMENT	92.96 %
OPEN ENDED FUND	CLOSED ENDED CASH FUND	6.21 %

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.00%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control: 0.00%

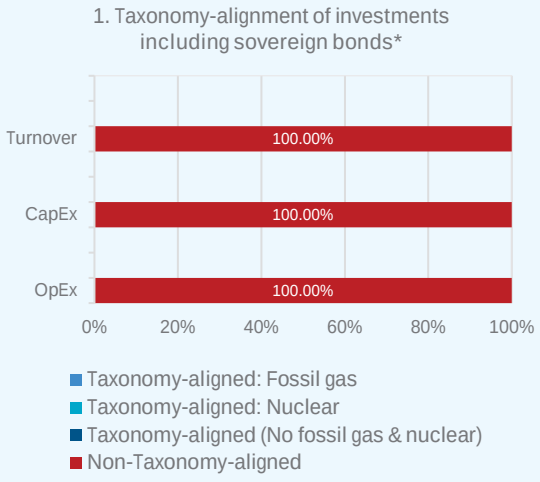
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

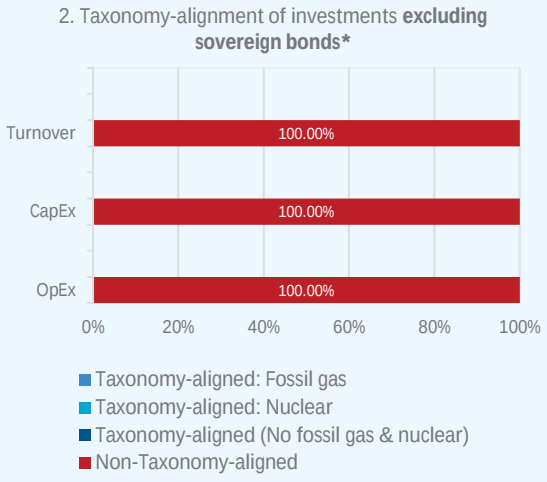
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 6.37% of the total investments.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%

Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

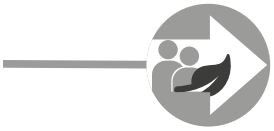
How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.00%	0.00%
Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.00%	0.00%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?



The Fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The Fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - GLOBAL SHORT DURATION INCOME FUND

Legal entity identifier: 549300DE58GK4SNQH841

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 35.35% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the Fund's investment universe. The investment universe comprised a blend of 1-3yr US, UK, European and Asian investment grade corporate bonds, Emerging Market corporate bonds and high yield bonds.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the investment universe. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's investment universe using an equal weighted method of calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the ESG score of the Fund's portfolio measured against the ESG score of the Fund's investment universe: 6.05 vs.6.03

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 35.35%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 28.14%

v) the percentage of the Fund invested in sustainable investments with a social objective: 5.57%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of the fund's investment universe	6.09 vs.5.96
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	27.37%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	22.27%
% invested in sustainable investments with a social objective	3.85%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 35.35% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

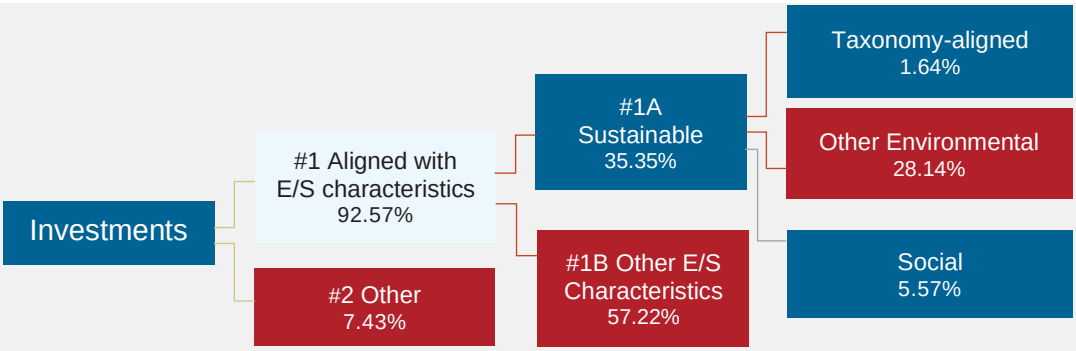
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 35.35% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 92.57%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its investment universe. This included 35.35% in sustainable investments of which 1.64% have an environmental objective (which is aligned with the EU Taxonomy) and 28.14% have an environmental objective (which is not aligned with the EU Taxonomy) and 5.57% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.64%. This contributed to the following environmental objectives:

and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

1) climate change mitigation: 0.38%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

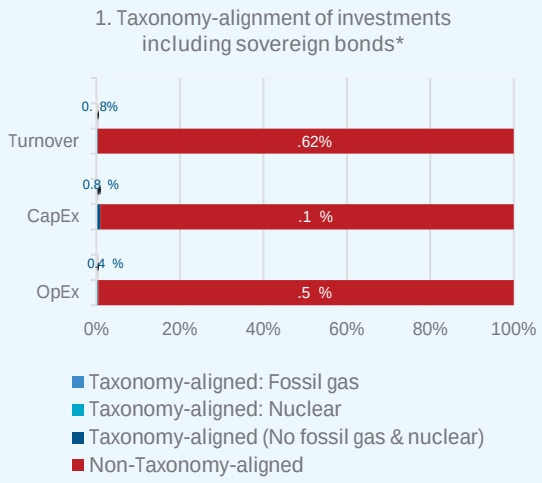
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

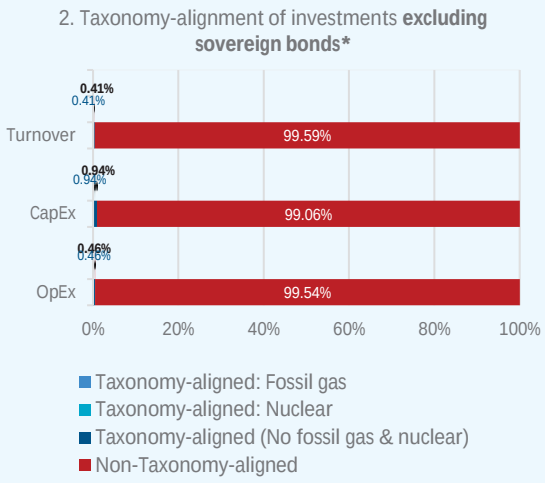
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 92.76% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Fidelity INTERNATIONAL

	Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
	Taxonomy-aligned (no fossil gas & nuclear)	0.38%	0.87%	0.43%
	Non taxonomy-aligned	99.62%	99.13%	99.57%

	Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
	Taxonomy-aligned (no fossil gas & nuclear)	0.41%	0.94%	0.46%
	Non taxonomy-aligned	99.59%	99.06%	99.54%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.26% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.69%	0.70%
Taxonomy aligned investments capex	1.16%	1.19%
Taxonomy aligned investments opex	0.79%	0.81%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 28.14%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 5.57%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the Fund's investment universe.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - STRATEGIC BOND FUND

Legal entity identifier: RL7DB442ZD11XPI58I79

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 0.00% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 6.8 vs.6.47

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	6.87 vs.6.73
% of Fund invested in securities with exposure to Exclusions	0.00%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

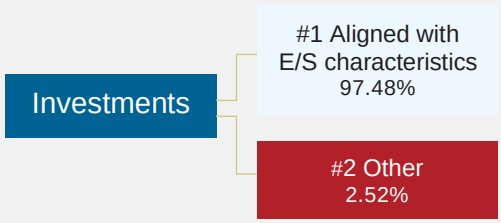
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 97.48%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.00%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control: 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

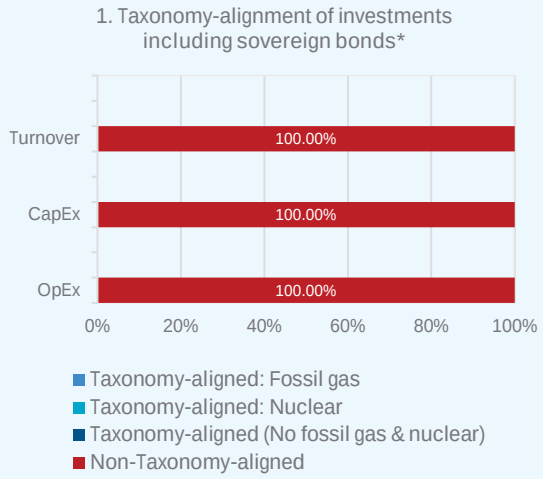
The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

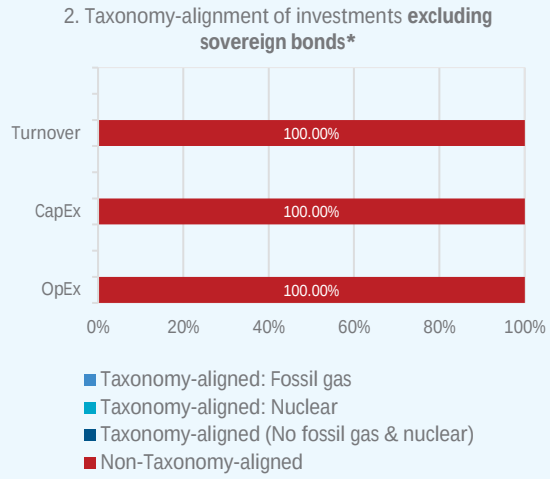
Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*

☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*



[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
-**capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
-**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 17.21% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.26%	0.40%
Taxonomy aligned investments capex	0.68%	1.05%
Taxonomy aligned investments opex	0.44%	0.67%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The Fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

Not Applicable

How did this financial product perform compared with the broad market index?

Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - STRUCTURED CREDIT INCOME FUND

Legal entity identifier: 254900PSXCPD7UYZ5904

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 0.00% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the Fund's investment universe. The investment universe comprised fixed and floating rate securitised investments backed by a variety of assets such as corporate loans.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the investment universe. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's investment universe using an either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the

How did the sustainability indicators perform?

environmental or social characteristics promoted by the financial product are attained.

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the ESG score of the Fund's portfolio measured against the ESG score of the Fund's investment universe: 4.67 vs.4.14

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of the fund's investment universe	4.7 vs.3.32
% of Fund invested in securities with exposure to Exclusions	0.00%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

Largest Investments	Sector	% Assets	Country

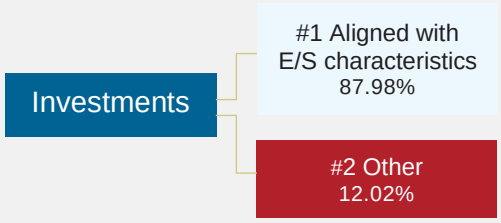
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 87.98%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its investment universe.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Subsector	% Assets
FINANCIALS	DIVERSIFIED FINANCIAL SERVICES	87.61 %
FINANCIALS	CONSUMER FINANCE	1.99 %
GOVERNMENT	CORPORATE BONDS	1.90 %
REAL ESTATE	REAL ESTATE INVESTMENT TRUSTS (REITS)	0.14 %

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.00%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

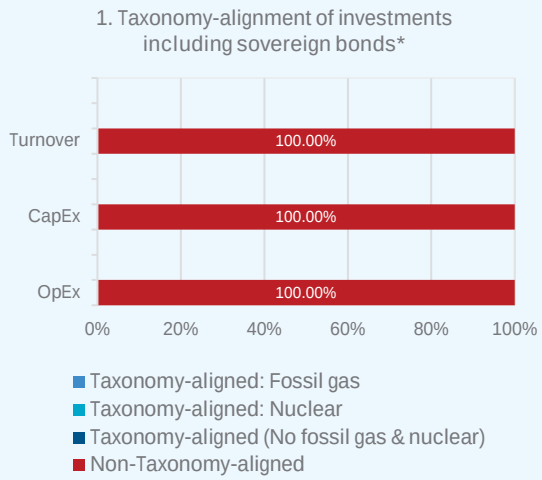
The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

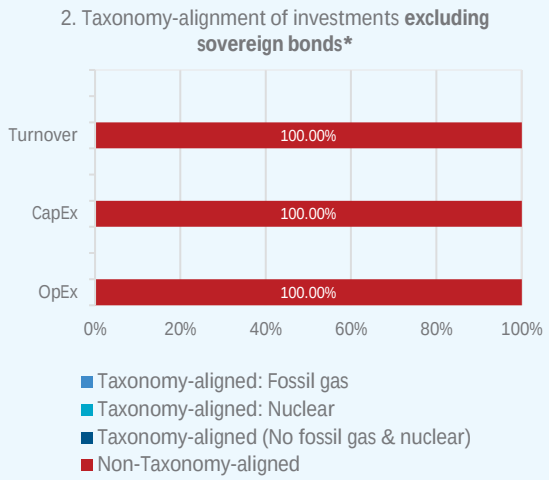
Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*

☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*



Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

This graph represents 99.75% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%

Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.00%	0.00%
Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.00%	0.00%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The Fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the Fund's investment universe.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - US DOLLAR BOND FUND

Legal entity identifier: 757QSNCIZ38KH0VOQ986

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 13.59% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

(i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 7.02 vs.6.84

(ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

During the reference period, an existing holding became subject to the exclusion policy following a change in the issuer's status. The position was subsequently divested in accordance with Fidelity's Exclusion Framework.

(iii) the percentage of the Fund invested in sustainable investments: 13.59%

(iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 7.36%

(v) the percentage of the Fund invested in sustainable investments with a social objective: 6.10%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	7.08 vs.6.83
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	16.16%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	9.71%
% invested in sustainable investments with a social objective	6.42%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 13.59% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The

investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

Largest Investments	Sector	% Assets	Country
USTN 4.25% 31/	GOVERNMENT	8.92 %	UNITED STATES
USTB 4.5% 15/11/2	GOVERNMENT	8.89 %	UNITED STATES

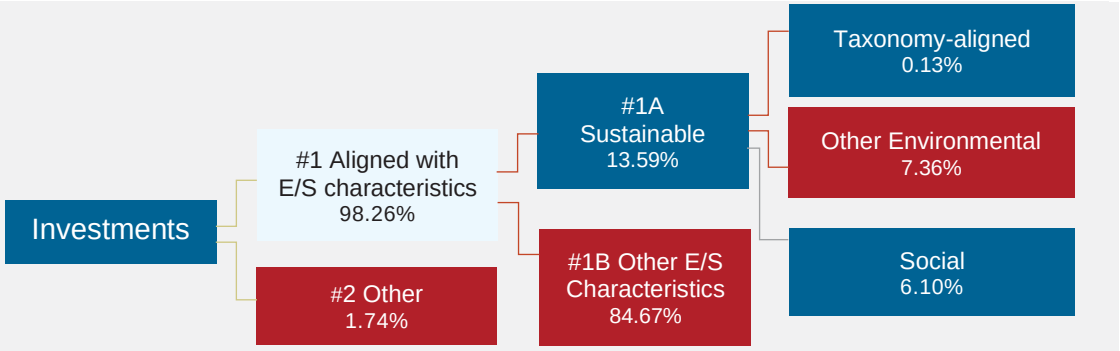
USTN 3.75% 31/	GOVERNMENT	2.35 %	UNITED STATES

Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 13.59% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.26%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 13.59% in sustainable investments of which 0.13% have an environmental objective (which is aligned with the EU Taxonomy) and 7.36% have an environmental objective (which is not aligned with the EU Taxonomy) and 6.10% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.13%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control: 0.00%

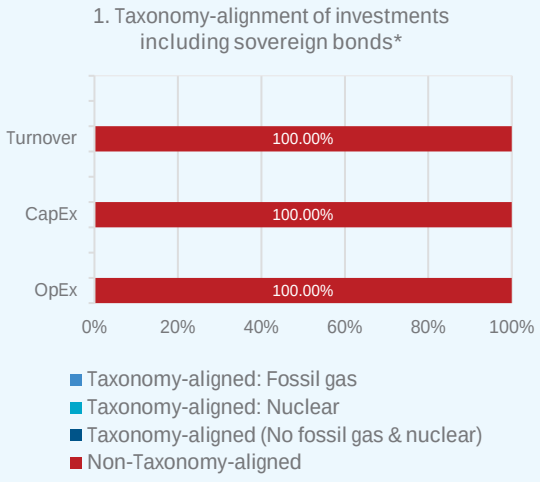
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

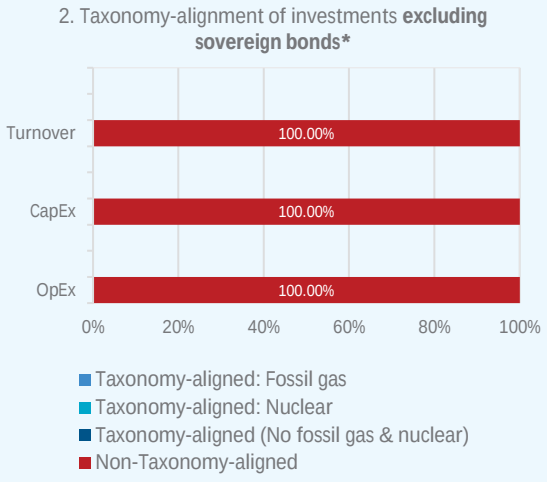
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 37.13% of the total investments.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.00%	0.00%
Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.00%	0.00%

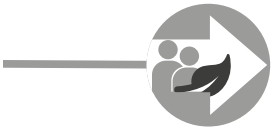
Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.36%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.



What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 6.10%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - US HIGH YIELD FUND

Legal entity identifier: 5493009BXYOCIRTXRS63

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 16.52% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 5.37 vs. 5.35

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 16.52%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 11.81%

v) the percentage of the Fund invested in sustainable investments with a social objective: 4.55%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	5.28 vs.5.22
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	14.39%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	10.57%
% invested in sustainable investments with a social objective	3.63%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 16.52% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

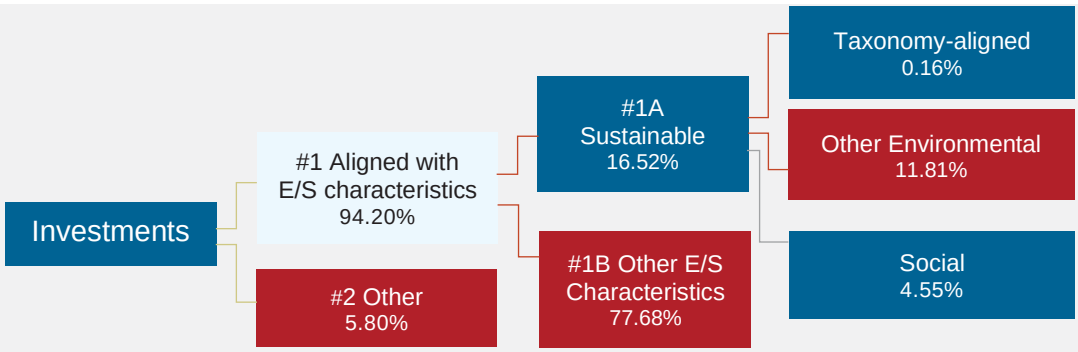
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 16.52% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 94.20%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 16.52% in sustainable investments of which 0.16% have an environmental objective (which is aligned with the EU Taxonomy) and 11.81% have an environmental objective (which is not aligned with the EU Taxonomy) and 4.55% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.16%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

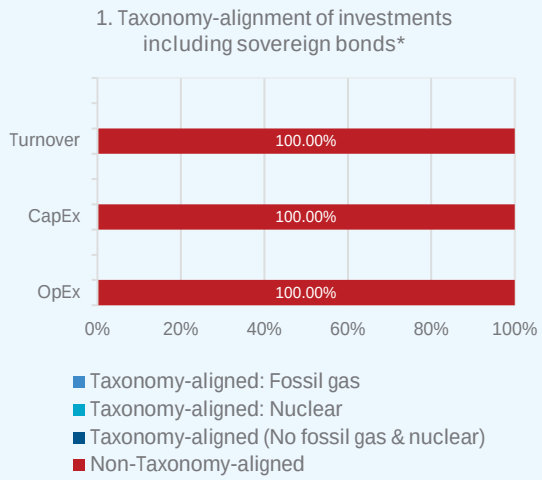
The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

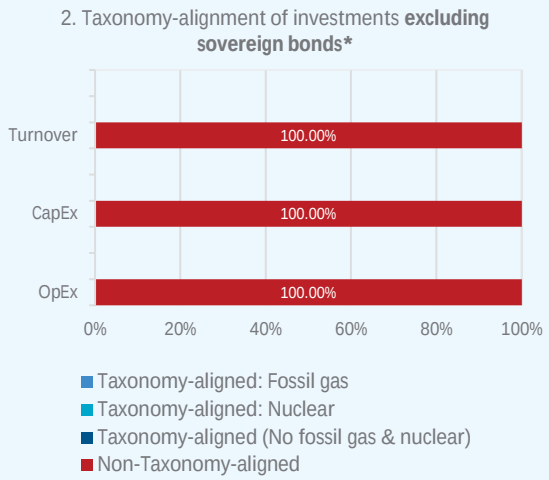
Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*

☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*



Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

This graph represents 95.06% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.00%	0.00%
Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.00%	0.00%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 11.81%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 4.55%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - EURO CASH FUND

Legal entity identifier: 54930085GQE5XBYYS267

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 0.00% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the Fund's investment universe. The investment universe comprised eligible issuers of short-dated debt.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the investment universe. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's investment universe using an either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the

How did the sustainability indicators perform?

environmental or social characteristics promoted by the financial product are attained.

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the ESG score of the Fund's portfolio measured against the ESG score of the Fund's investment universe: 6.76 vs.6.71

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
% of Fund invested in securities with exposure to Exclusions	0.00%
The ESG score of the Fund's portfolio measured against the ESG score of the fund's investment universe	6.94 vs.6.69

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

Largest Investments	Sector	% Assets	Country

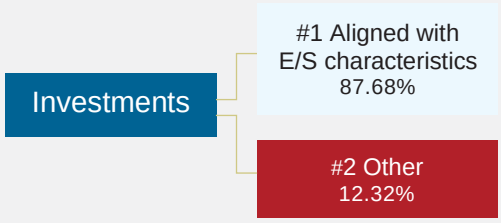
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 87.68%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its investment universe.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.00%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

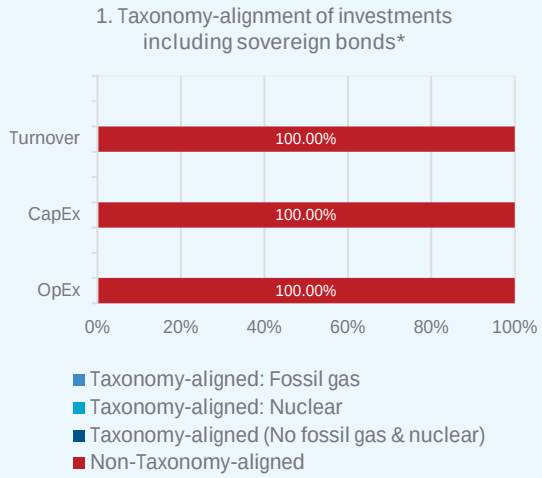
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

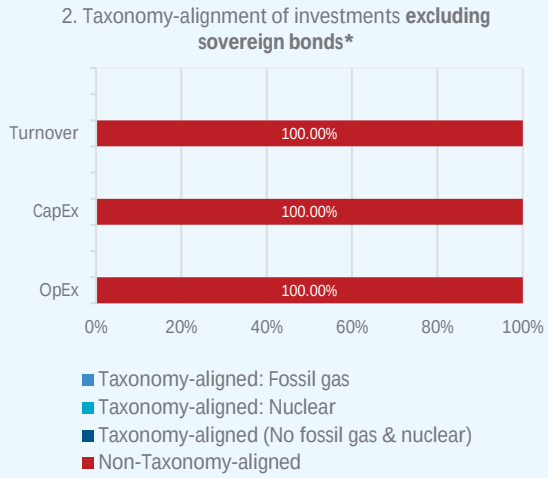
☐ *Yes:*

☐ *In fossil gas* ☐ *In nuclear energy*

☒ *No*



Taxonomy-aligned activities are expressed as a share of:



- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

-operational expenditure (OpEx) reflecting green operational activities of investee companies.

This graph represents 100.00% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments revenue	0.00%	0.00%
Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.00%	0.00%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The Fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the Fund's investment universe.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - US DOLLAR CASH FUND

Legal entity identifier: 549300VCV3WGOB2T4874

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 0.00% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☒ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period. The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the Fund's investment universe. The investment universe comprised eligible issuers of short-dated debt.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the investment universe. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's investment universe using an either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the

How did the sustainability indicators perform?

environmental or social characteristics promoted by the financial product are attained.

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the ESG score of the Fund's portfolio measured against the ESG score of the Fund's investment universe: 6.8 vs.6.71

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of the fund's investment universe	7.03 vs.6.69
% of Fund invested in securities with exposure to Exclusions	0.00%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

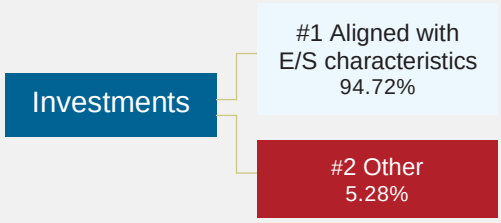
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund did not commit itself to having a minimum proportion of sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this Fund.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 94.72%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its investment universe.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Subsector	% Assets
FINANCIALS	COMMERCIAL BANKS	81.40 %
FINANCIALS	DIVERSIFIED FINANCIAL SERVICES	18.60 %
FINANCIALS	CAPITAL MARKETS	1.75 %
CONSUMER DISCRETIONARY	AUTOMOBILES	0.54 %
INDUSTRIALS	TRANSPORTATION INFRASTRUCTURE	0.48 %
GOVERNMENT	CORPORATE COMMERCIAL PAPER	0.35 %
FINANCIALS	CONSUMER FINANCE	0.10 %

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.00%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

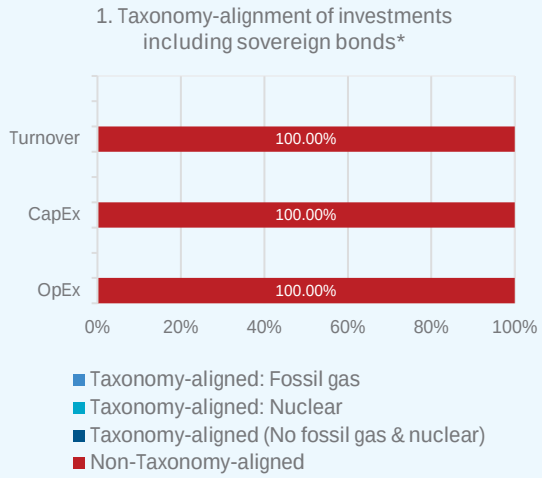
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

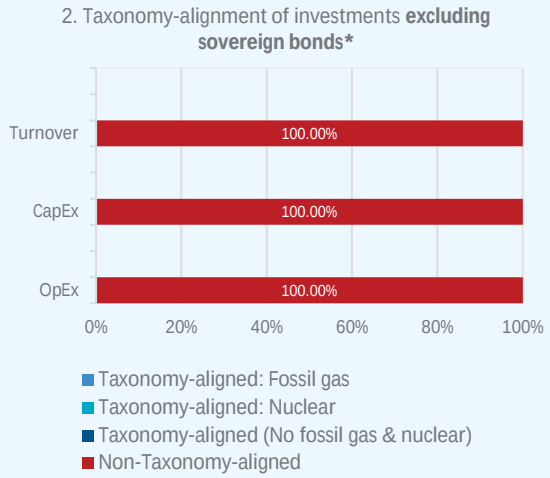
☐ *Yes:*

☐ *In fossil gas* ☐ *In nuclear energy*

☒ *No*



Taxonomy-aligned activities are expressed as a share of:



- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx)

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

reflecting green operational activities of investee companies.

This graph represents 100.00% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.00%	0.00%
Taxonomy aligned investments capex	0.00%	0.00%
Taxonomy aligned investments opex	0.00%	0.00%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The Fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the Fund did not have such commitment, it may have invested into this type of investments.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the Fund's investment universe.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - FIDELITY TARGET TM 2025 FUND

Legal entity identifier: 549300JQL1HZ76MV0M05

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 12.08% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the Fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the Fund's assets complied with the following:

• Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);

• Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;

• Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;

• Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria: 99.73%

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 12.08%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 10.75%

v) the percentage of the Fund invested in sustainable investments with a social objective:1.33%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria	99.76%
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	14.73%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	11.35%
% invested in sustainable investments with a social objective	3.10%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 12.08% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and

anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The Fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

(vi) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

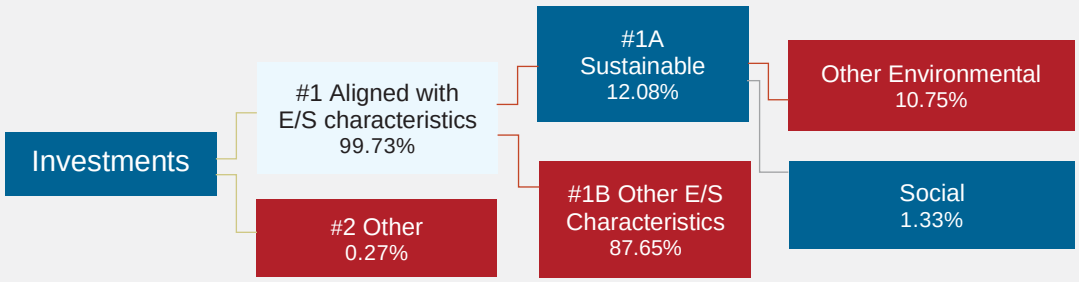
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 12.08% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.73%, which corresponds to the proportion of Fund complying with the Fidelity multi asset ESG criteria. This included 12.08% in sustainable investments of which 0.00% have an environmental objective (which is aligned with the EU Taxonomy) and 10.75% have an environmental objective (which is not aligned with the EU Taxonomy) and 1.33% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.00%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

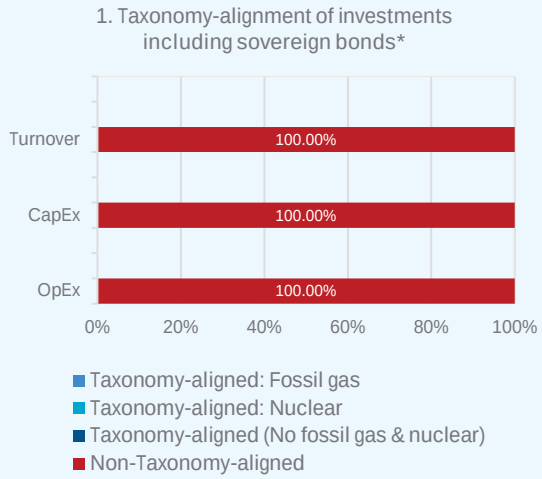
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

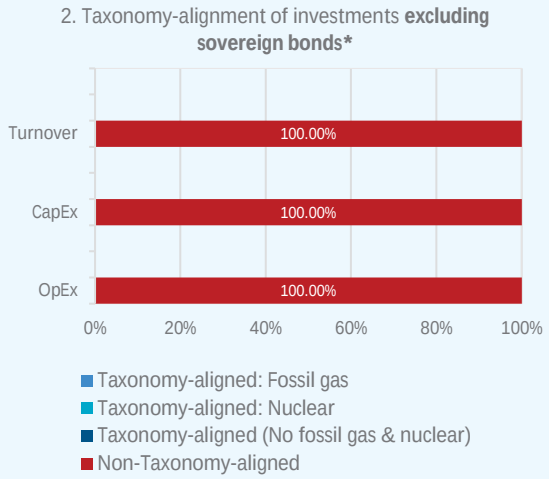
[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory

greenhouse gas emission levels corresponding to the best performance.

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 100.00% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.00%	0.00%
Non taxonomy-aligned	100.00%	100.00%	100.00%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30

note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.06%	0.09%
Taxonomy aligned investments capex	0.12%	0.17%
Taxonomy aligned investments opex	0.08%	0.12%

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 10.75%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 1.33%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - FIDELITY TARGET TM 2030 FUND

Legal entity identifier: 549300D1BVEZ3TH0BG02

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 33.79% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the Fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the Fund's assets complied with the following:

• Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);

• Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;

• Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;

• Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria: 97.14%

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 33.79%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 23.20%

v) the percentage of the Fund invested in sustainable investments with a social objective:10.21%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria	90.68%
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	34.80%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	21.12%
% invested in sustainable investments with a social objective	12.69%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 33.79% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and

anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The Fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

(vi) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

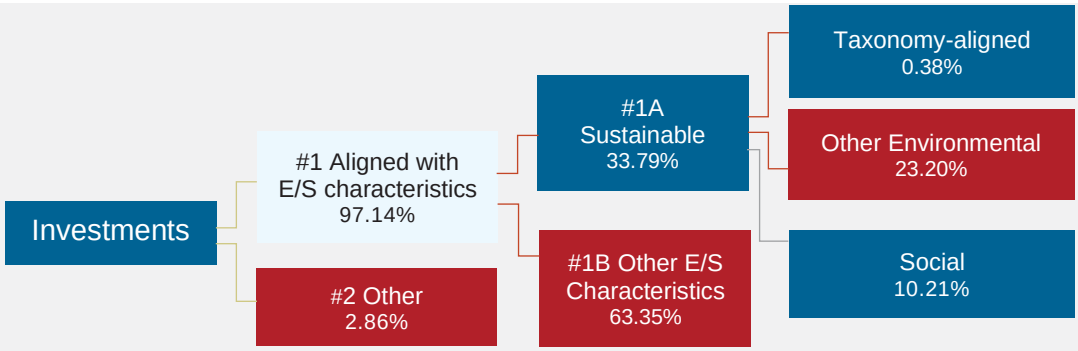
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 33.79% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 97.14%, which corresponds to the proportion of Fund complying with the Fidelity multi asset ESG criteria. This included 33.79% in sustainable investments of which 0.38% have an environmental objective (which is aligned with the EU Taxonomy) and 23.20% have an environmental objective (which is not aligned with the EU Taxonomy) and 10.21% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.38%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.09%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

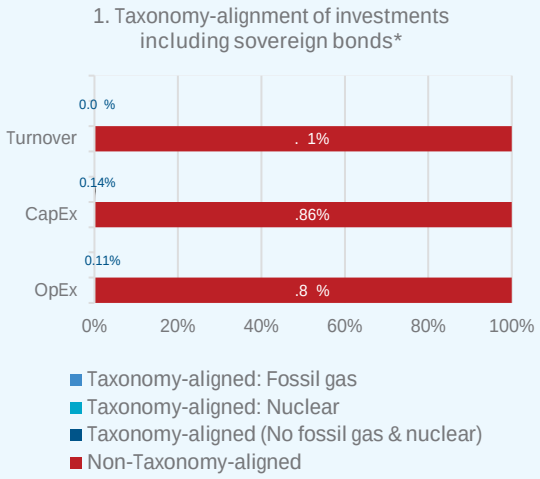
The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

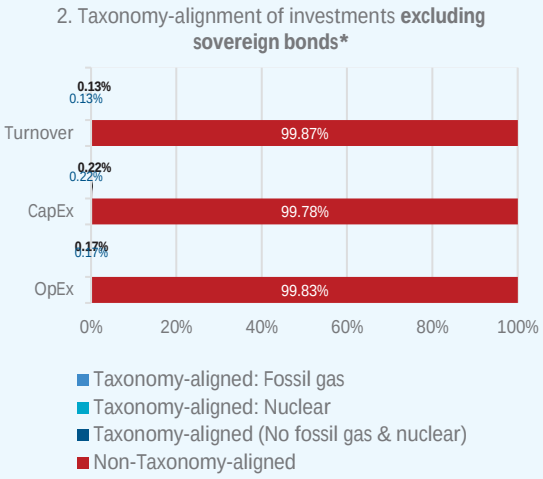
Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*

☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*



[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 67.93% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.09%	0.14%	0.11%
Non taxonomy-aligned	99.91%	99.86%	99.89%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.13%	0.22%	0.17%
Non taxonomy-aligned	99.87%	99.78%	99.83%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.08% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.13%	0.17%
Taxonomy aligned investments capex	0.17%	0.23%
Taxonomy aligned investments opex	0.14%	0.19%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 23.20%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 10.21%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

Not Applicable

How did this financial product perform compared with the broad market index?

Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - FIDELITY TARGET TM 2035 FUND

Legal entity identifier: 549300XULTNPDTV56Y50

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 61.17% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the Fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the Fund's assets complied with the following:

• Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);

• Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;

• Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;

• Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria: 98.18%

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 61.17%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 39.70%

v) the percentage of the Fund invested in sustainable investments with a social objective:21.06%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria	87.38%
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	55.34%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	32.88%
% invested in sustainable investments with a social objective	22.19%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 61.17% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and

anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The Fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

(vi) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

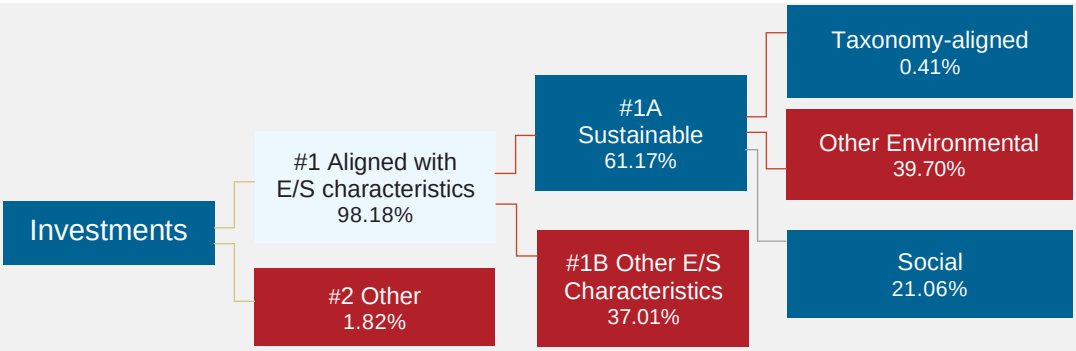
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 61.17% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.18%, which corresponds to the proportion of Fund complying with the Fidelity multi asset ESG criteria. This included 61.17% in sustainable investments of which 0.41% have an environmental objective (which is aligned with the EU Taxonomy) and 39.70% have an environmental objective (which is not aligned with the EU Taxonomy) and 21.06% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.41%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.08%

carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

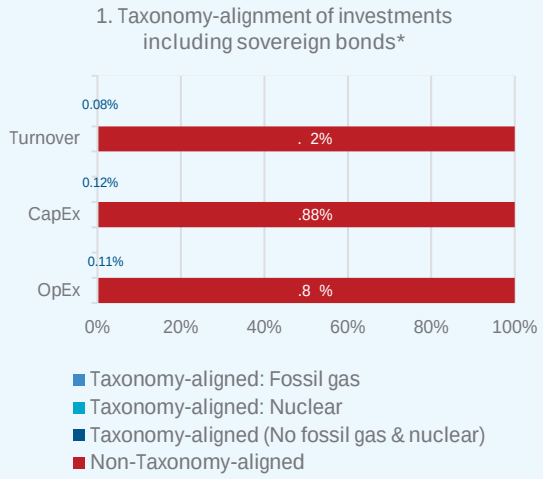
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

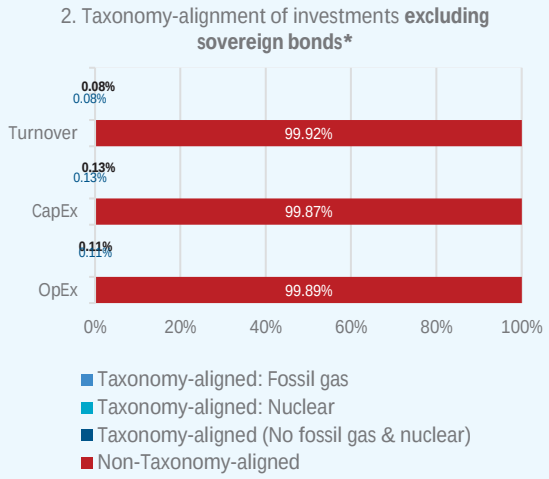
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 99.61% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

	Taxonomy-aligned (no fossil gas & nuclear)	0.08%	0.12%	0.11%
	Non taxonomy-aligned	99.92%	99.88%	99.89%

	Taxonomy-aligned (no fossil gas & nuclear)	0.08%	0.13%	0.11%
	Non taxonomy-aligned	99.92%	99.87%	99.89%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.07% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.17%	0.18%
Taxonomy aligned investments capex	0.19%	0.20%
Taxonomy aligned investments opex	0.15%	0.15%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 39.70%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 21.06%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - FIDELITY TARGET TM 2040 FUND

Legal entity identifier: 549300CNQ4TMHDVBVK47

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 61.48% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the Fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the Fund's assets complied with the following:

• Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);

• Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;

• Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;

• Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria: 98.18%

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 61.48%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 39.90%

v) the percentage of the Fund invested in sustainable investments with a social objective:21.17%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria	87.39%
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	55.35%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	32.88%
% invested in sustainable investments with a social objective	22.20%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 61.48% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and

anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The Fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

(vi) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

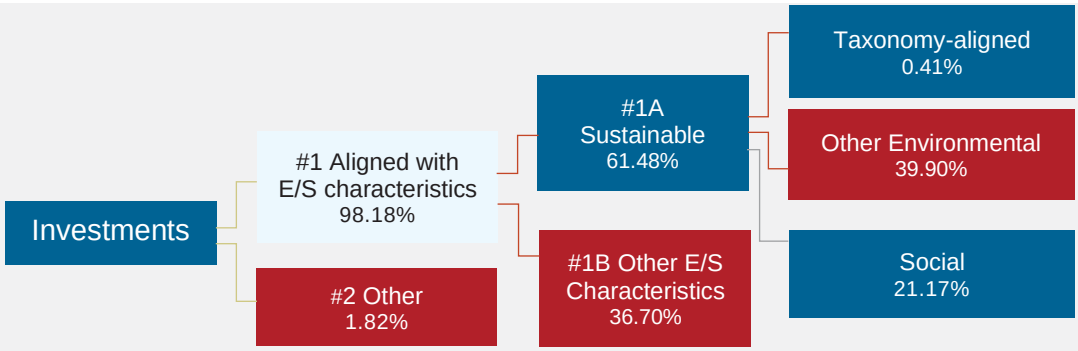
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 61.48% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.18%, which corresponds to the proportion of Fund complying with the Fidelity multi asset ESG criteria. This included 61.48% in sustainable investments of which 0.41% have an environmental objective (which is aligned with the EU Taxonomy) and 39.90% have an environmental objective (which is not aligned with the EU Taxonomy) and 21.17% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.41%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.08%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

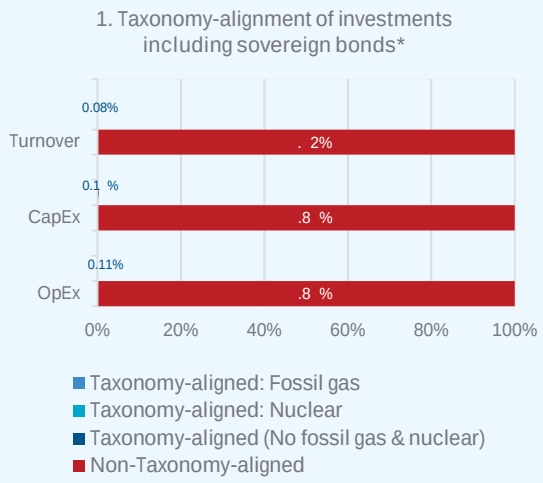
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

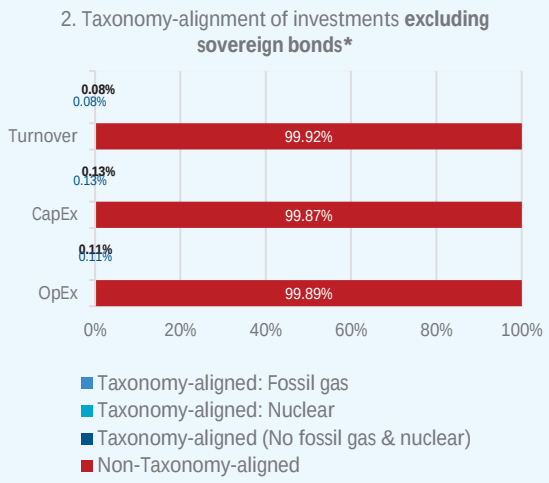
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?*

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 99.97% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.08%	0.13%	0.11%
Non taxonomy-aligned	99.92%	99.87%	99.89%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.08%	0.13%	0.11%
Non taxonomy-aligned	99.92%	99.87%	99.89%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.08% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.17%	0.18%
Taxonomy aligned investments capex	0.19%	0.20%
Taxonomy aligned investments opex	0.15%	0.15%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 39.90%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 21.17%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - FIDELITY TARGET TM 2045 FUND

Legal entity identifier: 549300Q8NRARUSN1XS58

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 61.46% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the Fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the Fund's assets complied with the following:

• Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);

• Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;

• Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;

• Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria: 98.15%

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 61.46%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 39.88%

v) the percentage of the Fund invested in sustainable investments with a social objective:21.17%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria	87.37%
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	55.35%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	32.88%
% invested in sustainable investments with a social objective	22.20%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 61.46% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and

anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The Fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

(vi) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country

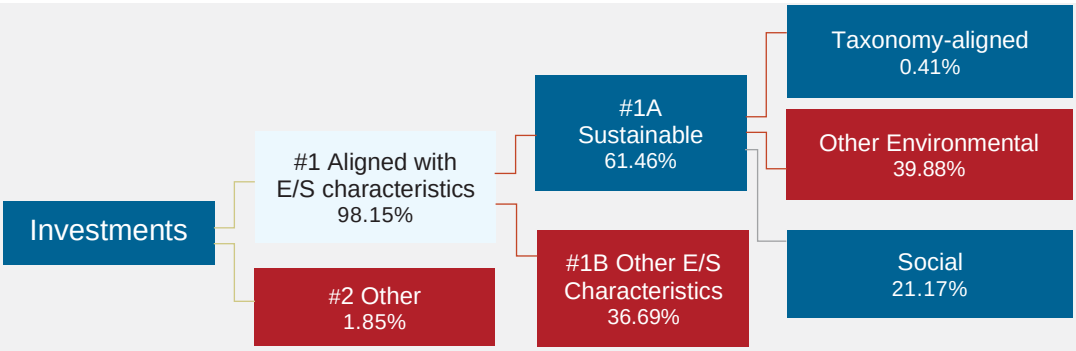
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 61.46% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.15%, which corresponds to the proportion of Fund complying with the Fidelity multi asset ESG criteria. This included 61.46% in sustainable investments of which 0.41% have an environmental objective (which is aligned with the EU Taxonomy) and 39.88% have an environmental objective (which is not aligned with the EU Taxonomy) and 21.17% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear**

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.41%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.08%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

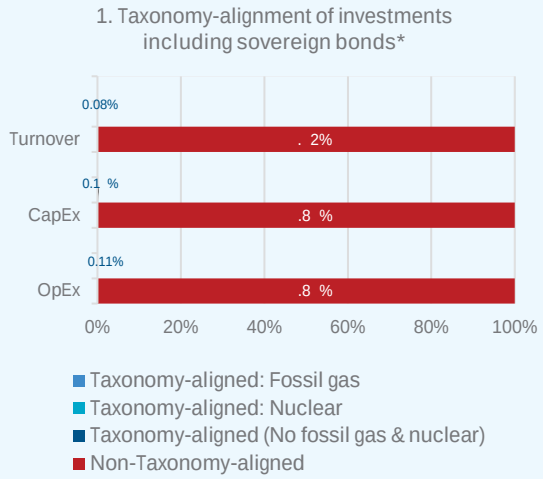
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

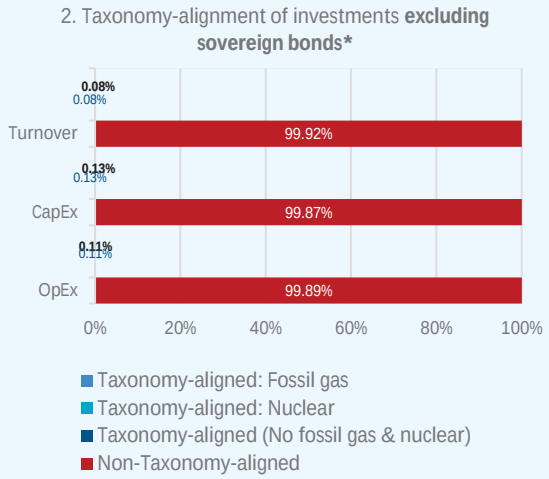
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 99.93% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.08%	0.13%	0.11%
Non taxonomy-aligned	99.92%	99.87%	99.89%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.08%	0.13%	0.11%
Non taxonomy-aligned	99.92%	99.87%	99.89%

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Fidelity INTERNATIONAL

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.08% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.17%	0.18%
Taxonomy aligned investments capex	0.19%	0.20%
Taxonomy aligned investments opex	0.15%	0.15%

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 39.88%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 21.17%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - FIDELITY TARGET TM 2050 FUND

Legal entity identifier: 549300J4YDP2CV913309

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 61.47% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the Fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the Fund's assets complied with the following:

• Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);

• Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;

• Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;

• Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria: 98.18%

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 61.47%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 39.89%

v) the percentage of the Fund invested in sustainable investments with a social objective:21.17%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria	87.37%
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	55.34%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	32.87%
% invested in sustainable investments with a social objective	22.20%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 61.47% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and

anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The Fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

(vi) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

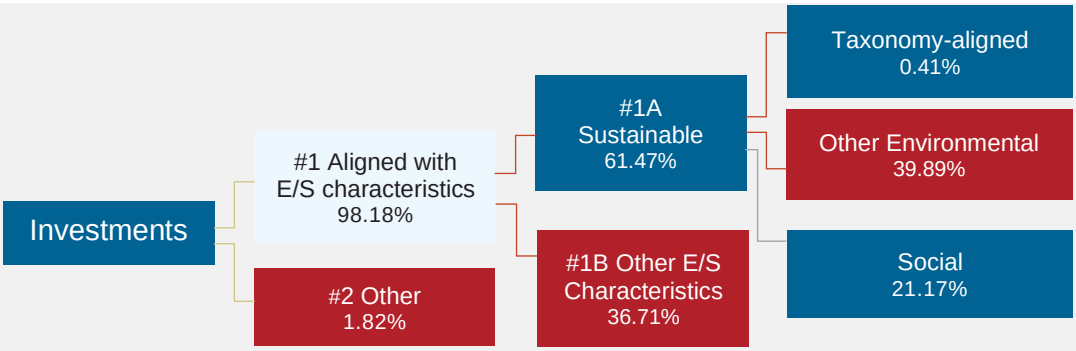
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 61.47% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.18%, which corresponds to the proportion of Fund complying with the Fidelity multi asset ESG criteria. This included 61.47% in sustainable investments of which 0.41% have an environmental objective (which is aligned with the EU Taxonomy) and 39.89% have an environmental objective (which is not aligned with the EU Taxonomy) and 21.17% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.41%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.08%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

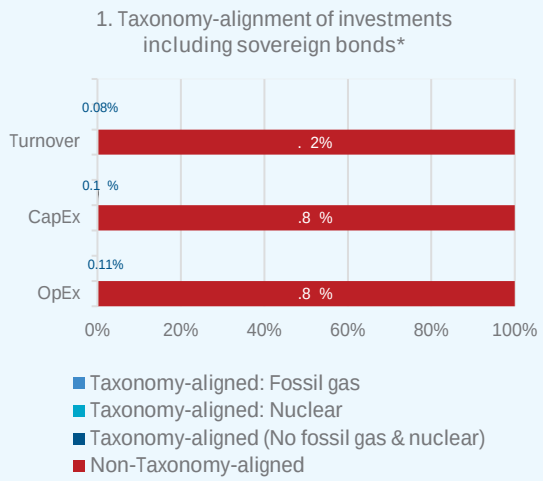
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

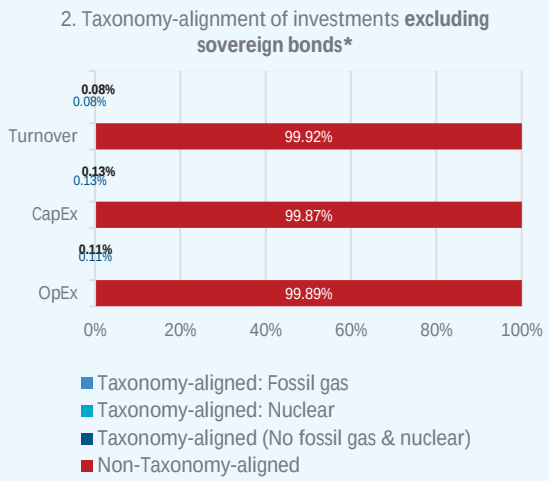
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?*

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 99.96% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.08%	0.13%	0.11%
Non taxonomy-aligned	99.92%	99.87%	99.89%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.08%	0.13%	0.11%
Non taxonomy-aligned	99.92%	99.87%	99.89%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.08% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.17%	0.18%
Taxonomy aligned investments capex	0.19%	0.20%
Taxonomy aligned investments opex	0.15%	0.15%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 39.89%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 21.17%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - FIDELITY TARGET TM 2055 FUND

Legal entity identifier: 254900MPPNN4DLXDKB92

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 61.47% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the Fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the Fund's assets complied with the following:

• Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);

• Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;

• Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;

• Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria: 98.19%

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 61.47%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 39.90%

v) the percentage of the Fund invested in sustainable investments with a social objective:21.16%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria	87.38%
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	55.32%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	32.87%
% invested in sustainable investments with a social objective	22.18%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 61.47% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and

anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The Fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

(vi) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

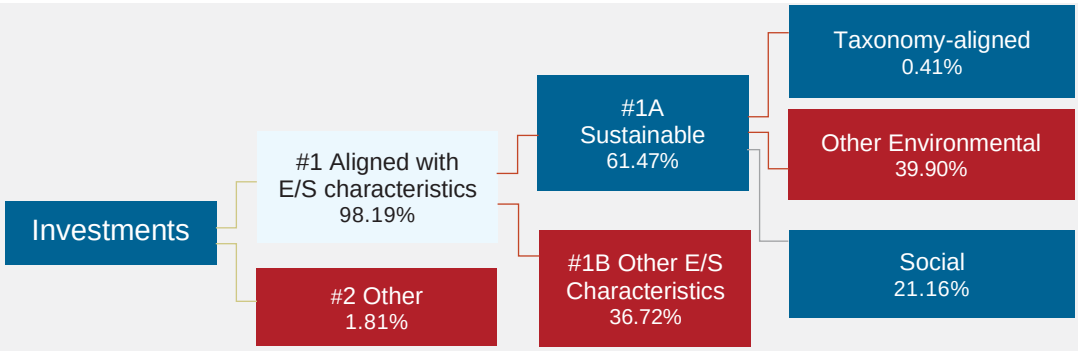
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 61.47% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.19%, which corresponds to the proportion of Fund complying with the Fidelity multi asset ESG criteria. This included 61.47% in sustainable investments of which 0.41% have an environmental objective (which is aligned with the EU Taxonomy) and 39.90% have an environmental objective (which is not aligned with the EU Taxonomy) and 21.16% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.41%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.08%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

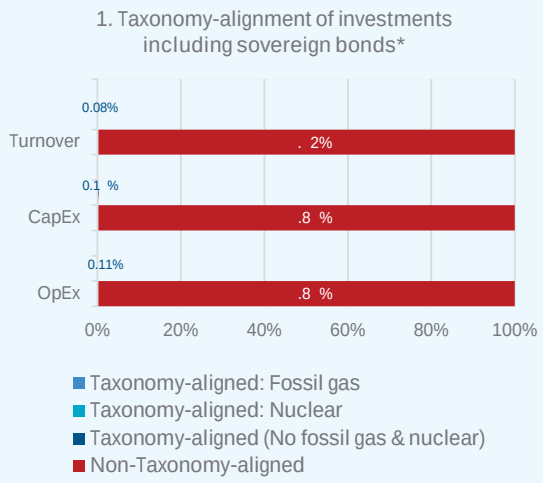
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

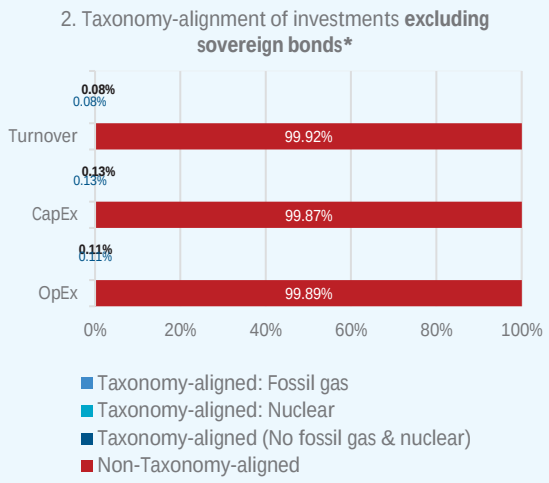
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?*

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 99.94% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.08%	0.13%	0.11%
Non taxonomy-aligned	99.92%	99.87%	99.89%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.08%	0.13%	0.11%
Non taxonomy-aligned	99.92%	99.87%	99.89%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.08% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.17%	0.18%
Taxonomy aligned investments capex	0.19%	0.20%
Taxonomy aligned investments opex	0.15%	0.15%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 39.90%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 21.16%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not Applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not Applicable

- *How did this financial product perform compared with the broad market index?*

  Not Applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - FIDELITY TARGET TM 2060 FUND

Legal entity identifier: 2549004RGYR26MYR1T34

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 61.46% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the Fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the Fund's assets complied with the following:

• Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);

• Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;

• Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;

• Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria: 98.18%

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 61.46%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 39.89%

v) the percentage of the Fund invested in sustainable investments with a social objective:21.16%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The percentage of the investments of the Fund which complies with the Fidelity multi asset ESG criteria	87.39%
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	55.32%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	32.87%
% invested in sustainable investments with a social objective	22.18%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 61.46% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and

anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The Fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

(vi) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

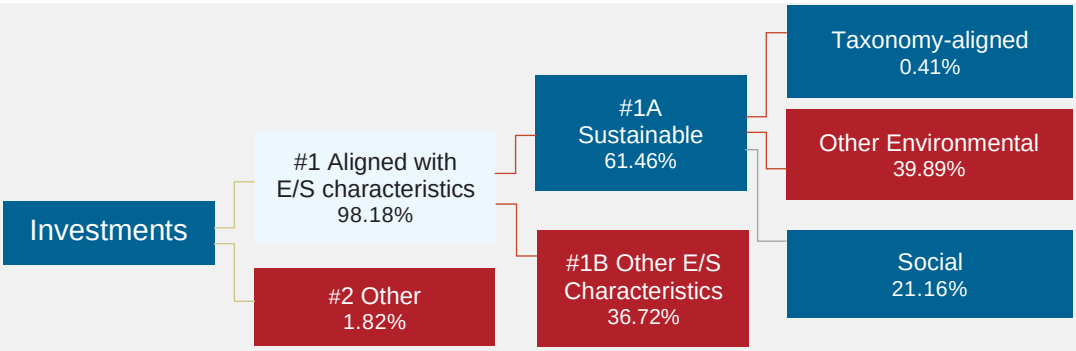
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 61.46% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.18%, which corresponds to the proportion of Fund complying with the Fidelity multi asset ESG criteria. This included 61.46% in sustainable investments of which 0.41% have an environmental objective (which is aligned with the EU Taxonomy) and 39.89% have an environmental objective (which is not aligned with the EU Taxonomy) and 21.16% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear**

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.41%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.08%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

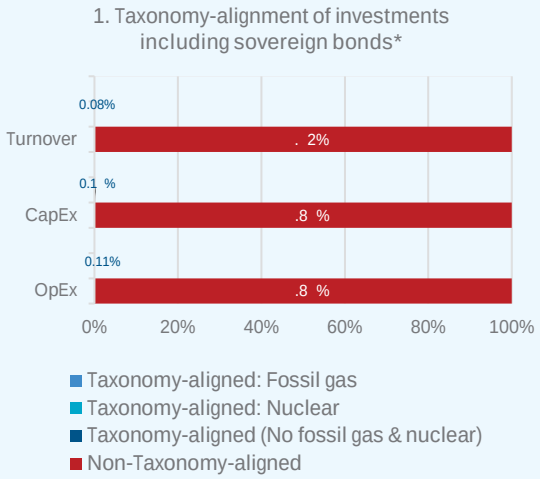
6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

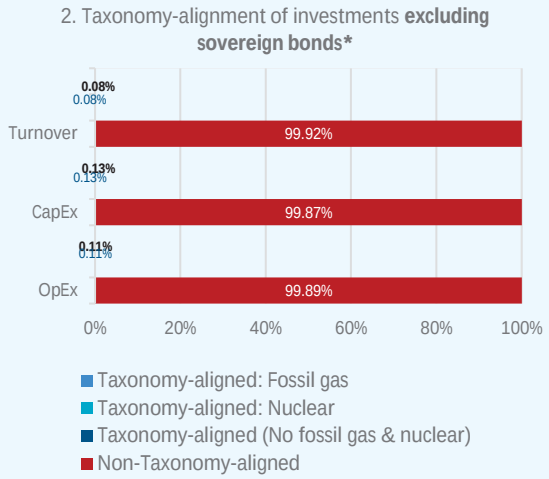
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*



☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 99.94% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.08%	0.13%	0.11%
Non taxonomy-aligned	99.92%	99.87%	99.89%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.08%	0.13%	0.11%
Non taxonomy-aligned	99.92%	99.87%	99.89%

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.08% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.17%	0.18%
Taxonomy aligned investments capex	0.19%	0.20%
Taxonomy aligned investments opex	0.15%	0.15%

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 39.89%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 21.16%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FIDELITY FUNDS - INSTITUTIONAL EMERGING MARKETS EQUITY FUND

Legal entity identifier: 549300APJHM18WNUFH86

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective**: ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 47.36% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective**: ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social

How did the sustainability indicators perform?

characteristics promoted by the financial product are attained.

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 6.86 vs. 6.72

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 47.36%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 34.09%

v) the percentage of the Fund invested in sustainable investments with a social objective: 13.27%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	7.01 vs.6.39
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	56.54%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	28.61%
% invested in sustainable investments with a social objective	27.93%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 47.36% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The

investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

Largest Investments	Sector	% Assets	Country
TAIWAN SEMICONDUCT MANUFACTURING	INFORMATION TECHNOLOGY	9.81 %	TAIWAN

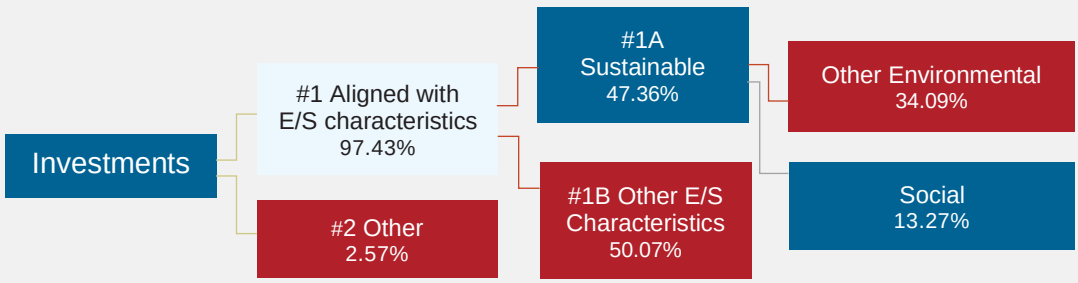
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 47.36% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 97.43%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 47.36% in sustainable investments of which 0.00% have an environmental objective (which is aligned with the EU Taxonomy) and 34.09% have an environmental objective (which is not aligned with the EU Taxonomy) and 13.27% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.00%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

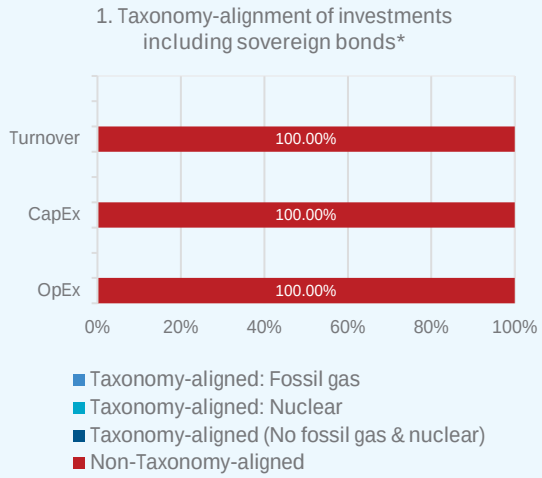
Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*

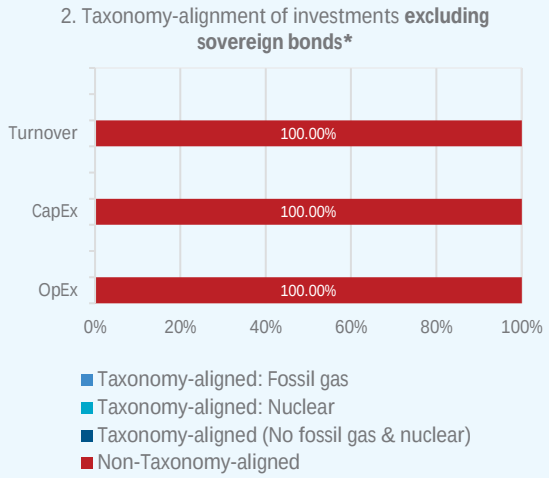
☐ *In fossil gas* ☐ *In nuclear energy*

☒ *No*

Taxonomy-aligned activities are expressed as a share of:



- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies,



The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

e.g. for a transition to a green economy.

-operational expenditure (OpEx) reflecting green operational activities of investee companies.

This graph represents 99.46% of the total investments.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the reference period.

The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

The ESG score was determined by reference to ESG ratings. These ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of benchmark. The weighted average ESG score of the Fund's portfolio was measured against the ESG score of the Fund's benchmark using a weighted average calculation. Further details on the calculation methodology are set out at Sustainable investing framework (fidelityinternational.com) and may be updated from time to time.

The Fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

The following data has been compiled based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted

How did the sustainability indicators perform?

For the reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

by the financial product are attained.

i) the ESG score of the Fund's portfolio measured against the ESG score of its benchmark: 7.5 vs. 7.04

ii) the percentage of the Fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the Fund invested in sustainable investments: 66.26%

iv) the percentage of the Fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 38.57%

v) the percentage of the Fund invested in sustainable investments with a social objective: 27.59%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

	Period ending 2025-04-30
The ESG score of the Fund's portfolio measured against the ESG score of its benchmark	7.48 vs.7.0
% of Fund invested in securities with exposure to Exclusions	0.00%
% invested in sustainable investments	69.46%
% invested in sustainable investments with environmental objective (economic activities not qualifying as environmentally sustainable under EU Taxonomy)	41.06%
% invested in sustainable investments with a social objective	28.25%

Due to a significant change in methodology in prior periods, sustainability indicators are only comparable from July 2024 onwards.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 66.26% of sustainable investments. The sustainable investments had an environmental and social objective.

The Fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's Fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens applied: Issuers identified as failing to behave in a way which meets their Fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

(i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.

(ii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.

(iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(iv) Quarterly reviews - discussion and review of principal adverse impacts through the Fund's quarterly review process.

(v) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "Sustainable investing framework".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2025-05-01 - 2026-04-30

Largest Investments	Sector	% Assets	Country
NVIDIA	INFORMATION TECHNOLOGY	5.60 %	UNITED STATES

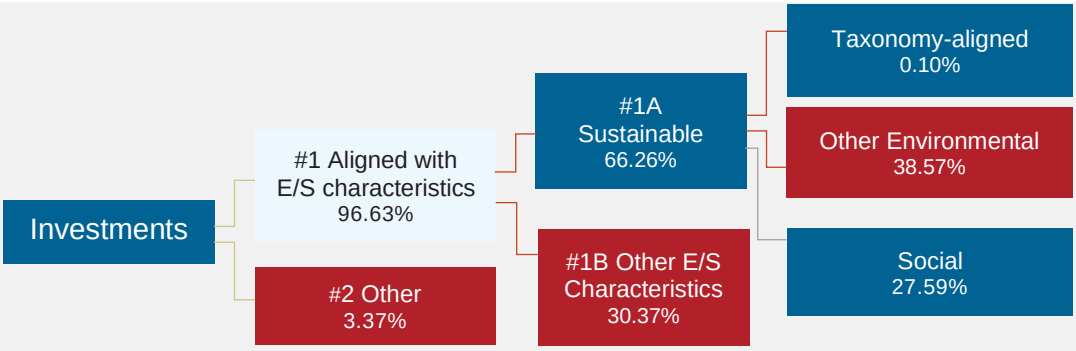
Source of data: Fidelity International

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

The Fund invested 66.26% in sustainable investments.



Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The proportion of the investments of the Fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 96.63%, which corresponds to the proportion of Fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 66.26% in sustainable investments of which 0.10% have an environmental objective (which is aligned with the EU Taxonomy) and 38.57% have an environmental objective (which is not aligned with the EU Taxonomy) and 27.59% have a social objective.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The Subcategory **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the quarterly average of data at the end of each quarter, aligned to the applicable reporting cycle of the Fund. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.10%. This contributed to the following environmental objectives:

1) climate change mitigation: 0.00%

2) climate change adaptation: 0.00%

3) protection of water and marine resources: 0.00%

4) transition to a circular economy: 0.00%

5) pollution prevention and control : 0.00%

6) protection and restoration of biodiversity and ecosystems: 0.00%

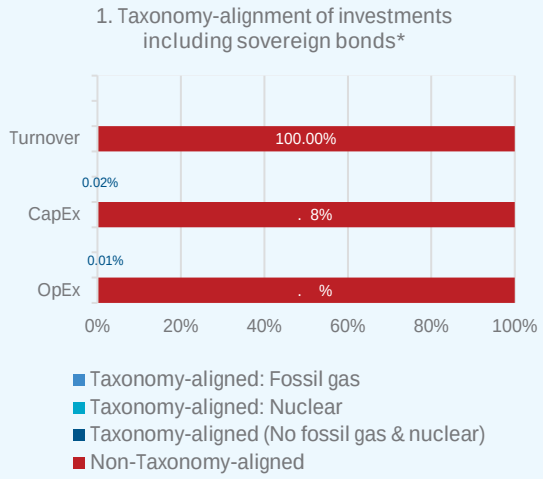
The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

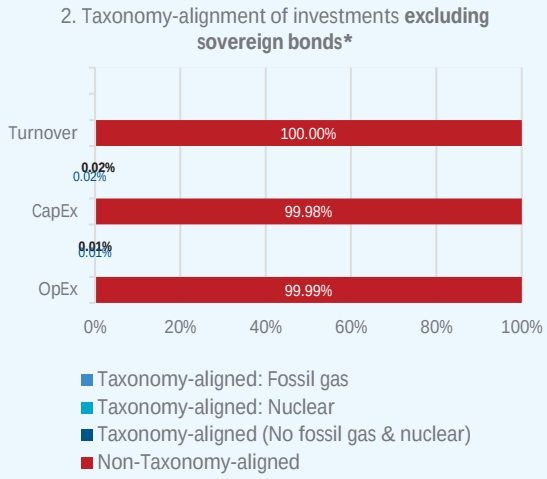
Did the financial product invest in fossil gas and/or nuclear energy related activities that complying with the EU Taxonomy[1]?

☐ *Yes:*

☐ *In fossil gas* ☐ *In nuclear energy*



☒ *No*



[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 100.00% of the total investments.

1. Taxonomy-alignment of investments **including sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.02%	0.01%
Non taxonomy-aligned	100.00%	99.98%	99.99%

2. Taxonomy-alignment of investments **excluding sovereign bonds***	TURNOVER	CAPEX	OPEX
Taxonomy-aligned : fossil gas	0.00%	0.00%	0.00%
Taxonomy-aligned : nuclear	0.00%	0.00%	0.00%
Taxonomy-aligned (no fossil gas & nuclear)	0.00%	0.02%	0.01%
Non taxonomy-aligned	100.00%	99.98%	99.99%

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Source of data: Moody's, quarterly average over the reference period.
The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Period ending 2025-04-30	
	Including sovereign bonds	Excluding sovereign bonds
Taxonomy aligned investments turnover	0.09%	0.09%
Taxonomy aligned investments capex	0.15%	0.15%
Taxonomy aligned investments opex	0.10%	0.10%

Due to a significant change in methodology in prior periods, EU Taxonomy alignment data is only comparable from July 2024 onwards.
The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

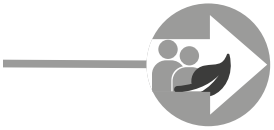
 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 38.57%.

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?



The quarterly average share of sustainable investments with a social objective was 27.59%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund took the following actions to meet the environmental or social characteristics:

- The Fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.
- Quarterly Sustainability Review to discuss and review the Fund's qualitative and quantitative environmental and social characteristics.
- The Fund has applied the Exclusions.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the Fund attains the environmental or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
